A discussion of all the key issues in the use of human pluripotent stem cells for treating degenerative diseases or for replacing tissues lost from trauma. On the practical side, the topics range from the problems of deriving human embryonic stem cells and driving their differentiation along specific lineages, regulating their development into mature cells, and bringing stem cell therapy to clinical trials. Regulatory issues are addressed in discussions of the ethical debate surrounding the derivation of human embryonic stem cells and the current policies governing their use in the United States and abroad, including the rules and conditions regulating federal funding and questions of intellectual property.

Cleopatra United Nations

Biografia câștigătoare a Premiului Pulitzer aduce la viață una dintre cele mai fascinante femei din istoria lumii: Cleopatra, ultima regină a Egiptului. Palatul ei strălucea fiind împodobit cu onix, granate și aur, dar mustea de intrigi politice și sexuale. Peste toate acestea, Cleopatra era un strateg viclean și un negociator priceput. Deși a trăit mai puțin de 40 de ani, a retrasat contururile lumii antice. A fost căsătorită de două ori, de fiecare dată cu un frate. A purtat un violent război civil cu primul, cât ambii erau încă adolescenți. Pe cel de al doilea l-a otrăvit. În cele din urmă, a scăpat și de o soră ambițioasă; incestul și asasinatele erau specialitatea familiei. Din câte se pare, Cleopatra a avut relații intime cu doar doi bărbați. Cu toate acestea, aceștia au fost Iulius Caesar și Marcus Antonius, doi dintre cei mai cunoscuți romani ai vremurilor lor. Ambii erau căsătoriți cu alte femei. Cleopatra a avut un copil cu Caesar și, după asasinarea acestuia, alți trei cu prote - jatul lui. Era deja cel mai puternic conducător din zona mediteraneană, iar relația cu Antonius i-a confirmat statutul de cea mai influentă fe - meie a

epocii. Cei doi vor încerca să fondeze un imperiu, într-o alianță care le va aduce sfârșitul. Faimoasă înainte de a deveni notorie, Cleopatra a intrat în istorie din motive greșite. Shakespeare și Shaw i-au pus cu - vinte în gură, Michelangelo, Tiepolo și Elizabeth Taylor i-au pus un chip. Pe traseu, personalitatea și drama circumstanțelor Cleopatrei s-au pierdut. Întorcân - du-se la sursele clasice, Stacy Schiff separă cu îndrăzneală faptele de ficțiune pentru a o sal - va pe regina fascinantă a cărei moarte a adus cu ea o nouă ordine mondială. Bo - gată în detalii, epică în scop, Schiff real - izează o reconstituire profund originală a unei vieți fascinante.

While indigenous peoples make up around 370 million of the world's population - some 5 per cent - they constitute around one-third of the world's 900 million extremely poor rural people. Every day, indigenous communities all over the world face issues of violence and brutality. Indigenous peoples are stewards of some of the most

biologically diverse areas of the globe, and their biological and cultural wealth has allowed indigenous peoples to gather a wealth of traditional knowledge which is of immense value to all humankind. The publication discusses many of the issues addressed by the Declaration on the Rights of Indigenous Peoples and is a cooperative effort of independent experts working with the Secretariat of the Permanent Forum on Indigenous Issues. It covers poverty and well-being, culture, environment, contemporary education, health, human rights, and includes a chapter on emerging issues.

Encyclopedia of Biomedical Engineering

Oxford University Press
Surrealism is a particularly complex international movement, embracing both the literary and the visual arts, while lacking any single visual or literary style, and this, together with its long existence, has served to generate a very substantial body of writings - poetry, novels, essays, theoretical writings, manifestoes and other documents - which might be considered as

fundamental to any proper understanding of the movement. The *Sources of Surrealism* is a comprehensive sourcebook documenting the origins and development of Surrealism internationally through a collection of 234 original documents. The texts have been selected from across the whole range of Surrealist writing, as well as including influential predecessors like Rimbaud and Lautreamont, and contemporaries such as Raymond Roussel and Alfred Jarry. Texts are published in English throughout, with new translations provided for previously untranslated material. The book addresses for the first time the neglected area of the relationship between Surrealism and popular culture, including Surrealism's engagement with cinema, and attempts to address the increased critical interest in what in the past were more neglected figures, such as Michel Leiris and Georges Bataille. Particular emphasis is given to the earlier documents and influences upon the Surrealist movement, as well as to the period of its

internationalism during the 1930s, and the texts cover Surrealism in Britain and Belgium as well as France. This fascinating collection presents what was most vital about this complex and often contradictory movement, and serves as an essential reference book for scholars, as well as stimulating reading for all those with a general interest in the subject.

