*History of Modern Marathi Literature, 1800-1938* Concept Publishing Company

Monograph on public administration in Nepal - covers historical trends in administration under various governments and political systems since 1901. Bibliography pp. 365 to 383.

Maharashtra, Development Report Atlantic Publishers & Distri Report with reference to the state of Maharashtra, India.

Establishing HIV/AIDS Networks for Youth in Africa Penguin Books India

Analysis of political persecution and violation of human rights of the Sikhs in punjab.

**Some South Indian Butterflies** International Book Distributors Deals with the controversy in defining indigenous people and indogeneity. Discusses standard-setting activities in international law and ethno-nationalist interpretations in Asia, including 15 country profiles focusing on terms used, government positions, and recognized indigenous nationalities. Makes reference to the LO Indigenous and Tribal Populations Convention, 1957 (No. 107) and the ILO Indigenous and Tribal Peoples Convention, 1989 (No. 169).

*Village Panchayats in India* Cambridge University Press Sooraj and his grandma LOVE inventing! Join them on their latest adventure: using simple machines to make coconut barfi!

On the various social and human initiatives by Indian government.

**The Concept of Indigenous Peoples in Asia** Springer

It's the end of the road for Matt and Lauren Silver's tempestuous marriage. Matt is away from home. Again. Away from Lauren and their twin daughters. Tonight Lauren will take their children and leave him, and when Matt comes home early, he finds Lauren is

ready to go. Losing control, he bundles the children into his car and speeds away into the night. The tragedy that follows will haunt the survivors for ever. Lauren, crushed by guilt, takes refuge in drink. Her daughter, Freya, is so emotionally scarred that no one can reach her. No one except Sam Cobb, a man struggling with his own demons - and losing. When he reluctantly enters their shattered world he brings hope. Hope of recovery. Hope of reconciliation. Hope of redemption. But there comes a time when hope alone is not enough.

Geology of Himachal Pradesh IWGIA

The first-ever autobiography written by an Indian prime minister. Only once in a lifetime comes a book that simply must be read! An absorbing, authentic and definitive account, by a former prime minister, of crucial events that had a significant impact on the nation's destiny after independence. I K Gujral has penned his life story in a forthright and candid manner. He entered the political fray as a freedom fighter in the British era, and after the tumultuous events that rocked the Indian subcontinent in the wake of the partition in August 1947, crossed over from Pakistan to India, where he had to begin life from scratch. Despite facing tremendous odds, on the basis of his perseverance, resilience and never-say-die attitude, Gujral's achievements allowed him to witness and shape India's contemporary history. Gujral joined Congress Party and was first elected to the Rajya Sabha in 1964. He was the Information and Broadcasting Minister when emergency was imposed, which entailed arbitrary press censorship. Since he refused to bow down to the de facto powers, he was unceremoniously replaced and later sent by Indira Gandhi as India's ambassador to the USSR, a post he handled with commendable tact and finesse. After his stint in Moscow, he returned to India and re-entered the 'political whirlpool' by joining the Janata Dal. He became minister for external affairs under V P Singh (1989) and Deve Gowda (1996). Gujral reached the pinnacle of his career when he became the prime minister on 1997. During his priministership, despite the exigencies and pressures of running a coalition government, he endeavoured to achieve progress in many spheres. The Gujral Doctrine (a set of five principles to guide the conduct of foreign relations with India's immediate neighbours) was widely acclaimed in both India

and the West. This volume, a valuable addition to the literature on contemporary history, provides a deep insight into the political scene as it unfolded after independence and delineates the roles played by a wide spectrum of politicians, bureaucrats, and many others.

**DSST Principles of Financial Accounting DANTES Study Guide - Ace the CLEP** Ajanta Books International

The physically handicapped military genius Miles Vorkosigan investigates an act of treachery against the domed planet of Komarr.

**Allah Will Protect Me** Academic Foundation

**Towards a New India** Lindhardt og Ringhof

In a revised edition of his original book, J. S. Grewal brings the history of the Sikhs from its beginnings in the time of Guru Nanak, the founder of Sikhism, right up to the present day. Against the background of the history of the Punjab, the volume surveys the changing pattern of human settlements in the region until the fifteenth century and the emergence of the Punjabi language as the basis of regional articulation. Subsequent chapters explore the life and beliefs of Guru Nanak, the development of his ideas by his successors and the growth of his following. The book offers a comprehensive statement on one of the largest and most important communities in India today.

