Crime analysis has
become an increasingly
important part of policing
and crime prevention, and
thousands of specialist
crime analysts are now
employed by police forces
worldwide. This is the first
book to set out the
principles and practice of
crime analysis, and is
designed to be used both
by crime analysts
themselves, by those
responsible for the
training of crime analysts
and teaching its
principles, and those
teaching this subject as
part of broader policing
and criminal justice
courses. The particular
focus of this book is on
the adoption of a problem
solving approach, showing
how crime analysis can be
used and developed to
support a problem
oriented policing
approach – based on the
idea that the police should

concentrate on identifying
patterns of crime and
anticipating crimes rather
than just reacting to
crimes once they have
been committed. In his
foreword to this book,
Nick Ross, presenter of
BBC Crime Watch, argues
passionately that crime
analysts are 'the new face
of policing', and have a
crucial part to play in the
increasingly sophisticated
police response to crime
and its approach to crime
prevention – 'You are the
brains, the expert, the
specialist, the boffin.'

Qualitative content analysis is a powerful method for analyzing large amounts of qualitative data collected through interviews or focus groups. It is frequently employed by students, but introductory textbooks on content analysis have largely focused on the quantitative version of the method. In one of the first to focus on qualitative content analysis, Margrit Schreier takes students step-by step through: - creating a coding frame - segmenting the material - trying out the coding frame - evaluating the trial coding - carrying out the main coding - what

comes after qualitative content analysis - making use of software when conducting qualitative content analysis. Each part of the process is described in detail and research examples are provided to illustrate each step. Frequently asked questions are answered, the most important points are summarized, and end of chapter questions provide an opportunity to revise these points. After reading the book, students are fully equipped to conduct their own qualitative content analysis. Designed for upper level undergraduate, MA, PhD students and researchers across the social sciences, this is essential reading for all those who want to use qualitative content analysis.

Quality management for small, regional, and national breweries is critical for the success of craft brewing businesses. Written for staff who manage quality assurance

(QA) and quality control (QC) in breweries of all sizes, this book clearly sets out how quality management is integrated into every level of operation. Author Mary Pellettieri shows how quality management is a concept that encompasses not only the “free from defect” ethos but combines the wants of the consumer and the art of brewing good beer. Breweries must foster a culture of quality, where governance and management seamlessly merge policy, strategy, specifications, goals, and implementation to execute a QA/QC program. What tests are necessary, knowing that food safety alone does not signify a quality product, adhering to good management practice (GMP), proper care and maintenance of assets, standard operating procedures, training and investment in staff, and more must be considered together if a quality culture is to translate into success. The people

working at a brewery are the heart of any quality program. Management must communicate clearly the need for quality management, delineate roles and responsibilities, and properly train and assess staff members. Specialist resources such as a brewery laboratory are necessary if an owner wants to be serious about developing standard methods of analysis to maintain true-to-brand specifications and ensure problems are identified before product quality suffers. Staff must know the importance of taking corrective action and have the confidence to make the decision and implement it in a timely fashion. With so many processes and moving parts, a structured problem-solving program is a key part of any brewery's quality program. How should you structure your brewing lab so it can grow with your business? What chemical and microbiological tests are appropriate and

effective? How are new brands incorporated into production? How do you build a sensory panel that stays alert to potential drifts in brand quality? Which FDA and TTB regulations affect your brewery in terms of traceability and GMP? Can you conduct and pass an audit of your processes and products? Mary Pellettieri provides answers to these key organizational, logistical, and regulatory considerations.
