This impressive collection features the
work of archaeologists who systematically
explore the material and social
consequences of new technological
systems introduced after the sixteenth-
century Spanish invasion in Mesoamerica.
It is the first collection to present case

studies that show how both commonplace
and capital-intensive technologies were
intertwined with indigenous knowledge
systems to reshape local, regional, and
transoceanic ecologies, commodity chains,
and political, social, and religious
institutions across Mexico and Central
America.

Terrorism: Commentary on Security
Documents is a series that provides
primary source documents and expert
commentary on various topics relating to
the worldwide effort to combat terrorism,
as well as efforts by the United States and

other nations to protect their national
security interests. Volume 144,
*Autonomous and Semiautonomous
Weapons Systems*, examines the impact of
robots and autonomous and
semiautonomous weapons systems on the
waging of modern warfare. It considers the
likely effects of emerging technological
innovations in this area from both a
political and strategic standpoint, in
addition to considering the implications of
such technologies within the context of
the law of armed conflict and international
humanitarian law. This volume is divided
into three sections: (1) U.S. policy and

approaches to the use of autonomous and semiautonomous weapons systems; (2) U.S. armed forces use of such weapons systems; and (3) potential terrorist use of such weapons systems. Official policy documents from the DoD and the U.S. Army and Air Force are complemented by reports from the Strategic Studies Institute/Army War College Press and other U.S. military sources.

Green Building Illustrated University of Washington Press

During the last decades, soil organic carbon (SOC) attracted the attention of a much wider array of specialists beyond agriculture and soil science, as it was proven to be one of the most crucial components of the earth's climate system, which has a great potential to be managed by humans. Soils as a carbon pool are one of the key factors in several Sustainable Development Goals, in particular Goal 15, "Protect, restore and promote sustainable use of terrestrial ecosystems, sustainably manage forests, combat desertification and halt and reverse land degradation and halt biodiversity loss" with the SOC stock being explicitly cited in Indicator 15.3.1. This technical manual is the first attempt

to gather, in a standardized format, the existing data on the impacts of the main soil management practices on SOC content in a wide array of environments, including the advantages, drawbacks and constraints. This manual presents different sustainable soil management (SSM) practices at different scales and in different contexts, supported by case studies that have been shown with quantitative data to have a positive effect on SOC stocks and successful experiences of SOC sequestration in practical field applications. Volume 4 includes 51 case studies dealing with cropland, grassland, integrated systems and farming approaches.

Recarbonizing global soils - A technical manual of recommended management practices Routledge

Women in early 18th century Spanish Colonial New Mexico had rights and privileges under Spanish law that were not enjoyed by other women in North America until the late 19th and early 20th century. Women were considered separate entities under the law and valuable members of Spanish society. As such, they could own property, inherit in their own name, and

act as court witnesses. In particular they could make accusations and denunciations to the local *alcalde mayor* and governor, which they frequently did. The documents in this book show that Spanish Colonial women were aware of their rights and took advantage of them to assert themselves in the struggling communities of the New Mexican frontier. In the documents, the women are shown making complaints of theft, physical and verbal abuse by their husbands or other women, and of non-payment of dowries or other inheritance. Other documents are included showing men accusing women of misrepresenting property ownership and dowry payments and of adultery and slander. Spain was a legalistic society and both women and men used the courts to settle even minor matters. Because the court proceedings were written down by a scribe and stored in the archives, many documents still exist. From these, thirty-one have been selected allowing us to hear the words of some outspoken Spanish women and the sometimes angry men, speaking their minds in court about their spouses, lovers of their spouses, children, and relatives, as well as their land, livestock and expected

inheritance. The documents transcribed and translated in this book are a small number of the existing documents held in Santa Fe at the Spanish Archives of New Mexico, at the Bancroft Library at University of California, the Archivo General de la Nacion in Mexico City, and elsewhere. A synopsis, editor's notes, maps, and biographical notes are provided. The material can be considered a companion, in part, to Ralph Emerson Twitchell's 1914 two volumes, *The Spanish Archives of New Mexico*, available in new editions from Sunstone Press. *** "This is an important work from Linda Tigges and Richard Salazar dealing with early eighteenth century women and the law. However their court cases were decided, these Spanish Colonial women were successful in the legacy they left for future generations. If you are a twelfth generation New Mexican or a newcomer, you will find this work priceless."
—Henrietta Martinez Christmas
Documents of the Senate of the State of New York Edward Elgar Publishing
This book provides relevant theoretical frameworks and the latest empirical research findings of Operations

Research/Management Science applied to Internet of Things. This book identifies and describes ways in which OR and MS have been applied and influenced the development of IoT. Examples are from smart industry; city; transportation; home and smart devices. It discusses future applications, trends, and potential benefits of this new discipline. It is written for professionals who want to improve their understanding of the strategic role of IoT at various levels of the organization, that is, IoT at the global economy level, at networks and organizations level, at teams and work groups, at information systems and, finally, IoT at the level of individuals, as players in the networked environments.