*Hindu Vishva* NBT India

Abatement of Environmental Pollutants: Trends and Strategies addresses new technologies and provides strategies for environmental scientists, microbiologists and biotechnologists to help solve problems associated with the treatment of industrial wastewater. The book helps readers solve pollution challenges using microorganisms in bioremediation technologies, including discussions on global technologies that have been adopted for the treatment of industrial wastewater and sections on the lack of proper management. Moreover, limited space, more stringent waste disposal regulations and public consciousness have made the present techniques expensive and impractical. Therefore, there is an urgent need to develop sustainable management technologies for industries and municipalities. To remove the damaging effect of organic pollutants on the environment, various

new technologies for their degradation have been recently discovered. - Covers bioremediation of petrochemical pollutants, such as Benzene, Toluene, Xylene, Ethyl Benzene, and phenolic compound - Includes discussions on genetic engineering microbes and their potential in pollution abatement - Contains information on plant growth promoting bacteria and their role in environment management

**Organic Produce Supply Chains in India (CMA Publication No. 222)** Elsevier

The reason to perform calculations in material science usually falls into one of two categories: to predict or explain the origin of material properties. This thesis covers first-principle calculations for solids at extreme conditions, from both of the two mentioned categories. I primarily have studied the effects of high-pressure and high-temperature on lattice dynamics, mechanical and electronic properties. To treat the effects of temperature, ab initio molecular dynamics (AIMD) simulations and self-consistent phonon calculations, based on density functional theory, have been utilised. These approaches account for the temperature effects by considering thermally excited supercells as samples of a statistical ensemble. To extract properties from this representation, I have used methods which maps the supercell data to a unit cell representation or fits it to a simple model Hamiltonian. The small displacement method was used to analyse the dynamical stability for nitrides and polymorphs of silica, synthesised at high-pressure in a diamond anvil cell. The nitride

compounds consist of a high amount of nitrogen either as chains, forming a porous framework together with transition metal atoms or as dinitrogen molecules, occupying the channels of the framework. The nitrogen chains consist of single- or double-bonded nitrogen atoms, making these compounds highly energetic. Polymorphs of silica can be used to model deep Earth liquids. These new polymorphs, named coesite-IV and coesite-V, consist of four-, five-, and six-oriented silicon. Some of the octahedra of the six-oriented silicon atoms, of these new phases, are sharing faces, which according to Pauling's third rule would make them highly unstable. My phonon calculations indicate these phases to be dynamically stable. Furthermore, my calculations predict higher compressibility for these new phases compared to the competing ones. By modelling silicate melts with coesite-IV and coesite-V, a more complex and compressible structure is expected, affecting the predicted seismic behaviour. I studied Kohn anomalies for body-centered cubic niobium by simulating this material with self-consistent phonon calculations. The electronic structure was studied by using a band unfolding technique, for which I obtained an effective unit cell representation of the electronic structure at elevated temperatures. Temperature primarily smeared the electronic states but did not induce significant shifts of the bands. In parallel, the anharmonicity of this system was studied using the temperature dependent effective potential method. Even close to the melting temperature, this element is remarkably harmonic. The experimentally observed disappearance of the Kohn anomalies with increased temperature is predominantly dependent, according to my calculations, on the temperature-induced smearing of the electronic states. Using stress-strain relations, accurate high-temperature elastic properties were predicted for  $\text{Ti}_0.5\text{Al}_0.5\text{N}$ . The simulations were performed with AIMD. The stresses were fitted using the least-squares method to a linear expression from which the elastic constants were derived. The results were compared with previously performed calculations that employed additional approximations. The results of the symmetry imposed force constant temperature dependent effective potential (SIFC-TDEP) method agrees well with our results. I also compared my results with TiN calculations that employed a similar methodology. My and the SIFC-TDEP results are reporting lower values for the polycrystalline moduli than the

calculations for TiN. The data I generated were also used for a machine learned interatomic potential method, where moment tensor potentials were trained and evaluated, using this data. Den här avhandlingen handlar om beräkningar för material. När materialberäkningar utförs är det antingen för att förutsäga eller förklara egenskaper. De beräkningar som jag har gjort i denna avhandling är baserade på fundamentala fysiska lagar. Detta betyder att de är rent baserade på teori, och inte har anpassats efter resultat av experiment. Jag har i mitt arbete använt mig mycket utav en teori som kallas gitter dynamik. Den är definierad för periodiska material, det vill säga att atomerna i dessa material upprepas i periodiska mönster. Vi kan då anta att det finns en jämviktspunkt för alla atomerna, som de vibrerar omkring. Dessa vibrationer kan beskrivas som om atomerna påverkar varandra med fiktiva fjädrar. Genom att beräkna styrkan för dessa fjädrar kan vi beskriva vibrationerna av atomerna. Dessa vibrationer i sin tur är avgörande för materialets egenskaper. För att beskriva ett material vid en specifik temperatur har jag använt mig utav olika metoder för att simulera det. En simulering kan ses som ett "dator experiment". Problemet är dock hur vi ska mäta egenskaperna i simuleringen. Ju större och mera komplex en simulering är, desto svårare blir det att beräkna egenskaperna av det simulerade materialet. Vi hamnar i en situation likt den vi skulle befinna oss om vi hade gjort ett experiment i verkligheten, och tvingas använda förenklade modeller för att kunna tolka resultatet. Jag har därför använt mig utav metoder för att utvinna vibrationer av atomer, elektrontillstånd eller elastiska egenskaper, specifikt utvecklade för att användas på denna typ utav simuleringar. Mitt arbete har kretsat kring hur dessa egenskaper påverkas av extrema temperaturer och tryck. De beräkningar jag har utfört vid höga tryck har varit för nyupptäckta nitrider och faser av kiseldioxid. Nitriderna är porösa material som innehåller en stor mängd kväve. Det höga kväveinnehållet gör så att det lagras en stor mängd kemisk energi i enkel- och dubbelbindningar mellan kväveatomerna. De nya faserna av kiseldioxid har en betydelse för vår förståelse av jordens inre. Deras existens öppnar upp för att det kan finnas mera komplexa och ihoptryckbara flytande material, under jordens nedre mantel, än vad tidigare har varit antaget. Mina beräkningar har bekräftat strukturerna för dessa nyupptäckta material. Vid höga temperaturer har jag studerat för metallen niob hur vibrationerna

