[Access to Scientific Research](#) International E Publication

An examination of the neighborhood transformation, gentrification, and displacement that accompany more compact development around transit. Cities and regions throughout the world are encouraging smarter growth patterns and expanding their transit systems to accommodate this growth, reduce greenhouse gas emissions, and satisfy new demands for mobility and accessibility. Yet despite a burgeoning literature and various policy interventions in recent decades, we still understand little about what happens to neighborhoods and residents with the development of transit systems and the trend toward more compact cities. Research has failed to determine why some neighborhoods change both physically and socially while others do not, and how race and class shape change in the twenty-first-century context of growing inequality. Drawing on novel methodological approaches, this book sheds new light on the question of who benefits and who loses from more compact development around new transit stations. Building on

data at multiple levels, it connects quantitative analysis on regional patterns with qualitative research through interviews, field observations, and photographic documentation in twelve different California neighborhoods. From the local to the regional to the global, Chapple and Loukaitou-Sideris examine the phenomena of neighborhood transformation, gentrification, and displacement not only through an empirical lens but also from theoretical and historical perspectives. Growing out of an in-depth research process that involved close collaboration with dozens of community groups, the book aims to respond to the needs of both advocates and policymakers for ideas that work in the trenches.

[Performing Dream Homes](#) Springer

Contemporary Regional Development in Africa interrogates well-known concerns in the areas of regionalism and economic integration in contemporary Africa, while offering an added uniqueness by highlighting the capacity imperatives of the issues, and proposing critical policy guideposts. The volume juxtaposes a set of 'dynamic' entanglements - new and micro-regionalism, informal cross-border trade, intra-African and African FDI plus cross-border investments, infrastructure development, science and technology, regional value-chains, conflict management and regional

security - with fluid interpretations of regional development. The chapters provide snapshots of the several emerging and complex regionalisms and highlight a set of relevant and often overlapping analyses - drawing on authors' nuanced and granular understanding of the African landscape. The varied, yet interlinked, nature of issues covered in this study make the book valuable and attractive to academics, researchers, policymakers and development practitioners.

Making Markets in Australian Agriculture Routledge

Dissatisfaction with the Gross Domestic Product (GDP) as an indicator of a country's development or a population's wellbeing led to the development of the Genuine Progress Indicator (GPI). The GPI is an aggregate index of over 20 economic, social and environmental indicators, and accounts for both the welfare benefits of economic growth, and the social and environmental costs which accompany that economic growth. The result is better information about the level of welfare or well-being of a country's population. This book measures the GPI of Hong Kong and Singapore from 1968 to 2010. It finds that for both countries, economic output (as measured by the GDP) has grown more than welfare (as measured by the GPI), but important differences are also found. In Hong Kong, the GPI has grown for the whole period under consideration, while in Singapore the GPI

has stalled from 1993. This is in line with most countries and is explained by the "threshold hypothesis" which states that beyond a certain level of economic development the benefits of further economic growth are outweighed by even higher environmental and social costs. The book argues that the growth of Hong Kong's GPI is due to its favourable relationship with China and in particular its ability to export low-wage jobs and polluting industries, rather than successful domestic policies. A stalling or shrinking GPI calls for alternative policies than the growth economy promoted by neoclassical economists, and the book explores an alternative model, that of the Steady State Economy (SSE).

The Public Wealth of Cities Routledge

Superb! How refreshing to see a Handbook that eschews convention and explores the richness and diversity of the geographical imagination in such stimulating and challenging ways. - Peter Dicken, University of Manchester "Stands out as an innovative and exciting contribution that exceeds the genre." - Sallie A. Marston, University of Arizona "Captures wonderfully the richness and complexity of the worlds that human beings inhabit... This is a stand-out among handbooks!" - Lily Kong, National University of Singapore "This wonderfully unconventional book demonstrates human geography's character and significance not by marching through traditional themes, but by presenting a set of geographical essays on basic ideas, practices, and concerns." - Alexander B. Murphy, University of Oregon "This SAGE Handbook stands out for its capacity to provoke the reader to think anew about human geography ... essays that offer some profoundly original insights into what it means to engage geographically with the world." - Eric Sheppard, UCLA Published in association with the journal *Progress in Human Geography*, edited and written by the principal scholars in the discipline, this Handbook demonstrates the difference that thinking about the world geographically makes. Each section considers how human geography shapes the world, interrogates it, and intervenes in it. It includes a major retrospective and prospective introductory essay, with three substantive sections on: Imagining Human Geographies Practising Human Geographies Living Human Geographies The Handbook also has an innovative multimedia component of conversations about key issues in human geography - as well as an overview of human geography from the Editors. A key reference for any scholar interested in questions about what difference it makes to think spatially or geographically about the world, this Handbook is a rich and textured statement about the geographical imagination.

