 The lack of guidance on how to specify safety requirements that are properly traceable to the architecture design and to failure propagation models is one of the main reasons for their incompleteness and inconsistency, what turns to be a root cause of safety incidents. This book describes techniques to address this challenge in early and late stages of the development process.

 In traditional service architectures that follow the service statelessness principle, the state is primarily held in the data tier. Here, service operators utilize tailored storage solutions to guarantee the required availability; even though failures can occur at any time. This centralized approach to store and process an application's state in the data tier implies that outages of the entire tier cannot be tolerated. An alternative approach, which is in focus of this thesis, is to decentralize the processing of state information and to use more stateful components in the early tiers. The possibility to tolerate a temporary outage of an entire tier implies that the application's state can be manipulated by the remaining tiers without waiting for approval from the unavailable tier. This setup requires multi-leader replication, where every replica can accept writes and forwards the resulting changes to the other replicas. This thesis explores the feasibility of using multi-leader replication to store and process state in a decentralized manner across multiple tiers. To this end, two replication mechanisms, namely Conflict-free Replicated Data Types and Operational Transformation, are under particular investigation. We use and extend both mechanism to demonstrate that the aforementioned decentralization is worth considering when designing a service architecture. The challenges that arise when following our approach go back to fundamental impossibility results in distributed systems research, i.e. the impossibility to achieve a fault-tolerant consensus mechanism in asynchronous systems and the inevitable trade-off between availability and consistency in the presence of failures. With this thesis, we contribute to close the exposed gaps of both results by providing usable alternatives for standard IT services. We exemplify the feasibility of our alternatives with a fully distributed IMAP service and a programming library that provides the necessary extension to utilize our approach in a variety of web-based applications. All contributions of this thesis are based on both theory and practice. In particular, all extensions to the existing multi-leader replication mechanisms were proven to satisfy the necessary properties. Moreover, those extensions were also implemented as prototypical applications and evaluated against the corresponding de facto standard software from the industry. Basierend auf dem "service statelessness principle" ist es üblich, Softwaredienste so zu entwerfen, dass der Zustand des Dienstes primär in einer gekapselten Datenschicht verarbeitet wird. Innerhalb der Datenschicht werden spezielle Lösungen verwendet, um die Verfügbarkeit der Daten sicherzustellen. Dieser zentralisierte Ansatz hat zur Folge, dass ein Ausfall oder eine temporäre Nichtverfügbarkeit der gesamten Datenschicht zwangsweise zur Nichtverfügbarkeit des gesamten Dienstes führt. Ein alternativer Ansatz, welcher in dieser Arbeit erforscht wird, ist die dezentralisierte Speicherung und Verarbeitung der Daten in den darüberliegenden Softwareschichten. Um in diesem Ansatz einen Ausfall der gesamten Datenschicht zu kompensieren, ist es zwingend notwendig, dass die verbleibenden Schichten die eingehenden Anfragen ohne die Bestätigung durch die Datenschicht beantworten können. Hierfür wird eine Replikationsarchitektur benötigt, in der jedes Replikat die Anfragen direkt beantworten kann; die so genannte "multi-leader replication". In dieser Arbeit werden diese Replikationsarchitekturen verwendet, um den Zustand und die Daten eines Dienstes zu dezentralisieren und über mehrere Schichten zu replizieren. Hierbei werden zwei Mechanismen detaillierter betrachtet: "Conflict-free

Replicated Data Types" und "Operational Transformation". Anschließend werden beide Mechanismen erweitert und hinsichtlich der Verwendbarkeit für den beschriebenen Ansatz geprüft. Als Ergebnis dieser Arbeit wird gezeigt, dass ein dezentralisierter Ansatz mit den vorgestellten Mechanismen in Betracht gezogen werden kann. Die Herausforderungen, die bei der Anwendung dieses Ansatzes entstehen, basieren auf nachweislich unlösbaren Problemen aus der Forschung von Verteilten Systemen. Dazu gehört die Unlösbarkeit von Konsensus und die unausweichliche Abwägung zwischen Verfügbarkeit und Konsistenz in einem verteilten System mit Ausfällen. Diese Arbeit trägt dazu bei, die entstehenden Lücken, welche aus diesen fundamentalen Ergebnissen resultieren, zu schließen und die vorgeschlagenen Lösungen für reale IT Dienste anwendbar zu machen. Dieses wird anhand eines dezentralen IMAP Dienstes und einer Programmierbibliothek für Webanwendungen verdeutlicht. Alle Bestandteile dieser Doktorarbeit verbinden Theorie und Praxis. Alle vorgeschlagenen Erweiterungen für bestehende Replikationssysteme werden in formalen Modellen verifiziert und prototypisch implementiert. Die Implementierungen werden außerdem mit vergleichbarer Standardsoftware, welche dem heutigen Stand der Technik entspricht, in praktischen Experimenten evaluiert.