av atomerna är relaterade till olika elektrontillstånd. För specifika vibrationer ökar frekvensen med ökad temperatur. Detta är något ovanligt eftersom vibrationernas frekvenser vanligtvis brukar minska med ökad temperatur. Mina simulering för denna metal överensstämmer med resultat från experiment. Orsaken till varför visa vibrationers frekvenser ökar kan jag förklara med att elektrontillståndens enskilda energier varierar över tid på grund av den ökade temperaturen. Jag har även använt mig av simuleringar för att beräkna elastiska egenskaper av legeringen Ti0.5Al0.5N. Ti1?xAlxN legeringar används som beläggningar på skärverktyg som används för metall. För att öka effektiviteten av beläggningen, behövs det detaljerad kunskap av dess mekaniska egenskaper för den temperatur som de används vid. Jag beräknade därför så noggrant som möjligt de elastiska egenskaperna för Ti0.5Al0.5N. Dessa beräkningar är avsedda för att användas som en referens för andra beräkningsmässigt billigare metoder. Datan som genererades från mina simuleringar användes även för en sådan metod, baserad på maskininlärning.

#### **The Microcredit Business and Women's Empowerment in India** Hay House, Inc

This book offers an assessment of the performance, impact, and welfare implications of the world's largest employment guarantee programme, the Mahatma Gandhi National Rural Employment Guarantee Act (MGNREGA). Launched by the Indian government, the programme covers entire rural area of the country. The book presents various micro-level analyses of the programme and its heterogeneous impacts at different scales, almost a decade after its implementation. While there are some doubts over the future of the scheme as well as its magnitude, nature and content, the central government appears committed to it, as a 'convergence scheme' of various other welfare and rural development programmes being implemented at both national and state level.

The book discusses the outcomes of the programme and offers critical insights into the lessons learnt, not only in the context of India, but also for similar schemes in countries in South and South-East Asia as well as in Africa, and Latin America. Adopting inter-disciplinary perspectives in analysing these issues, this unique book uses a judicious mix of methods---integrating quantitative and qualitative tools---and will be an invaluable resource for analysts, NGOs, policymakers and academics alike. **The Sikhs of the Punjab** The Administrative System of Nepal This book examines the production, procurement and marketing aspects of the organic produce sector with the focus on marketing agencies and producers in each commodity/product chain. It analyses the various institutional arrangements like contract farming, networking and producer level co-ordination prevalent in this sector. Based on case studies of various type of organic players in India, both in export market as well as in domestic market.

Passing a DANTES / DSST test is easier than you think when you are studying with one of our proven study guides. Our study guide is easy to understand and teaches you the information that you need to know to pass your DANTES / DSST test. Designed especially for students, this DANTES / DSST study guide will prepare you to pass with limited time. We teach you only what you need to know to pass the test. Weve created and included the perfect amount of test questions to get you prepared but not overwhelmed. In no time at all youll be ready to take your DANTES / DSST test.

#### Employment Guarantee Programme and Dynamics of Rural Transformation in India RajRAS

It is well known that the impacts of climate change are tangible and hence there can be no debate about the need for appropriate adaptation measures, on a priority basis. However, it is equally

important to recognize the fact that adaptation measures actually represent a dynamic synthesis of interventions pertaining to multiple systems. These are particularly of water, soil characteristics, genotypic and phenotypic variations and their expressions, age-correlated biochemical changes aligned with planting schedules and favorable weather/climate conditions. Nutrients, occurrence and distribution of associated vegetation including crop mixes also influence productivity. The overarching aspect of farming practice wield significant influence on the outcome and hence it is important to be clear about the particular focus of the investigations being carried out and reported in a suitable manner. It is essential to recognize that scientific research in agriculture in India has always produced valuable results of direct relevance to her people. Importantly, preparedness to tackle disasters due to inclement weather system has prominently featured on the agenda. The recent focus on climate change and impacts has provided the necessary impetus to reorganize the framework of investigation to capture the specifics of such impacts. In this context, the importance of micro climate variations too viz-a-viz the larger scales of impacts cannot be overemphasized. It will be useful to also help characterize natural variations versus artificially induced variations, helping us understand the complexities of individual and synergistic impacts too. Obviously, the limits and limitations of models could determine the spread and depth of the outcomes of investigations. Empirical evidences to reinforce assumptions have to also be documented with utmost care; guided by an understanding of the limits of tolerance, limiting factors, and the precautionary principle especially in the public policy interface. The present volume therefore, showcases these strands with the fond hope that they will stimulate further thinking and enable appropriate action.
