### **Nephrology and Hypertension Board Review** CRC Press

The first exam prep book to cover all of the most commonly tested rotations, The PA Rotation Exam Review, 2nd Edition, delivers a high-yield review in a concise, full-color format to help you make the most of your preparation for the "high yield" topics on clinical rotation exams and boost your test-taking confidence. Up-to-date coverage details essential material in Internal Medicine, Family Medicine, Pediatrics, Emergency Medicine, Psychiatry, OB/GYN, and Surgery, accompanied by 25 practice questions—with an additional 50 available online—for each rotation. Reflecting an enhanced organization, expanded images, helpful mnemonic tools, and an inclusive focus throughout, this updated 2nd Edition offers everything you need to prepare for success on test day and take a confident next step toward your career as a physician assistant.

### **Oculoplasty for Ophthalmologists** Slack

Drs. Gimbel and Penno provide a comprehensive look at a wide variety of refractive surgery techniques in their new book. Specific techniques are discussed along with preoperative assessments, counseling, and informed consent. In addition to chapters on the commonly performed techniques of LASIK and PRK, there are chapters on intracorneal ring segments, phakic IOL implants, refractive lensectomy, and retreatments. The authors take a

practical and concise approach to a wide scope of modern refractive surgery techniques which makes this reference valuable for both the experienced and beginning surgeon. Patient examples are featured illustrating the fundamental principles of assessment and choosing the appropriate refractive surgery technique for an individual patient. The inclusion of co-management principles emphasizes integrated care during the assessment and preoperative work-up, as well as during the postoperative period. This book is an important source that covers many refractive surgery approaches to help you choose the best procedure for your patients and achieve the best results possible.

**Diagnostic Procedures in Ophthalmology** Lippincott Williams & Wilkins

Leda, a retired American physician, joins her friend Aliyah to work in a refugee camp in the Middle East despite warnings from her husband. After observing conditions under Israeli control she becomes overpowered by a sense of injustice. Talib, a younger, handsome Egyptian physician seduces her and begs her to be an avenging angel for his downtrodden people. Her psychological turmoil plays out in Arizona, Florida and Maine. Her plans include lavish fundraisers at her estate in Connecticut, ingratiating herself into the highest levels of government in Washington DC. In Paris she concludes her plans for terror in Manhattan. The fate of an unlikely terrorist reveals itself in Leda's psychological choices to sacrifice everything for the good of the Palestinian people.

**Comprehensive Review in Clinical Neurology** Lippincott Williams & Wilkins

The history taking and communication skill stations are amongst the most difficult postgraduate examinations, where candidates more commonly fail due to an inability to communicate properly with the patient, rather than due to lack of knowledge. Authored by experienced postgraduate examiners, this book offers students a wealth of real-life scenarios in multi-conversational styles, using a seven-step approach to help them understand the questions and provide clear and succinct answers. The scenarios are similar to those most frequently encountered in examinations and the model answers are in a typical style expected between doctor and patient, also taking into account candidates for whom English may not be their first language. The comprehensive text is enhanced by illustrations and figures to assist learning and will be useful not only to candidates preparing for postgraduate clinical examinations, but also to undergraduate students. Key points Provides real-life, conversational-style scenarios between doctor and patient to help students prepare for postgraduate history taking and communication skill examinations Uses a seven-step approach to help postgraduates understand questions and provide clear and succinct answers Scenarios typical of those used in examinations Authored by experienced postgraduate examiners

**Walsh and Hoyt's Clinical Neuro-ophthalmology** Lippincott Williams & Wilkins

Blueprints Neurology provides students with a complete review of the key topics and concepts—perfect for clerkship rotations and the USMLE. The fourth edition includes new diagnostic and treatment information, an updated appendix of evidence-based resources, and a question bank at the end of the book.

*Clinical Scenarios in Surgery: Decision Making and Operative Technique* presents 125 cases in all areas of general surgery: GI, breast, hepatobiliary, colorectal, cardiothoracic, endocrine, vascular, trauma, pediatric, critical care, and transplant. Each full-color case begins with a patient presentation and proceeds through differential diagnosis, diagnosis and treatment, surgical procedures, postoperative management, and a case conclusion. Each case includes key technical steps, potential pitfalls, take-home points, and suggested readings. The patient stories in these clinical scenarios provide context to facilitate learning the principles of safe surgical care. This book will be particularly useful for senior surgical residents and recent graduates as they prepare for the American Board of Surgery oral examination.

Thoroughly revised and updated for its Sixth Edition, this classic work is the most comprehensive reference on diagnosis and treatment of neuro-ophthalmologic diseases. This edition has two new editors—Valerie Biousse, MD and John B. Kerrison, MD—and has been streamlined from five volumes into three tightly edited volumes with a sharper focus on patient management. Coverage includes major updates on genetics of diseases, new diagnostic techniques, and the newest treatment options. This second volume covers tumors, the phacomatoses, and vascular disease. Volume 1 covers the visual sensory system, the autonomic nervous system, the ocular motor system, the eyelid, facial pain and headache, and nonorganic disease. Volume 3 covers degenerative, metabolic, infectious, inflammatory, and demyelinating diseases.

This is a concise how-to of successfully treating previously deemed "untreatable" retinal and optic nerve conditions with stem cell therapies. Based on the results of 11 years of experience treating approximately 600 patients, this text will serve as a template for others to develop similar stem cell based treatments in their specialty. Author, Jeffrey N. Weiss, MD is specifically poised to offer dependable insight on stem cell surgery for both the retina and the optic nerve, having performed the first retinal stem cell surgery in 2010, with Institutional Review Board (IRB) approved studies that are registered with the National Institute of Health (NIH), and listed on ClinicalTrials.gov. Featuring all original work from Dr. Jeffrey Weiss's specialization in stem cell ophthalmology, this book is primarily written for ophthalmologists, but structured so that specialists across disciplines can take the model presented and create their own studies and clinical trials using stem cell therapies.

2012 marked the centenary of one of the most significant discoveries of the early twentieth century, the discovery of X-ray diffraction (March 1912, by Laue, Friedrich, and Knipping) and of Bragg's law (November 1912). The discovery of X-ray diffraction confirmed the wave nature of X-rays and the space-lattice hypothesis. It had two major consequences: the analysis of the structure of atoms, and the determination of the atomic structure of materials. This had a momentous impact in chemistry, physics, mineralogy, material science, and biology. This book relates the discovery itself, the early days of X-ray crystallography, and the way the news of the discovery spread round the world. It explains how the first crystal structures were determined, and recounts which were the early applications of X-ray crystallography. It also tells how the concept of space lattice has developed since ancient times, and how our understanding of the nature of light has changed over time. The contributions of the main actors of the story, prior to the discovery, at the time of the discovery and immediately afterwards, are described through their writings and are put into the context of the time, accompanied by brief biographical details.