The Anthropocene is the human-dominated modern era that has accelerated social, environmental and climate change across the world in the last few decades. This open access book examines the challenges the Anthropocene presents to the sustainable management of deltas, both the many threats as well as the opportunities. In the world's deltas the Anthropocene is manifest

in major land use change, the damming of rivers, the engineering of coasts and the growth of some of the world's largest megacities; deltas are home to one in twelve of all people in the world. The book explores biophysical and social dynamics and makes clear adaptation choices and trade-offs that underpin policy and governance processes, including visionary delta management plans. It details new analysis to illustrate these challenges, based on three significant and contrasting deltas: the Ganges-Brahmaputra-Meghna, Mahanadi and Volta. This multi-disciplinary, policy-orientated volume is strongly aligned to the United Nation's Sustainable Development Goals as delta populations often experience extremes of poverty, gender and structural inequality, variable levels of health and well-being, while being vulnerable to extreme and systematic climate change.

The Reconstruction of Proto-Malayo-Javanic

Hirmer Verlag GmbH

The discovery of adult neurogenesis and of stem cells in the brain has changed our view of the

mature brain. Though we now know that the adult brain can make new neurons, it normally does so only in two privileged regions, the olfactory bulb and the hippocampus. Yet stem cells, which have the potential to produce new neurons, can be found throughout the adult brain. So why does the brain not make wider use of its potential for neurogenesis? And what is the function of new neurons and of neural stem cells in areas where they occur? After all, the brain regenerates poorly and many neurological and psychiatric disorders are chronic because cell replacement has not taken place. This is the first comprehensive, integrated account of one of the most exciting areas of neuroscience. It begins with the historical background and discusses theories of adult neurogenesis and neural stem cell biology in the context of learning and memory processes as well as structural plasticity. It describes in detail neurogenesis in the adult hippocampus and olfactory system and then surveys the regulatory, functional, and comparative aspects, concluding with a chapter on the provocative

hypotheses that link failing adult neurogenesis with such diseases as temporal lobe epilepsy, major depression, brain tumors, and dementias. For graduate students, investigators, and clinicians in the neurosciences, developmental biology, and stem cell research, this book is a unique resource that sifts through the evidence for exciting scientific ideas and fosters a realistic view of the therapeutic possibilities for the use of stem cells in the adult brain.

Providing easy-to-use alternatives to the "stand and deliver" approach to teaching that causes so many students to tune out--or even drop out--

Total Participation

Techniques presents dozens of ways to engage K-12 students in active learning and allow them to demonstrate the depth of their knowledge and understanding. The authors, Pérsida Himmele and William Himmele,

explain both the why and the how of Total Participation Techniques (TPTs) as they explore the high cost of student disengagement, place TPTs in the context of higher-order thinking and formative assessments, and demonstrate how to create a “TPT-conducive classroom.” Readers will learn how to implement field-tested techniques they can use on the spot (e.g., Quick-Draws, Quick-Writes, Chalkboard Splash); with Hold-Up cards (e.g., True/Not True, Selected Response); with movement (e.g., Bounce Cards, Line-Ups, Simulations); and to guide note-taking and concept analysis (e.g., Picture Notes, 3-Sentence Wrap-Up, Debate Team Carousel). Each TPT is presented in four parts: * A descriptive overview * How It Works--step-by-step instructions for implementation * How to Ensure Higher-Order Thinking--ideas for advancing students beyond surface-level thinking * Pause to Apply--suggestions for how to adapt and personalize the technique for specific contexts and content areas Filled with examples from real classrooms, Total Participation Techniques is an essential

toolkit for teachers at all levels and for administrators who want a model for analyzing lessons to ensure that they are relevant, engaging, and cognitively challenging. Bibliography of Reproduction PU Texas Exhibition catalog of a traveling exhibition of the same name. *International African Bibliography* IGI Global Few personalities from classical antiquity are more familiar yet more poorly grasped than Cleopatra (69-30 BC), queen of Egypt. In this work, Duane Roller has written the definitive biography of the queen, not as a figure in popular culture or even in the arts and literature of the last 500 years, but as the last Greek queen of Egypt. *The Sustainable Chef* Corwin Press Innovations in library services are rapidly developing within numerous areas including building design, program and event planning, patron experience and engagement, literacy program development, and administration and management. To ensure these changes are implemented and considered successfully, a closer look at the

challenges, trends, and practices of these innovations is crucial. *Technological Advancements in Library Service Innovation* examines the recent activities of successful and groundbreaking research and practices around the world surrounding library service innovation and presents various forward-thinking initiatives. It also provides an overview of libraries’ successful experiences, identifies emerging global themes and trends, and offers guidance to library practitioners on how to pursue the recent trends in their own library environment. Covering topics such as technology adoption and organizational structures, this book is ideal for library professionals, researchers, academicians, instructors, and students.