Financial Cryptography and Data Security Acropolis Books (GA)

Erich von Däniken claims to have never seen a UFO. But in the fall of 1987, on a desert ride, he experienced a close encounter of a very different kind. A being materialized before his eyes, and since the "thing" had no name, von Däniken called it "Tomy." This book is the story of Tomy. Some say that Tomy is a scientific impossibility. Yet Tomy was there, science or not. After all, Tomy had for a few weeks lived among us, and that was enough for plenty of interpersonal relationships. God knows that von Däniken was not the only one who had known Tomy; others could see him, as well. Now, after nineteen years of silence, von Däniken has decided to make public the incredible story of Tomy. Here, the bestselling author of Chariots of the Gods makes his foray into the world of fiction. Tomy and the Planet of Lies is a thrilling adventure novel that will keep listeners on the edge of their seats.

 Cryptography, the art and science of creating secret codes, and cryptanalysis, the art and science of breaking secret codes, underwent a similar and parallel course during history. Both fields evolved from manual encryption methods and manual codebreaking techniques, to cipher machines and codebreaking machines in the first half of the 20th century, and finally to computerbased encryption and cryptanalysis from the second half of the 20th century. However, despite the advent of modern computing technology, some of the more challenging classical cipher systems and machines have not yet been successfully cryptanalyzed. For others, cryptanalytic methods exist, but only for special and advantageous cases, such as when large amounts of ciphertext are available. Starting from the 1990s, local search metaheuristics such as hill climbing, genetic algorithms, and simulated annealing have been employed, and in some cases, successfully, for the cryptanalysis of several classical ciphers. In most cases, however, results were mixed, and the application of such methods rather limited in their scope and performance. In this work, a robust framework and methodology for the cryptanalysis of classical ciphers using local search metaheuristics, mainly hill climbing and simulated annealing, is described. In an extensive set of case studies conducted as part of this research, this new methodology has been validated and demonstrated as highly effective for the cryptanalysis of several challenging cipher systems and machines, which could not be effectively cryptanalyzed before, and with drastic improvements compared to previously published methods. This work also led to the decipherment of original encrypted messages from WWI, and to the solution, for the first time, of several public cryptographic challenges.

The 45th edition of International Directory of Arts (IDA) contains more about 150,000 addresses

(including telephone and fax numbers, eMail and URL) from all over the world: Museums and Public Galleries Universities, Academies, Schools Associations Art and Antique Trade, Numismatics Art and Antiques Fairs Galleries Auctioneers Restorers Art Publishers Art Journals Antiquarians and Art Booksellers Within each chapter, addresses are arranged by country and within country, sections are set out alphabetically by city. Details of the specializations of museums, as well as the names of curators and senior academic museum staff are also included. The address contents were revised and updated for this edition following a questionnaire mailing. The revision also took into account numerous national and international reference works. The eBookPLUS format comprises the content and search criteria of the printed edition and its indices, facilitating complex searches.

This book constitutes the thoroughly refereed post-conference proceedings of the 22nd International Conference on Financial Cryptography and Data Security, FC 2018, held in Nieuwport, Curaçao, in February/ March 2018. The 27 revised full papers and 2 short papers were carefully selected and reviewed from 110 submissions. The papers are grouped in the following topical sections: Financial Cryptography and Data Security, Applied Cryptography, Mobile Systems Security and Privacy, Risk Assessment and Management, Social Networks Security and Privacy and much more.

