Birth as every woman would like it to be • Recommended by Lamaze International as one of the top ten books for pregnant women and their families • Includes a 45-minute DVD of six live gentle births • More than

32,000 copies sold of the original edition New parents are faced with a myriad of choices about pregnancy, labor, and birth. In Gentle Birth Choices Barbara Harper, renowned childbirth advocate, nurse, former midwife, and mother of three, helps to clarify these choices and shows how to plan a meaningful, family-centered birth experience. She dispels medical myths and reimagines birth without fear, pain, or violence. Harper explains the numerous gentle birth choices available, including giving birth in an independent birth center, at home, or in a hospital birthing room; finding a primary caregiver who shares your philosophy of birth; and deciding how to best use current technologies. She also provides practical advice for couples wishing to explore the option of using a doula or water during labor and birth to avoid the unwanted effects of drugs and epidurals. The Gentle Birth Choices DVD blends interviews with midwives and physicians and six actual births that illustrate the options of water birth, home birth, and vaginal birth after a prior Cesarean section. The

DVD clearly reveals the strength of women during childbirth and the healthy and happy outcome of women exercising gentle birth choices. It is a powerful instructional tool, not only for expectant parents, but also for midwives, hospitals, birth centers, and doctors.

The INTERNATIONAL SWIMMING POOL AND SPA CODE (ISPSC) is the first comprehensive swimming pool code that coordinates with the provisions of the International Codes to meet the requirements of the Virginia Graeme Baker Act for upgrading pool safety. Developed with the support of the Association of Pool and Spa Professionals (APSP), the codebook encompasses the design, installation and inspection of aquatic facilities, based on the current ANSI (APSP) standards, technology, and code provisions. Coverage includes public swimming pools, public spas, permanently installed residential spas, above-ground/on-ground residential swimming pools, residential in-ground swimming pools, portable spas, aquatic

recreational facilities, barriers for all residential pools and spas, and water quality and suction entrapment avoidance for these facilities. Fall protection guards for springboards that are greater than 5 feet (1.5 meters) above a pool deck are now required. The guards will significantly reduce injuries from falls from high springboards.

The classic book on systems thinking—with more than half a million copies sold worldwide! "This is a fabulous book... This book opened my mind and reshaped the way I think about investing."—Forbes "Thinking in Systems is required reading for anyone hoping to run a successful company, community, or country.

Learning how to think in systems is now part of change-agent literacy. And this is the best book of its kind."—Hunter Lovins In the years following her role as the lead author of the international bestseller, *Limits to Growth*—the first book to show the consequences of unchecked growth on a finite planet—Donella Meadows remained a pioneer of environmental and social analysis until her untimely death in 2001. *Thinking in Systems* is a concise and crucial book offering insight for problem solving on scales ranging from the personal to the global. Edited by the Sustainability Institute's Diana Wright, this essential primer brings systems thinking out of the realm of computers and equations and into the tangible world, showing readers how to develop the systems-thinking skills that thought leaders across the globe consider critical for 21st-century life. Some of the biggest problems facing the world—war, hunger, poverty, and environmental degradation—are essentially system failures. They cannot be solved by fixing one piece

in isolation from the others, because even seemingly minor details have enormous power to undermine the best efforts of too-narrow thinking. While readers will learn the conceptual tools and methods of systems thinking, the heart of the book is grander than methodology. Donella Meadows was known as much for nurturing positive outcomes as she was for delving into the science behind global dilemmas. She reminds readers to pay attention to what is important, not just what is quantifiable, to stay humble, and to stay a learner. In a world growing ever more complicated, crowded, and interdependent, *Thinking in Systems* helps readers avoid confusion and helplessness, the first step toward finding proactive and effective solutions.

This updated edition of the best-selling *Small Engines and Power Equipment* is more than a simple engine repair manual. Designed for the beginner with little or no mechanical experience, this book is a graphically appealing, step-by-step guide that covers all of the most important engine maintenance and repair skills you'll need to keep your equipment running at peak performance. It also shows exactly how to perform mechanical upkeep and repairs on the most common outdoor power implements. With new and improved content for today's motorized equipment, this DIY bible includes engine and mechanical repair plus maintenance

instruction for all your outdoor power equipment, including lawn mowers, snow blowers, chain saws, power washers, generators, leaf blowers, rototillers, wood splitters, lawn edgers, and weed whips. With clear how-to photos and detailed diagrams, you'll see exactly what needs to be done. A comprehensive troubleshooting guide helps you define problems and enact solutions.

Among the many skills you'll learn are seasonal tune-ups, changing oil, servicing spark plugs, cleaning filters, replacing muffler, servicing the fuel tank, overhauling the carburetor, servicing brakes, inspecting flywheels, replacing the fuel pump, and replacing a rewind cord. With *Small Engines and Outdoor Power Equipment 2nd Edition* in your library, you won't need to haul the lawn mower off to the repair center and wait a few weeks just because a filter is plugged or the old gas needs to be replaced. This is a book every home-owning, weekend warrior should have a copy of.

Materials Selection in Mechanical Design

Chelsea Green Publishing
We are facing global issues concerning

environmental pollution and shortages of food, feed, phytomass (plant biomass) and natural resources, which will become more serious in the forthcoming decades. To solve these issues, immeasurable numbers of various plants and huge amounts of phytomass are required every year for food, feed and for the improvement of amenities, the environment and our quality of life. Increased phytomass is also required as alternative raw material for producing bio-energy, biodegradable plastics and many other plant-originated industrial products. Only by using phytomass as a reproducible energy source and raw material, instead of fossil fuels and atomic power, we can save natural resources and minimize environmental pollution. To increase phytomass globally, we need billions of quality transplants (small plants) to be grown yearly, in the field or in the greenhouse, under various environmental conditions. However, these high quality transplants can be produced only under carefully controlled, rather than variable environment al

conditions. Recent research has shown that the closed transplant production system requires considerably small amounts of electricity, water, fertilizer, CO) and pesticide to produce value-added transplants as scheduled with minimum release of environmental pollutants and minimum loss of transplants. The closed or closed-type transplant production system is defined as a transplant production system covered with opaque walls with minimized or controlled ventilation rates, using artificial lighting. With this system, photoperiod, light intensity and quality, air temperature, humidity, CO) concentration and air current speed can be controlled as desired.

New materials enable advances in engineering design. This book describes a procedure for material selection in mechanical design, allowing the most suitable materials for a given application to be identified from the full range of materials and section shapes available. A novel approach is adopted not found elsewhere. Materials are introduced through their properties; materials selection charts (a new development) capture the important features of all materials, allowing rapid retrieval of information

and application of selection techniques. Merit indices, combined with charts, allow optimisation of the materials selection process. Sources of material property data are reviewed and approaches

to their use are given. Material processing and its influence on the design are discussed. The book closes with chapters on aesthetics and industrial design. Case studies are developed as a method of

illustrating the procedure and as a way of developing the ideas further.
