Xlibris Corporation Unmanned Aircraft Systems delivers a much needed introduction to UAV System technology, taking an integrated approach that avoids compartmentalising the subject. Arranged in four sections, parts 1-3 examine the way in which various engineering disciplines affect the design, development and deployment of UAS. The fourth section assesses the future challenges and opportunities of UAS. Technological innovation and increasingly diverse applications are two key drivers of the rapid expansion of UAS technology. The global defence budget for UAS procurement is

expanding, and in the future the market for civilian UAVs is expected to outmatch that of the military. Agriculture, meteorology, conservation and border control are just a few of the diverse areas in which UAVs are making a significant impact; the author addresses all of these applications, looking at the roles and technology behind both fixed wing and rotorcraft UAVs. Leading aeronautical consultant Reg Austin co-founded the Bristol International Remotely Piloted Vehicle (RPV) conferences in 1979, which are now the longest-established UAS conferences worldwide. In addition, Austin has over 40 years' experience in the design and

development of UAS. One of Austin's programmes, the "Sprite UAV System" has been deployed around the world and operated by day and night, in all weathers.

Hummingbirds BoD – Books on Demand
A beautifully drawn comic book inspired by Japanese manga and Indigenous art and legend. This powerful story about a brave hummingbird shares a message of environmental stewardship. Hummingbirds have long been a symbol of wisdom and courage. In this breathtaking book, a hummingbird makes a valiant effort to put out a raging fire that threatens her forest home. She makes many trips over the burning woodland because her tiny beak can only hold one drop of water at a time. Her efforts show the other creatures in the forest that doing something—anything—is better than doing nothing at all. Will they

join her in her fight to save their home? The hummingbird parable, which originates with the Quechuan people of South America, has become a talisman for environmentalists and activists worldwide committed to making meaningful change. This retelling, enlivened by Michael Nicoll Yahgulanaas' fabulous Haida-Manga illustrations, is suitable for all ages of would-be activists. Although environmental responsibility often seems like an overwhelming task, *The Flight of the Hummingbird* shows how easy it is to start and how great the effect could be if everyone just did what they could.

 Robert Tyrrell, the world's foremost photographer of hummingbirds, has successfully captured on film the utterly fascinating day-to-day activities of our colorful North American species. Included among the 235 full-color pictures are never-before-photographed sequences such as nesting, molting, preening and territorial aggression, as well as an unprecedented portfolio of hummingbirds feeding from wildflowers. Esther Tyrrell has

written the accompanying illuminating text, by far the most complete and up-to-date information on hummingbirds ever assembled, which will make this book the definitive source for both scientists and the general reader for years to come. This lavishly illustrated volume opens with an introduction to this lovely family of Helicopter schools in the U.S. Saddleback Educational Publishing Popular Science gives our readers the information and tools to improve their technology and their world. Originally designed as a target drone for the U.S. Army, the NPS hummingbird has undergone several modifications to convert it into a reliable research platform. The 163 pound remotely piloted helicopter (RPH) is powered by a Weslake Aeromarine Engines Limited (WAEL) 342 two stroke, twin cylinder, 25 hp, gasoline engine. An engine failure due to cylinder overheating halted research efforts until investigation as to the cause and subsequent corrections could be made. Costing approximately \$3000 per engine, another failure is unacceptable. The tasks undertaken in this thesis were to investigate the cause

of the overheat failure and improve the engine cooling system. Cooling system corrections required total redesigns of the engine cooling and engine start systems. Additionally, research of the RPH's history revealed a need for a torsional shock absorber to be incorporated in the drive train to increase component life. The changes made to Hummingbird provide a decrease in empty weight, minimal center of gravity change and, most importantly, an increase in user safety finishing the Department of Aeronautics and Astronautics with a dependable vehicle for rotary wing research. *Flight of the Hummingbird* John Wiley & Sons

“A surprisingly maximalist portrait of a life.” —New York Times Book Review The 52 micro-memoirs in genre-defying *Heating & Cooling* offer bright glimpses into a richly lived life, combining the compression of poetry with the truth-telling of nonfiction into one heartfelt, celebratory book. Alternatingly wistful and wry, ranging from childhood recollections to quirky cultural observations, these micro-memoirs build on one another to shape a life from unexpectedly illuminating moments.

Nordic Literature: A comparative history is a multi-volume comparative analysis of the literature of the

Nordic region. Bringing together the literature of Finland, continental Scandinavia (Sweden, Norway, Denmark, and Sápmi), and the insular region (Iceland, Greenland, and the Faroe Islands), each volume of this three-volume project adopts a new frame through which one can recognize and analyze significant clusters of literary practice. This first volume, *Spatial nodes*, devotes its attention to the changing literary figurations of space by Nordic writers from medieval to contemporary times. Organized around the depiction of various “scapes” and spatial practices at home and abroad, this approach to Nordic literature stretches existing notions of temporally

linear, nationally centered literary history and allows questions of internal regional similarities and differences to emerge more strongly. The productive historical contingency of the “North” as a literary space becomes clear in this close analysis of its literary texts and practices.

researchers were not

able to find an adequate explanation for the occurrence of lift until the beginning of the 21st century. Also, for the fundamentals of stability and control, there was no theory available that the pioneers could rely on. Only after the first motorized flights had been successfully made did researchers become more interested in the science of aviation, which from then on began to take shape. In modern day life, many millions of passengers are transported every year by air. People in the western societies take to the skies, on average, several times a year. Especially in areas surrounding busy airports, travel by plane has been on the rise since the end of the Second World War.

Despite becoming familiar with the sight of a jumbo jet commencing its flight once or twice a day, many find it astonishing that such a colossus with a mass of several hundred thousands of kilograms can actually lift off from the ground.
