1. Magnifying the Surgical Field with an Operative Microscope. -- 2. Presurgical Considerations. -- 3. Endodontic Microsurgery Step by Step. -- 4. Postsurgical Considerations. -- 5.

Endodontics and Periodontics. -- 6. Treatment of Bone Defects in Apical Endodontic Microsurgery. -- 7. Treatment of Bone Defects in Nonendodontic Microsurgery. -- 8. Implantology. -- 9. Success Rate of Surgical Endodontics. Endodontic Microsurgery McGraw Hill Professional

This coherent presentation of clinical judgement, caring practices and collaborative practice provides ideas and images that readers can draw upon in their interactions with others and in their interpretation of what nurses do. It includes many clear, colorful examples and describes the five stages of skill acquisition, the nature of clinical judgement and experiential learning and the seven major domains of nursing practice. The narrative method captures

content and contextual issues that are often missed by formal models of nursing knowledge. The book uncovers the knowledge embedded in clinical nursing practice and provides the Dreyfus model of skill acquisition applied to nursing, an interpretive approach to identifying and describing clinical knowledge, nursing functions, effective management, research and clinical practice, career development and education, plus practical applications. For nurses and healthcare professionals. Health Service Quality Springer-Verlag This issue is a dedicated supplement published in addition to the regular issues of 'Cerebrovascular Diseases' focussing on one specific topic. 'Cerebrovascular Diseases' is a well-respected, international peer-reviewed

journal in Neurology. Supplement issues are included in the subscription.

Valuing Health Springer

A structured, evidence-based approach to neurosurgical decision-making for brain pathologies Evidence-based neurosurgery is one of the most important pillars upon which to build decision management pathways. Effective delivery of care involves understanding the natural history of the disease and the evidence behind available treatment options.

Neurosurgical Diseases: An Evidence-Based Approach to Guide Practice by esteemed neurosurgeons Leon T. Lai, Cristian Gragnaniello, and expert contributors covers cranial pathologies neurosurgeons commonly encounter in everyday practice. The book combines a

structured approach to evidence-based neurosurgery with expert opinions, analysis of up-to-date clinical data, understanding of patient preferences and values, and firsthand experiences to facilitate translation of evidence into clinical practice. Twenty-seven consistently formatted chapters are each dedicated to a different disease state, including brain tumors, cerebrovascular disease, Cushing's disease, traumatic brain injury, trigeminal neuralgia, and normal pressure hydrocephalus. All chapters include an introduction, current statistics and data, natural history of the pathology, selected papers for further reading, procedural options and outcomes, and recommended treatment protocols from the authors. Key Features Key content summarized in reader-

friendly bullets, diagrams, tables, and illustrative figures enhances acquisition of knowledge Discussion of new developments including treatment recommendations for primary and metastatic brain tumors Statistical data on cerebral aneurysm treatment outcomes and recommendations for treatment New protocols for treating head trauma, closed head injuries, and spontaneous intracranial hemorrhage This essential resource will help neurosurgical residents and junior neurosurgeons make challenging surgical treatment decisions for complex conditions, clearly and concisely and based on the best evidence.

Atlas of General Surgery Springer-Verlag Valuing Health provides a philosophically sophisticated overview of generic health

measurement systems, which clarifies their value commitments and criticizes their dependence on preference surveys to assign values to health states. In it, philosopher Daniel M. Hausman argues that the public value of health states depends on the activity limits and suffering that health states impose. *Evaluation Methods in Laboratory Medicine* Quintessence Publishing (IL) Plasma Medical Science describes the progress that has been made in the field over the past five years, illustrating what readers must know to be successful. As non-thermal, atmospheric pressure plasma has been applied for a wide variety of medical fields, including wound healing, blood coagulation, and cancer therapy, this book is a timely resource on the topics discussed. -

Provides a dedicated reference for this emerging topic - Discusses the state-of-the-art developments in plasma technology - Introduces topics of plasma biophysics and biochemistry that are required to understand the application of the technology for plasma medicine - Brings together diverse experience in this field in one reference text - Provides a roadmap for future developments in the area

The Criteria and Standards of Quality

The classic text in critical care medicine! The 3rd Edition of this classic text is streamlined and focused on the needs of the working critical care physician and features important new treatment strategies. Organized by organ systems, this text, the only critical care source

that includes evidence-based learning, guides physicians from initial patient assessment and differential diagnosis through therapeutic plan.