Geographies of Developing Areas Routledge

This book is an initiative presented by the Commission on Geographical Education of the International Geographical Union. It focuses particularly on what has been learned from geospatial projects and research from the past decades of implementing geospatial technologies (GST) in formal and informal education. The objective of this publication is to inform an international audience of teachers, professionals, scholars, and policymakers about the state of the art and prospects of geospatial practices (GPs) as organized activities that use GST and lessons learned in relation to geographical education. GST make up an advanced body of knowledge developed by practitioners of geographic information systems (GIS), remote sensing (RS), global positioning systems, (GPS), and digital cartography (DC). GST have long been applied in many different sectors; however, their first use in higher education began in the early 1980s and then diffused to secondary schools during the 1990s. Starting with GIS and RS, it evolved into a much broader context, as GST expanded to include GPS and DC with new communication technologies and Internet applications. GST have been used around the world as a combination of tools and special techniques to make research, teaching, and learning more effective.

E-Business and Telecommunications Springer

Global value chains (GVCs) are a key feature of the global economy in the 21st century. They show how international investment and trade create cross-border production networks that link countries, firms and workers around the globe. This Handbook describes how GVCs arise and vary across industries and countries, and how they have evolved over time in response to economic and political forces. With chapters written by leading interdisciplinary scholars, the Handbook unpacks the key concepts of GVC governance and upgrading, and explores policy implications for advanced and developing economies alike. p.p1 {margin: 0.0px 0.0px 0.0px 0.0px; font: 10.0px Arial}

The Life Cycle of Clusters Routledge

A volume in the Remote Sensing Handbook series, Remotely Sensed Data Characterization, Classification, and Accuracies documents the scientific and methodological advances that have taken place during the last 50 years. The other two volumes in the series are Land Resources Monitoring, Modeling, and Mapping with Remote Sensing, and Remote Sensing of

WORLD'S ECONOMIC AND COMMERCIAL GEOGRAPHY Springer

Exploring the conceptual insights provided by the archipelagic 'twist' in the context of tourism principles, policies and practices, this volume draws on an international series of case studies to analyse best practice in branding, marketing and logistics in archipelago tourist destinations. The book asks and seeks to answer such questions as: How to 'sell' a multi-island destination, without risking a message that may be too complex and diffuse for audiences to grab on to? Does one encourage visitors to do 'island hopping'; and, if so, how and with what logistic facilities? How does one ascribe specific island destinations within an overall archipelago brand? Would smaller islands rebel against a composite branding strategy that actually benefits other islands? How does one read or craft transport policies as a function of the 'reterritorialisation' of a multi-island space? This book pioneers the exploration of the archipelago as tourism study focus (and not just locus); a heuristic device for rendering islands as sites of different tourism practices, industries and policies, but also of challenges and possibilities.

Transdisciplinary Research and Practice for Sustainability Outcomes Routledge

This book explains what 'small' states are and explores their current security challenges, in general terms and through specific examples. It reflects the shift from traditional security definitions emphasizing defence and armaments, to new security concerns such as economic, societal and environmental security where institutional cooperation looms larger. These complex issues, linked with traditional power relations and new types of actors, need to be tackled with due regard to democracy and good governance. Key policy challenges for small states are examined and applied in the regional case studies. The book deals mainly with the current experience and recent past of such states but also offers insights for their future policies. Although many of the states covered are European, the study also includes African, Caribbean and Asian small states. Their particular interest and relevance is outlined, as is the connection between their security challenges and their smallness. Policy lessons for other states are then sought. The book is the first in-depth, multi-continent study of security as an aspect of small state governance today. It is novel in placing the security dilemmas of small states in the context of wider ideas on international and institutional change, and in dealing with non-European states and regions.