The endangered languages crisis is widely acknowledged among scholars who deal with languages and indigenous peoples as one of the most pressing problems facing humanity, posing moral, practical, and scientific issues of enormous proportions. Simply put, no area of the world is immune from language endangerment. The Oxford Handbook of Endangered Languages, in 39

chapters, provides a comprehensive overview of the efforts that are being undertaken to deal with this crisis. A comprehensive reference reflecting the breadth of the field, the Handbook presents in detail both the range of thinking about language endangerment and the variety of responses to it, and broadens understanding of language endangerment, language documentation, and language revitalization, encouraging further research. The Handbook is organized into five parts. Part 1, *Endangered Languages*, addresses the fundamental issues that are essential to understanding the nature of the endangered languages crisis. Part 2, *Language Documentation*, provides an overview of the issues and activities of concern to linguists and others in their efforts to record and document endangered languages. Part 3, *Language Revitalization*, includes approaches, practices, and strategies for revitalizing endangered and sleeping ("dormant") languages. Part 4, *Endangered Languages and Biocultural Diversity*, extends the discussion of language endangerment beyond its conventional boundaries to

consider the interrelationship of language, culture, and environment, and the common forces that now threaten the sustainability of their diversity. Part 5, Looking to the Future, addresses a variety of topics that are certain to be of consequence in future efforts to document and revitalize endangered languages.

Writing for Museums University of New Mexico Press

Words are everywhere in the museum. Amidst all the visual exhibits, and in many non-exhibition areas, swarm a host of words, talking to a vast swath of people in ways that visuals cannot. Signage at the information desk, brochures, exhibition videos, guided tours, membership materials, apps, and store labels: in a multi-screen world, where information explodes in every corner of the field of vision, clarity comes from the presence of words among the feast of visuals, helping contemporary audiences feel at home. Research bears out the need for a range of learning tools and it's not just visitors who benefit from verbal cues; donors,

educators, community partners, and volunteers will all engage more effectively with the museum that explains its brand mission with good writing. Whether written by administrators, staffers, freelancers, or interns, words are delivered by people in your museums with the knowledge that they will be interpreted by strangers. Your story is told everywhere, and with each narration it reinforces your brand; hopefully every single word reflects your brand. Each chapter tells how to put into words the stories you need to tell including: Blogs Brochures Exhibition videos Guided tour scripts Collateral programming talks Marketing plans Proposals to community partners Public Relations releases Social Media Solicitation letters Surveys Volunteer communications Website If you ever wished for a good writer, right on staff, ready to take on project, major or routine, here's the help you're looking for.

Recognizing Heritage A Research Agenda for Creative Tourism
"Corporate reform" is not reform at all. Instead, it is the systematic destruction of the foundational American institution of public education. The primary motivation

behind this destruction is greed. Public education in America is worth almost a trillion dollars a year. Whereas American public education is a democratic institution, its destruction is being choreographed by a few wealthy, well-positioned individuals and organizations. This book investigates and exposes the handful of people and institutions that are often working together to become the driving force behind destroying the community public school.

Doing Your Research Project: A Guide For First-Time Researchers Washington Researchers

Across the globe, states have long aimed to control the movement of people, identify their citizens, and restrict noncitizens' rights through official identification documents. Although states are now less likely to grant permanent legal status, they are increasingly issuing new temporary and provisional legal statuses to migrants. Meanwhile, the need for migrants to apply for frequent renewals subjects them to more intensive state surveillance. The contributors to Paper Trails examine how these new developments change migrants'

relationship to state, local, and foreign bureaucracies. The contributors analyze, among other things, immigration policies in the United Kingdom, the issuing of driver's licenses in Arizona and New Mexico, the Deferred Action for Childhood Arrivals program, and community know-your-rights campaigns. By demonstrating how migrants are inscribed into official bureaucratic systems through the issuance of identification documents, the contributors open up new ways to understand how states exert their power and how migrants must navigate new systems of governance. Contributors. Bridget Anderson, Deborah A. Boehm, Susan Bibler Coutin, Ruth Gomberg-Muñoz, Sarah B. Horton, Josiah Heyman, Cecilia Menjívar, Juan Thomas Ordóñez, Doris Marie Provine, Nandita Sharma, Monica Varsanyi

 Original and thought-provoking, this book investigates how creative experiences, interactions, and place-specific dynamics and contexts combine to give shape to the expanding field of creative tourism across

the globe. Exploring the evolution of research in this field, the authors investigate pathways for future research that advance conceptual questions and pragmatic issues.