Fantastic Women

University of Chicago Press

This revolutionary, user-friendly textbook not only guides social workers in developing competence in the DSM system of diagnosis, it also assists them in staying attuned during client assessment to social work values and principles: a focus on

client strengths, concern for the worth and dignity of individuals, appreciation of environmental influences on behavior, and commitment to evidence-informed practice. The authors, seasoned practitioner-scholars, provide an in-depth exploration of fourteen major mental disorders that social workers commonly see in practice, including anxiety disorders, depression, bipolar disorder, and schizophrenia. They skillfully integrate several perspectives in order to help practitioners meet the challenges they will face in client assessment. A risk and resilience framework helps social workers understand environmental influences on the emergence of mental disorders and the strengths that clients already possess. Social workers will also learn to apply critical thinking to the DSM when it is inconsistent with social work values and principles. Finally, the authors catalog the latest evidence-based assessment instruments and treatments for each disorder so that social workers can intervene efficiently and effectively, using the best resources

available. Students and practitioners alike will appreciate the wealth of case examples, evidence-based assessment instruments, treatment plans, and new social diversity sections that make this an essential guide to the assessment and diagnostic processes in social work practice.

This book provides the first systematic and accessible text for students of hospitality and the culinary arts that directly addresses how more sustainable restaurants and commercial food services can be achieved. Food systems receive growing attention because they link various sustainability dimensions. Restaurants are at the heart of these developments, and their decisions to purchase regional foods, or to prepare menus that are healthier and less environmentally problematic, have great

influence on food production processes. This book is systematically designed around understanding the inputs and outputs of the commercial kitchen as well as what happens in the restaurant from the perspective of operators, staff and the consumer. The book considers different management approaches and further looks at the role of restaurants, chefs and staff in the wider community and the positive contributions that commercial kitchens can make to promoting sustainable food ways. Case studies from all over the world illustrate the tools and techniques helping to meet environmental and economic bottom lines. This will be essential reading for all students of hospitality and the culinary arts.

Encyclopedia of Biomedical Engineering, Three Volume Set is a unique source for rapidly evolving updates on topics that are at the interface of the biological sciences and engineering. Biomaterials, biomedical devices and techniques play a significant role in

improving the quality of health care in the developed world. The book covers an extensive range of topics related to biomedical engineering, including biomaterials, sensors, medical devices, imaging modalities and imaging processing. In addition, applications of biomedical engineering, advances in cardiology, drug delivery, gene therapy, orthopedics, ophthalmology, sensing and tissue engineering are explored. This important reference work serves many groups working at the interface of the biological sciences and engineering, including engineering students, biological science students, clinicians, and industrial researchers. Provides students with a concise description of the technologies at the interface of the biological sciences and engineering. Covers all aspects of biomedical engineering, also incorporating perspectives from experts working within the domains of biomedicine, medical engineering, biology, chemistry, physics, electrical engineering, and more. Contains reputable, multidisciplinary content from domain experts

Presents a 'one-stop' resource for access to information written by world-leading scholars in the field

 Oxford University Press
 Organ transplantation has revolutionized the treatment for end-stage organ failure. Immunosuppression is still a major approach currently used in the prevention and treatment of allograft rejection. Both editors Dr. Chen and Dr. Qian have been contributing to preclinical evaluation of immunosuppressants for more than 25 years in North America. Experts from the United States, Canada, the United Kingdom, China, Japan, Germany, Sweden, Hungary and Brazil contributed 23 chapters to this book, providing details of immunological basis in transplantation. They also describe six classes of immunosuppressive agents (calcineurin inhibitors, mTOR inhibitors, JAK-STAT inhibitors, antiproliferative agents, costimulation blockers and corticosteroids), as well as ischemia/reperfusion injury treated agents. Additionally, the new development of cell

therapy in the induction of transplant tolerance is introduced. This book provides many important references for the research direction of novel immunosuppressants. Readers that will find this book useful include transplant physicians, surgeons, nurses, immunologists, pharmacologists, pharmacists, medical students, residents and trainees in transplantation.
Deltas in the Anthropocene Springer Science & Business Media
 "The female side of Surrealism: in the period from 1930 to the 1960s, women artists from all over the world were involved in the Surrealist movement and created a fantastic universe of images. Some 260 works of painting, drawing, sculpture, photography, and film serve to present the extraordinary and imaginative contributions of 36 international avant-garde women artists to one of the seminal art movements of modernism."--Page 4 de la couverture
State of the World's Indigenous Peoples Frontiers Media SA
 In Surrealism at Play Susan Laxton writes a

new history of surrealism in which she traces the centrality of play to the movement and its ongoing legacy. For surrealist artists, play took a consistent role in their aesthetic as they worked in, with, and against a post-World War I world increasingly dominated by technology and functionalism.

Whether through exquisite-corpse drawings, Man Ray's rayographs, or Joan Miró's visual puns, surrealists became adept at developing techniques and processes designed to guarantee aleatory outcomes. In embracing chance as the means to produce unforeseeable

ends, they shifted emphasis from final product to process, challenging the disciplinary structures of industrial modernism. As Laxton demonstrates, play became a primary method through which surrealism refashioned artistic practice, everyday experience, and the nature of subjectivity.
