Who wants to change school science education and why? What mechanisms exist to effect change? What implications do they have for teachers' professionalism? These are the principal questions explored in this book. The authors focus on strategies for effecting change, including decentralized and statutory mechanisms, and the use of systems of assessment. The authors question the effectiveness of centralized programmes in improving the quality of students' science education. They suggest that this arises from a failure to acknowledge the contribution that the science teaching profession must make to reform. They argue that sustained and effective change, embodying improvements in standards, depends upon promoting the initiative.

Teaching Design and Technology in Secondary Schools Pearson Education South Asia

This Practice Book supports the existing and bestselling edition of IGCSE Chemistry Student's Book. - The perfect resource to use throughout the course to ensure you learn the topics and practise the content of the Cambridge IGCSE syllabus. - Contains a wealth of levelled

questions, including Stretch and Challenge for higher ability students. - Plenty of exam-style questions and actual exam questions from past Cambridge exam papers for exam success.

Teaching Design and Technology in Secondary Schools begins by providing information on the nature, purpose and development of design and technology in schools. An aptitude for design and technology combines practical skills and theoretical knowledge, and the book addresses what this means in practice. Design and technology takes in work with such diversity as resistant materials, textiles, food and systems and control, so attention is given to connections between these areas and what makes them 'design and technology'. Together, these articles comprise a stimulating and comprehensive overview of the issues and ideas surrounding this new, popular and exciting element of the secondary school curriculum. This book is the companion to Aspects of Teaching Secondary Design and Technology.

Education Book Guide Pearson Education South Asia

This book presents innovations in teaching and learning science, novel approaches to science curriculum, cultural and contextual factors in promoting science education and improving the standard and achievement of students in East Asian countries. The authors in this book discuss education reform and science curriculum changes and promotion of science and STEM education, parental roles and involvement in children's education, teacher preparation and professional development and research

Education Book Guide Pearson Education South Asia

This book presents innovations in teaching and learning science, novel approaches to science curriculum, cultural and contextual factors in promoting science education and improving the standard and achievement of students in East Asian countries. The authors in this book discuss education reform and science curriculum changes and promotion of science and STEM education, parental roles and involvement in children's education, teacher preparation and professional development and research

in science education in the context of international benchmarking tests to measure the knowledge of mathematics and science such as the Trends in Mathematics and Science Study (TIMSS) and achievement in science, mathematics and reading like Programme for International Student Assessment (PISA). Among the high achieving countries, the performance of the students in East Asian countries such as Singapore, Taiwan, Korea, Japan, Hong Kong and China (Shanghai) are notable. This book investigates the reasons why students from East Asian countries consistently claim the top places in each and every cycle of those study. It brings together prominent science educators and researchers from East Asia to share their experience and findings, reflection and vision on emerging trends, pedagogical innovations and research-informed practices in science education in the region. It provides insights into effective educational strategies and development

of science education to international readers.