In its 27th edition *Museums of the World* covers more than 55,000 museums in 202 countries, listed hierarchically by country and place, and within places alphabetically by name. A separate chapter records some 500 museum associations in 132 countries. Each museum has been assigned to one or more of 22 categories identifying the type and focus of the museum. A typical entry contains the following details: Name of the museum in the original language with an English translation when necessary Address, phone and fax numbers E-mail address and URL Type of museum Year of foundation Head of museum Academic staff Collections and facilities An alphabetical index of museums, an index of persons covering directors, presidents, curators and academic staff of the museums, a personality index recording artists whose works are shown predominantly in a specific museum and/or referring to memorabilia of famous individuals, and a subject index facilitate the access to the data. The eBookPLUS format comprises the content and search criteria of the printed edition and its indices, facilitating complex searches.

Michael Lambertus examines the influence of perceived homosexual sexual and gender nonconform behaviors on the elicitation of two moral emotions, disgust and contempt, as well as moral judgment of male participants in his study. In doing so, he considers the extent to which these men endorse specific cultural beliefs about masculinity—also referred to as 'masculinity ideology'. The author succeeds in proving an increase in disgust towards perceived homosexual, but not towards heterosexual sexual behavior of a description of a fictional person, the more the participants advocate masculine gender role norms.

In proof theory we investigate the objects used for computations and arguments in computer science and mathematics. Our starting point is the classical analysis given by Gerhard Gentzen in the 1930s. We develop this further using a new theory of ordinal notation and connecting this with combinatorics on finite trees.

What does it mean for an agent to be free? Is determinism true? What are laws of nature? This book deals with the interconnections between these questions. Backmann argues for the view that

libertarianism can be reconciled with determinism. In order to reach this goal, libertarianism – classically defined as an incompatibilist theory of free will – is defined as the thesis that at the time of decision, the agent must be able to choose between alternative courses of action. Backmann claims that this notion of libertarianism can be reconciled with determinism provided that determinism is understood in a Humean fashion, i.e. backed by a Humean theory of laws of nature. The resulting view – Humean Libertarianism – is an intermediate position between classical compatibilism and incompatibilism.

Develop smaller, lighter web apps that are simple to create and easy to test, extend, and maintain as they grow. This hands-on guide introduces you to AngularJS, the open source JavaScript framework that uses Model-view-controller (MVC) architecture, data binding, client-side templates, and dependency injection to create a much-needed structure for building web apps. Guided by two engineers who worked on AngularJS at Google, you'll walk through the framework's key features, and then build a working AngularJS app—from layout to testing, compiling, and debugging. If you have JavaScript experience, you'll learn how AngularJS helps reduce the complexity of your web app. Dive deep into Angular's building blocks and learn how they work together Gain maximum flexibility by separating logic, data, and presentation responsibilities with MVC Assemble your full app in the browser, using client-side templates Use AngularJS directives to extend HTML with declarative syntax Communicate with the server and implement simple caching with the \$http service Use dependency injection to improve refactoring, testability, and multiple environment design Get code samples for common problems you face in most web apps

This yearbook, the sole publication of its kind, addresses the contemporary interest in the philosophy of humor. It invites philosophers from various traditions to share studies of humor, laughter, and the comic, and their roles (e.g., epistemological, ethical, aesthetic) within the history and practice of philosophy. It publishes not only scholarly articles of the highest quality, but also humorous or satirical pieces of philosophic interest.

Illusions and Disillusions of Psychoanalytic Work recounts and explores the disappointing and sometimes tragic evolutions of the treatments of certain patients who are resistant to the effects of analytic work. In this book the author reports cases taken from his own experience and that of his collaborators. The author points out moreover, that such cases have never been absent from the series of analyses that he has treated, from the early days of his practice up until today, without minimizing his counter-transference reactions or their possible impact on these disappointing evolutions.

International Directory of Arts 2021

Automatic speech recognition systems have to handle various kinds of variabilities sufficiently well in order to achieve high recognition rates in practice. One of the variabilities that has a major impact on the performance is the vocal tract length of the speakers. Normalization of the features and adaptation of the acoustic models are commonly used methods in speech recognition systems. In contrast to that, a third approach follows the idea of extracting features with transforms that are invariant to vocal tract lengths changes. This work presents several approaches for extracting invariant features for automatic speech recognition systems. The robustness of these features under various training-test conditions is evaluated and it is described how the robustness of the features to noise can be increased. Furthermore, it is shown how the spectral effects due to different vocal tract lengths can be estimated with a registration method and how this can be used for speaker normalization.