Human Geography Edward Elgar Publishing

The International Science Congress Association organized the 2nd International Science Congress (ISC-2012) with 'Science and Technology - Challenges of 21st Century' as its focal theme. ISC-2012 was divided in 20 sections. A total number of 800 Research Papers and 1200 registrations from 23 countries all over the world have been received. They were mainly from Bangladesh, Bulgariya, Cameroun, France, Greece, Iran, Iraq, Kazakhstan, Korea, Lithuania, Malaysia, Nigeria, Nepal, Phillipines, Pakistan, Poland, Romania, Slovakiya, USA, Ukraine, Venezuela, Turkey and India.

Transnational Lives in China Routledge

The debate about access to scientific research raises questions about the current effectiveness of scholarly communication processes. This book explores, from an independent point of view, the current state of the STM publishing market, new publishing technologies and business models as well as the information habit of researchers, the politics of research funders, and the demand for scientific research as a public good. The book also investigates the democratisation of science including how the information needs of knowledge workers outside academia can be embraced in future.

Queering Fat Embodiment SAGE

WORLD'S ECONOMIC AND COMMERCIAL GEOGRAPHY Lulu.com Research and Debate in Primary Geography Routledge

The Political Economy of City Branding Oxford University Press - Children

The clothing industry provides employment for 60 million workers worldwide. More than a quarter of these workers are employed in the Asia-Pacific region, where the industry is based on subcontracted production on behalf of international buyers. Rapid movements of manufacturing activity from country to country in search of cost advantages make clothing workers part of a globalizing labour market where they increasingly suffer from job insecurity. This book presents carefully researched case studies which highlight the ways in which labour is informalized, fragmented and made disposable by the globalization of production. Chapters address issues pertaining to rights and citizenship, and new forms of activism and organization in conjunction and coordination with diverse support groups, consumers, and wider global campaigns. Contributors further examine the role of the nation state, government regulatory bodies, as well as independent monitoring systems such as the International Labour Organization. Although there has been

considerable effort directed to understanding how firms operate across multiple countries - in studies of the organization of global production networks, and the implications for complexities of scale, (de)territorialization and state development projects - there has been far less focus on how these processes produce precarious labour and reshape worker consciousness. Offering new insights into the understanding and support of workers in the global textile and garment industry, this book will be of interest to academics in a variety of disciplines including Asian Studies, sociology, political economy, development, human rights, labour and gender.

Global Land Grabs Routledge

This book constitutes the refereed proceedings of the 14th International Joint Conference on E-Business and Telecommunications, ICETE 2017, held in Madrid, Spain, in July 2017. ICETE is a joint international conference integrating four major areas of knowledge that are divided into six corresponding conferences: International Conference on Data Communication Networking, DCNET; International Conference on E-Business, ICE-B; International Conference on Optical Communication Systems, OPTICS; International Conference on Security and Cryptography, SECRIPT; International Conference on Signal Processing and Multimedia, SIGMAP; International Conference on Wireless Information Systems, WINSYS. The 17 full papers presented were carefully reviewed and selected from 195 submissions. The papers cover the following key areas of information and communication technologies, including data communication and networking, e-business and telecommunications: data communication networking; e-business; optical communication systems; security and cryptography; signal processing and multimedia applications; wireless networks and mobile systems.

Shaping Knowledge Edward Elgar Publishing

Which public and whose space? The understanding of public space as an arena where individuals can claim full use and access hides a reality of constant negotiation, conflict and surveillance. This collection uses case studies concerning the management, use, and transgression of public space to invite reflection on the way in which everyday social interaction is framed and shaped by the physical environment and vice versa. International experts from fields including geography, criminology, sociology and urban studies come together to debate the concepts of order and conflict in public space. This book is divided into two parts: spaces of control, and spaces of transgression. Section I focuses on formal and informal surveillance and the politics of control, using case studies to compare strategies in spaces including Olympic cities, luxury skyscrapers, residential neighbourhoods and shopping malls. Section II focuses on transgressive or deviant behaviour in public spaces, with case studies examining behaviour in nightlife districts, governance of homelessness, boy-racer culture and abortion protests. The epilogue concludes the book with an exploration of possible future avenues for research on public space, and a critical appraisal of the concept of public space itself. This interdisciplinary collection will be of interest to students, researchers and professionals in the areas of criminology, sociology, surveillance studies, human and social geography, and urban studies and planning.