Prevention of Type 2 Diabetes Council of Europe

This study offers a systematic reconstruction of the theoretical foundations and framework of critical social theory. It is Habermas' "magnum opus", and it is regarded as one of the most important works of modern social thought. In this second and final volume of the work, Habermas examines the relations between action concepts and systems theory and elaborates a framework for analyzing the developmental tendencies of modern societies. He discusses in detail the work of Marx, Durkheim, G.H. Mead and

Talcott Parsons, among others. By distinguishing between social systems and what he calls the "life-world", Habermas is able to analyze the ways in which the development of social systems impinges upon the symbolic and subjective dimensions of social life, resulting in the kind of crises, conflicts and protest movements which are characteristic of advanced capitalist societies in the late-20th century.

The Theory of Communicative Action

Thieme

The Convention on Human Rights and Biomedicine, also referred to as the "Oviedo Convention", celebrated the 10th anniversary of its entry into force in 2009. This legally binding instrument aims to protect the integrity, dignity and identity of all human beings and

guarantees everyone, without discrimination, the respect for their rights and fundamental freedoms with regard to the application of biology and medicine. It shares with the European Convention on Human Rights the same underlying approach and many ethical principles, and provides a general framework for the protection of fundamental rights and freedoms in the field of biomedicine. The Oviedo Convention also addresses new challenges in biomedicine that are brought about by technological and scientific developments, making it a reference text for patient rights at the European level. The principles laid down in the Oviedo Convention were further developed and complemented in additional protocols in specific fields:

prohibition of cloning of human beings, transplantation of organs and tissues of human origin, and biomedical research and genetic testing for health purposes. Telestroke: the Use of Telemedicine in Stroke Care Edinburgh University Press This text answers the range of questions commonly raised and relates the long accepted standards which have governed professional behaviour to newly emerging situations. It aims to produce a tool for doctors, whilst recognizing that debate of ethical issues extends beyond the medical profession. Genetics of Melanoma John Wiley & Sons With the first coronary balloon angioplasty in 1977 came the challenge of the wound healing process of retenosis. Together these events spawned a new field of medicine,

vascular brachytherapy, conceived to resolve this leading complication of vascular intervention. In the ensuing 20 year quest to cure restenosis, radiation vascular therapy appears to be the next logical step, but it still needs validation. Just two years after the first edition, this second edition of Vascular Brachytherapy fulfils the promise to provide updated information about the meteoric progress made from recent collaborative investigations within this field. Migrating from ideas and pre-clinical observation to clinical practice, this second edition contains 48 new or revised chapters contributed by well known medical experts from widely disparate fields of medicine. Scientists, cardiologists, radiation safety officers, regulators, engineers and technicians

substantiate their observations with clinical and non-clinical data, basic radiation principles and issues from an economic, regulatory and safety perspective. Very little is known about the immediate patient risks, environmental concerns and long term pathobiological responses. For a field which is still in its honeymoon phase due to early technology success, this single volume will serve as a long-range educational tool and trace, giving the field of vascular brachytherapy the intense and continuous evaluation it deserves. For an audience of clinicians, scientists and researchers from all the represented medical disciplines, this book provides in depth information and exposure to subjects within these diverse areas of expertise.

Nancy and Visual Culture John Wiley & Sons

Das vorliegende Werk beschreibt umfassend den aktuellen Stand zu Simulationskonzepten in der Medizin. Das Buch richtet sich an Klinik- und Pflegedienstleitungen, Personalabteilungen, Verwaltungsleiter, Rettungsdienstorganisationen und Leiter von Simulations- und Trainingseinrichtungen bzw. an alle, die mit Simulation beginnen oder diese ausbauen möchten und praktische Fragen zur Implementierung und Umsetzung haben. Das interdisziplinäre Autorenteam mit langjähriger Erfahrung bei der Durchführung von Simulationsprogrammen informiert Sie mit vielen Tipps aus der Praxis wie Sie ein gutes pädagogisches Konzept

erstellen, die technischen Möglichkeiten nutzen können, um den wachsenden Qualitätsansprüchen an Lehre und Ausbildung gerecht zu werden und wie Sie durch Ihr Training die Patientensicherheit weiter erhöhen. Die 2. Auflage erscheint aktualisiert und um die Themen Simulation in der rettungsdienstlichen Ausbildung und Simulation in der Ausbildung der Pflegeberufe erweitert. Darüber hinaus thematisieren Experten, wie Forschung eingesetzt werden kann, um Simulationstrainings zu gestalten, und um Prozesse und Zusammenhänge zu analysieren, die anders schwer zu untersuchen wären. Auch der Qualifikation von Trainern ist nun ein eigenes Kapitel gewidmet.
Prehospital Trauma Care Distanz Editions

