Active Learning in Organic Chemistry Simon and Schuster
Book Description This book takes students from the basic beginnings to a more thorough understanding of the fundamental concepts in organic and biochemistry. The concepts in this textbook are presented in small segments in a form that encourages students to explore and discover patterns and ideas. Diagrams, models, chemical reaction equations, and tables are used to present the information. A step-by-step series of Critical Thinking Questions follows each section to guide the student to important observations and to encourage students to work as a group to confirm the answers. Each activity begins with a list of Prerequisite Concepts and Learning Objectives. The activity concludes with Exercises that reinforce, expand, and extend the concepts presented. The topics covered range from the basics of naming the simplest organic compounds to the applications of the principles of organic chemistry to biochemical molecules and processes. Biography Julie K. Abrahamson, B.A. Bethany College, Kansas (1979), Ph.D. University of Oklahoma (1984), has been teaching general and introductory chemistry courses at the University of North Dakota since 1992. Her emphasis has been in courses intended for pre-nursing students, where she has become well acquainted with their needs and challenges as they learn chemistry. In 2006, a workshop in Process Oriented Guided Inquiry Learning introduced new insights into alternatives to traditional lecture methods. Since that time, Abrahamson has used Guided Inquiry approaches in her courses where possible, and has worked to develop new materials suited for these courses.

Due to the COVID-19 pandemic, teacher preparation programs modified their practices to fit the delivery modes of school districts while developing new ways to prepare candidates. Governmental agencies established new guidelines to fit the drastic shift in education caused by the pandemic, and P-12 school systems made accommodations to support teacher education candidates. The pandemic disrupted all established systems and norms; however, many practices and strategies emerged in educator preparation programs that will have a lasting positive impact on P-20 education and teacher education practices. Such practices include the reevaluation of schooling practices with shifts in engagement strategies, instructional approaches, technology utilization, and supporting students and their families. *Redefining Teacher Education and Teacher Preparation Programs in the Post-COVID-19 Era* provides relevant, innovative practices implemented across teacher education

programs and P-20 settings, including delivery models; training procedures; theoretical frameworks; district policies and guidelines; state, national, and international standards; digital design and delivery of content; and the latest empirical research findings on the state of teacher education preparation. The book showcases best practices used to shape and redefine teacher education through the COVID-19 pandemic. Covering topics such as online teaching practices, simulated teaching experiences, and emotional learning, this text is essential for preservice professionals, paraprofessionals, administrators, P-12 faculty, education preparation program designers, principals, superintendents, researchers, students, and academicians. In a book that is both groundbreaking and accessible, Daniel C. Dennett, whom Chet Raymo of The Boston Globe calls "one of the most provocative thinkers on the planet," focuses his unerringly logical mind on the theory of natural selection, showing how Darwin's great idea transforms and illuminates our traditional view of humanity's place in the universe. Dennett vividly describes the theory itself and then extends Darwin's vision with impeccable arguments to their often surprising conclusions, challenging the views of some of the most famous scientists of our day.