Santa Fe National Forest (N.F.), Land Management Plan McGraw-Hill Education (UK)

This book presents a novel and cutting-edge interpretation of the evolving political economy of the Americas. Through a combination of qualitative research and theory, it considers the reconstruction of American-led hegemony in the Americas since the 1982 debt crisis and presents an examination of the new Pax Americana. Drawing on the Gramscian concept of hegemony as understood by Robert Cox and Henri Lefebvre, this book argues that since the 1982 debt crisis there has been a reconstruction of American-led hegemony under the signature of neo-liberalism and that it has taken place in the last four ten-year developmental planning stages, 'market reforms' in the 1980s, 'good governance' in the 1990s, 'poverty reduction' in the new millennium and, currently, the 'disembedding of security'. Each

"evolutionary stage" was constructed to secure the continuing motion of capitalist accumulation on a world scale. Moving from the global to the local scale, the book includes two detailed case studies on mining extraction in Bolivia to show how subaltern groups actually experienced and negotiated the transition from the old to the new Pax Americas at the level of everyday life and what conflicts arose. The book ends with a chapter on President Evo Morales and the re-foundation of Bolivia as an indigenous nation. The Political Economy of Space in the Americas will be of interest to students and scholars of political economy and Latin American politics.

Cascade Use in Technologies 2018
 Springer

This open access book synthesizes leading-edge science and management information about forest and rangeland soils of the United States. It offers ways to better understand changing conditions and their impacts on soils, and explores directions that positively affect the future of forest and rangeland soil health. This book outlines soil processes and identifies the research needed to manage forest and

rangeland soils in the United States. Chapters give an overview of the state of forest and rangeland soils research in the Nation, including multi-decadal programs (chapter 1), then summarizes various human-caused and natural impacts and their effects on soil carbon, hydrology, biogeochemistry, and biological diversity (chapters 2-5). Other chapters look at the effects of changing conditions on forest soils in wetland and urban settings (chapters 6-7). Impacts include: climate change, severe wildfires, invasive species, pests and diseases, pollution, and land use change. Chapter 8 considers approaches to maintaining or regaining forest and rangeland soil health in the face of these varied impacts. Mapping, monitoring, and data sharing are discussed in chapter 9 as ways to leverage scientific and human resources to address soil health at scales from the landscape to the individual parcel (monitoring networks, data sharing Web sites, and educational soils-centered programs are tabulated in appendix B). Chapter 10 highlights opportunities for deepening our understanding of soils and for sustaining long-term ecosystem health and appendix C summarizes research

needs. Nine regional summaries (appendix A) offer a more detailed look at forest and rangeland soils in the United States and its Affiliates.

Technology and Tradition in Mesoamerica after the Spanish Invasion Oxford University Press

In 2006 Congress established the Northern Rio Grande National Heritage Area to recognize the four-hundred-year "coexistence" of Spanish and Indian peoples in New Mexico and their place in the United States. National heritage areas enable local communities to partner with the federal government to promote historic preservation, cultural conservation, and economic development. *Recognizing Heritage* explores the social, political, and historical context of this and other public efforts to interpret and preserve Native American and Hispanic heritage in northern New Mexico. The federal government's recognition of New Mexico's cultural distinctiveness contrasts sharply with its earlier efforts to wipe out Indian and Hispanic cultures. Yet even celebrations of cultural difference can reinforce colonial hierarchies. Multiculturalism and colonialism have

overlapped in New Mexico since the nineteenth century, when Anglo-American colonists began promoting the region's unique cultures and exotic images to tourists. Thomas H. Guthrie analyzes the relationship between heritage preservation and ongoing struggles over land, water, and identity resulting from American colonization. He uses four sites within the heritage area to illustrate the unintentional colonial effects of multiculturalism: a history and anthropology museum, an Indian art market, a "tricultural" commemorative plaza, and a mountain village famous for its adobe architecture. *Recognizing Heritage* critiques the politics of recognition and suggests steps toward a more just multiculturalism that fundamentally challenges colonial inequalities.

Springer Science & Business Media
The Belen Cutoff gave the AT&SF Railway a legitimate transcontinental freight line by eliminating the steep grades of Raton Pass. The Cutoff also transformed the eastern plains of New Mexico in the first half of the twentieth century, leading to New Mexico's most significant population

increase as many homesteaders came to the region. This book tells that story by providing the perspectives of the AT&SF balanced by the experiences and narratives of railroad workers, homesteaders, and others. New research includes detailed consideration of internal railroad documents, local newspapers, and extensive oral-history interviews. As a result, this is the definitive account of the Belen Cutoff and provides a more complete and nuanced history of the region and the AT&SF Railway in New Mexico.

Doing your Research Project is the market leading book for students across the social sciences conducting small scale research projects.