A compendium of basic data on pharmaceuticals produced and distributed in Germany. Includes address list of manufacturers and their products.
Rote liste Simon and Schuster ELSEVIER EMERGENCY richtet sich sowohl an Notfallsanitäter und Notärzte, wie auch an engagierte Rettungssanitäter und Rettungshelfer in der präklinischen Versorgung. Im Mittelpunkt der Heftinhalte steht Wissen von hoher Relevanz für die tägliche Arbeit im Rettungsdienst. Besonderes Augenmerk wird auf die interprofessionelle Zusammenarbeit mit den am Notfall beteiligten Berufsgruppen gelegt. Das Heft 03/2020 "Innovative Konzepte" stellt folgende innovative neue Techniken und Konzepte im Rettungsdienst vor: - ALIVE:

Prähospitales eCPR Programm Nürnberg
- Konzept des Intensivtransports in Bayern - MIC: Ein Konzept erweiterter Therapieoptionen Neben dem Leitthema sind zahlreiche weitere Fachartikel enthalten.

Essential Med Notes 2021 Wiley-Blackwell

Essential Med Notes is a clinical complement and resource for medical trainees. This 37th edition features substantial revisions to the main text, figures, graphics, and evidence-based medicine boxes of all 31 chapters across Primary, Medicine, and Surgery. Key Features Comprehensive medical textbook, concisely written, with in-depth coverage of 31 medical specialties comprehensively updated and edited by over 200 students and 100 staff/faculty.

Three separate volumes of the textbook – Primary, Medicine, and Surgery – provide readers with lighter, more portable books for their studies. Essential Med Notes website (essentialmednotes.com), which offers readers complementary colored atlases, practice questions, and other useful resources for each medical specialty. Common medical acronyms and abbreviations list included at the beginning of each textbook, as an easy-to-use reference and guide to the texts. The companion Clinical Handbook (included in this package) – a condensed and practical guide to common clinical problems seen in clinics, the OR, and hospital wards. This portable resource is essential for clerkship; it is the perfect resource to prepare you for all your

clinical rotations. The handbook includes the STAT Notes, which is a step-by-step approach to 30 common ward scenarios and the ultimate guide to managing on-call issues. The Clinical Handbook is included in this eBook package.

Neurosurgical Diseases Elsevier Health Sciences

Der entscheidende Einsatz bei Infarktalarm findet heute bereits im Notarztwagen statt. Ärzten und Rettungsassistenten bietet das Buch praxisgerechte Entscheidungshilfen und Anleitungen. Die Informationen umfassen Organisation, technischen Ausrüstung, rationale Diagnostik und Intervention, basierend auf den aktuellen Erkenntnissen internationaler Studien.

Principles of Critical Care, Third Edition

Oxford University Press, USA

This book describes how health service staff and managers can apply quality methods to the special circumstances of health services, and tackle the many conflicting demands on these services in the 1990s. It is based on applied research into quality methods in a range of public and commercial services, and explains the theory and the practice of the "service quality revolution."

Handbook of Reconstructive Flaps John Wiley & Sons

The core of this book is a set of five lectures delivered by Habermas at Princeton in 1971 under the title 'Reflections on the Linguistic Foundation of Sociology'. These lectures offer a preliminary view of what would become The Theory of Communicative Action,

and they form an excellent introduction to Habermas's ideas about communication and society. They lay out the general parameters of Habermas's project in an accessible way, and situate his work in relation to other theories of society, particularly those of Edmund Husserl, Wilfrid Sellars, and Ludwig Wittgenstein. Two additional essays elaborating the themes of the lectures are also included in this volume.

'Intentions, Conventions, and Linguistic Interactions' is an essay in the philosophy of action that focuses on the validity of social norms and examines the conceptual connections between rules, conventions, norm-governed action, and intentionality. 'Reflections on Communicative Pathology' addresses the question of deviant processes of

socialization and contains an analysis of the formal conditions of systematically distorted communication. This book was designed as a companion to *On the Pragmatics of Communication* (1998), which took pieces from Habermas's later work to create a systematic introduction to his theory of formal pragmatics. Simulation in der Medizin VCH Publishers This outstanding new atlas demonstrates the basics of surgery and illustrates 150 of the most frequent procedures in general surgery, covering the skin and soft tissues, the neck, the thoracic wall and thoracic cavity, the diaphragm, the trachea, the organs of the abdominal cavity, the retroperitoneum, the external genital organs, hernias, colorectal surgery, pediatric surgery, vascular surgery, amputations, and

traumatology. Each of the 150 operations is introduced by a clearly structured text facilitating easy and quick orientation. Exceptional full-color drawings with concise figure legends show each surgical procedure step-by-step. This atlas on general surgery is an invaluable reference for all surgeons in training and

in practice.