The Routledge Handbook of Environment and Communication Routledge

When we walk into a gallery, we have a fairly good idea where the building begins and ends; and inside, while observing a painting, we are equally confident in distinguishing between the painting-proper and its frame and borders. Yet, things are often more complicated. A building defines an exterior space just as much as an interior, and what we perceive to be ornamental and marginal to a given painting may in fact be central to what it represents. In this volume, a simple question is presented: instead of dichotomous separations between inside and outside, or exterior and interior, what other relationships can we think of? The first book of its kind to grapple with this question, *Inside/Outside Islamic Art and Architecture* focuses on a wide spectrum of mediums and topics, including painted manuscripts, objects, architectural decoration, architecture and urban planning, and photography. Bringing together scholars with diverse methodologies who work on a geographical span stretching from India to Spain and Nigeria, and across a temporal spectrum from the thirteenth to the twenty-first century - this original book also poses engaging questions about the boundaries of the field.

Transit-Oriented Displacement or Community Dividends? Brookings Institution Press

The role of cities in addressing climate change is increasingly recognised in international arenas, including the Sustainable Development Goals, the UN Framework Convention on Climate Change, and the New Urban Agenda. Asia is home to many of the countries that are most vulnerable to climate change impacts and, along with Africa, will be the site of most urban population growth over the coming decades. Bringing together a range of city experiences, Responding to Climate

Change in Asian Cities provides valuable insights into how cities can overcome some of the barriers to building climate resilience, including addressing the needs of vulnerable populations. The chapters are centred on an overarching understanding that adaptive urban governance is necessary for climate resilience. This requires engaging with different actors to take into account their experiences, vulnerabilities and priorities; building knowledge, including collecting and using appropriate evidence; and understanding the institutions shaping interactions between actors, from the national to the local level. The chapters draw on a mix of research methodologies, demonstrating the variety of approaches to understanding and building urban resilience that can be applied in urban settings. Bringing together a range of expert contributors, this book will be of great interest to scholars of urban studies, sustainability and environmental studies, development studies and Asian studies.

Managing the Middle-Income Transition Springer

This Handbook brings together scholars from around the world in addressing the global significance of, controversies over and alternatives to intellectual property (IP) today. It brings together over fifty of the leading authors in this field across the spectrum of academic disciplines,

from law, economics, geography, sociology, politics and anthropology. This volume addresses the full spectrum of IP issues including copyright, patent, trademarks and trade secrets, as well as parallel rights and novel applications. In addition to addressing the role of IP in an increasingly information based and globalized economy and culture, it also challenges the utility and viability of IP today and addresses a range of alternative futures.

Incomplete Streets Springer

A student-friendly and engaging resource for the 2016 Edexcel GCSE Geography B specification, this brand new course is written to match the demands of the specification. As well as providing thorough and rigorous coverage of the spec, this book is designed to engage students in their learning and to motivate them to progress.

Handbook on Global Value Chains Lulu.com

This book brings together research working at the boundary between design knowledges and mobilities, offering a novel collection for both theorists and practitioners. Drawing upon detailed case studies, it demonstrates the diverse roles of design in shaping mobility at different spaces

and scales: across cities; within different types of buildings and infrastructures; and through commuting, work and leisure activities. A range of international scholars illustrate the designed mobilities of car parks, traffic lights, street benches, pedestrian wayfinding systems and accessible design in the urban environment; they examine spaces within hospitals, airports and train stations and investigate design practices for bicycles, future urban vehicles and MotoGP motorcycle racing. Other contributions explore overlooked mobile artefacts such as television and video game remote controls, 3D printing and the types of packaging which enable objects themselves to move around. This book demonstrates how the tools, assumptions and processes of design shape spaces of mobility, and also illuminates how shifts in the fluidity and circulation of people, practices and materials in turn reconfigure practices of design. Mobilising Design develops multi-disciplinary understandings of design, drawing upon diverse literatures including design history, product design, architecture and cultural geography. By highlighting often invisible artefacts and associated knowledges and controversies, the book foregrounds the taken-for-granted ways in which everyday mobility is designed. It will be of interest to scholars in geography, sociology, economic history, architecture, design and urban theory.