Ho! To the Land of Sunshine Cengage Learning

The present book includes a set of selected extended papers from the 5th International Conference on Simulation and Modeling Methodologies, Technologies and Applications (SIMULTECH 2015), held in Colmar, France, from 21 to 23 July 2015. The conference brought together

researchers, engineers and practitioners interested in methodologies and applications of modeling and simulation. New and innovative solutions are reported in this book. SIMULTECH 2015 received 102 submissions, from 36 countries, in all continents. After a double blind paper review performed by the Program Committee, 19% were accepted as full papers and thus selected for oral presentation. Additional papers were accepted as short papers and posters. A further selection was made after the Conference, based also on the assessment of presentation quality and audience interest, so that this book includes the extended and revised versions of the very best papers of SIMULTECH 2015.

Commitment to high quality standards is a major concern of SIMULTECH that will be maintained in the next editions, considering not only the stringent paper acceptance ratios but also the quality of the program committee, keynote lectures, participation level and logistics.

Internet of Things University of Oklahoma Press

Scholars working in a number of disciplines _ archaeologists, classicists,

epigraphers, papyrologists, Assyriologists, Egyptologists, Mayanists, philologists, and ancient historians of all stripes _ routinely engage with ancient textual sources that are either material remains from the archaeological record or historical products of other connections between the ancient world and our own. Examining the archaeology-text nexus from multiple perspectives, contributors to this volume discuss current theoretical and practical problems that have grown out of their work at the boundary of the division between archaeology and the study of early inscriptions. In 12 representative case-studies drawn from research in Asia, Africa, the Mediterranean, and Mesoamerica, scholars use various lenses to critically examine the interface between archaeology and the study of ancient texts, rethink the fragmentation of their various specialized disciplines, and illustrate the best in current approaches to contextual analysis. The collection of essays also highlights recent trends in the development of documentation and dissemination technologies, engages with the ethical and intellectual quandaries presented by ancient inscriptions that lack

archaeological context, and sets out to find profitable future directions for interdisciplinary research.

New York Legislative Documents Food & Agriculture Org.

One of the first Anglo-Americans to record their travels to New Mexico, Dr. Rowland Willard (1794–1884) journeyed west on the Santa Fe Trail in 1825 and then down the Camino Real into Mexico, taking notes along the way. This edition of the young physician’s travel diaries and subsequent autobiography, annotated by New Mexico Deputy State Librarian Joy L. Poole, is a rich historical source on the two trails and the practice of medicine in the 1820s. Few Americans knew much about New Mexico when Willard set out on his journey from St. Charles, Missouri, where he had recently completed a medical apprenticeship. The growing commerce with the Southwest presented opportunities for the ambitious doctor. On his first day travelling the plains of the Santa Fe Trail, he met the mountain man Hugh Glass, who regaled Willard with stories of his wilderness experiences. Conducting a physical examination of Glass, Dr. Willard provided the only eye

witness medical account of Glass’s deformities resulting from a grizzly bear attack. Willard referred to the mountain man as Father Glass, a testimony to his age. He visited Santa Fe, practiced medicine in Taos, then traveled south to Chihuahua, arriving during a measles epidemic. Willard treated patients in Mexico for two years before returning to Missouri in 1828. Willard’s narrative challenges long-accepted assumptions about the exact routes taken by pack trains on the Santa Fe Trail. It also provides thrilling glimpses of a landscape densely populated with wildlife. The doctor describes “a great theater of nature,” with droves of elk and buffalo, and “wolf and antelope skipping in every direction.” With his traveling companions he hunted buffalo by crawling after them on all fours, afterward making jerky out of bison meat and boots out of their hides. Willard also details his medical practice, offering a revealing view of physicians’ operating practices in a time when sanitation and anesthesia were rare. The Santa Fe Trail and Camino Real took Willard on the journey of a lifetime. This account recalls the early days of the Santa Fe Trail trade

and westward American migration, when a doctor from Missouri could cross paths with mountain men, traders, Mexican clergymen, and government officials on their way to new opportunities.

[How to Find Company Intelligence in State Documents](#) ABC-CLIO

This revised and expanded edition of *Japanese Americans: From Relocation to Redress* presents the most complete and current published account of the Japanese American experience from the evacuation order of World War II to the public policy debate over redress and reparations. A chronology and comprehensive overview of the Japanese American experience by Roger Daniels are underscored by first person accounts of relocations by Bill Hosokawa, Toyo Suyemoto Kawakami, Barry Saiki, Take Uchida, and others, and previously undescribed events of the interment camps for enemy aliens by John Culley and Tetsuden Kashima. The essays bring us up to the U.S. government’s first redress payments, made forty eight years after the incarceration of Japanese Americans began. The combined vision of editors Roger Daniels, Sandra C. Taylor, and Harry

H. L. Kitano in pulling together disparate aspects of the Japanese American experience results in a landmark volume in the wrenching experiment of American democracy.
