EDWARDS LIZETH

The Siberian World Springer
 Latin America is moving toward democracy. The region's countries hold elections, choose leaders, and form new governments. But is the civilian government firmly in power? Or is the military still influencing policy and holding the elected politicians in check under the guise of guarding against corruption, instability, economic uncertainty, and other excesses of democracy? The editors of this work, Brian Loveman and Thomas M. Davies, Jr., argue that with or without direct military rule, antipolitics persists as a foundation of Latin American politics. This study examines the origins of antipolitics, traces its nineteenth- and twentieth-century history, and focuses on

the years from 1965 to 1995 to emphasize the somewhat illusory transitions to democracy. This third edition of *The Politics of Antipolitics* has been revised and updated to focus on the post-Cold War era. With the demise of the Soviet state and international Marxism, the Latin American military has appropriated new threats including narcoterrorism, environmental exploitation, technology transfer, and even AIDS to redefine and relegate its role in social, economic, and political policy. The editors also address why and how the military rulers acceded to the return of civilian-elected governments and the military's defense against accusations of human rights abuses.

 An essential introduction to data analysis techniques using spreadsheets, for undergraduate and graduate students.

Morphotactics Springer
 This comprehensive treatment of several phenomena in Distributed Morphology explores a number of topics of high relevance to current linguistic theory. It examines the structure of the syntactic and postsyntactic components of word formation, and the role of hierarchical, featural, and linear restrictions within the auxiliary systems of several varieties of Basque. The postsyntactic component is modeled as a highly articulated system that accounts for what is shared and what exhibits variation across Basque dialects. The emphasis is on a principled ordering of postsyntactic operations based on their intrinsic properties, and on the relationship between representations in the Spellout component of grammar with other grammatical modules. The analyses in the book treat related phenomena in other languages and thereby have much

to offer for a general morphology readership, as well as those interested in the syntax-morphology interface, the theory of Distributed Morphology, and Basque.

KING & ANTS Springer

The Siberian World provides a window into the expansive and diverse world of Siberian society, offering valuable insights into how local populations view their environments, adapt to change, promote traditions, and maintain infrastructure. Siberian society comprises more than 30 Indigenous groups, old Russian settlers, and more recent newcomers and their descendants from all over the former Soviet Union and the Russian Federation. The chapters examine a variety of interconnected themes, including language revitalization, legal pluralism, ecology, trade, religion, climate change, and co-creation of practices and identities with state programs and policies. The book's ethnographically rich contributions highlight Indigenous voices, important theoretical concepts, and practices. The material connects with wider discussions of perception of the environment, climate change, cultural and linguistic change, urbanization, Indigenous rights, Arctic politics, globalization, and sustainability/resilience. The Siberian World will be of interest to scholars from many disciplines, including Indigenous studies, anthropology, archaeology, geography, environmental history, political science, and sociology. Chapter 25 of this book is freely available as a downloadable Open Access PDF at <http://www.taylorfrancis.com> under a Creative Commons Attribution-Non Commercial-No Derivatives (CC-BY-NC-ND) 4.0 license.

Storm Water Management for Construction Activities Založba ZRC

This book focusses on the different types of immunotherapeutics that are currently being used and developed for the treatment of melanoma. In recent years, immunotherapy has revolutionized the treatment of metastatic melanoma and other types of cancer. Discussing treatment options for melanoma and the

success of immunotherapy along with the challenges of immunotherapy, this book covers epidemiology, susceptibility genes, and treatment recommendations from Society for Immunotherapy of Cancer, as well as immune based therapies such as aldesleukin, Intron-A, Sylatron, Yervoy, Opdivo, Keytruda, Imlygic, DC vaccines and adoptive cell therapy. The detailed information included on the key immune cells involved in anti-tumor immune response and immune-inhibitory mechanisms in tumor microenvironment will aid the understanding of tumor immunology. Both academic as well as industry-based researchers, developing novel anti-cancer therapies, will also benefit from the details of promising molecular targets and immunotherapeutic strategies under investigation. With 132 illustrations including synopsis tables for important information, over 1200 references (majority of which are openly accessible) and details of more than 150 ongoing clinical trials, this book is a valuable source of information for health care providers as well as cancer biologists interested in learning about melanoma and the significant advances made by immunotherapy.

The House Sparrow BRILL

Monografija predstavlja bogastvo zgodovinskih kartografskih upodobitev slovenskega ozemlja. V grobem je razdeljena v dva dela. V besedilnem delu so predstavljeni zgodovina evropske kartografije do konca 19. stoletja, kartografski prikazi slovenskega ozemlja do začetka 20. stoletja ter zemljevidi kot kulturna dediščina. Kartografski del monografije pa prinaša kronološki prikaz pomembnejših starih zemljevidov slovenskega ozemlja. Predstavljeni so zemljevidi od srede 16. stoletja, ko so nastala prva samostojna kartografska dela današnjega slovenskega ozemlja, do začetka 20. stoletja, ko se kartografija razvije v sodobno vedo. Namen monografije ni obsežna predstavitev posameznih zemljevidov, temveč predstavitev slovenske kartografske dediščine.

Occupational skin diseases are a field of increasing interest in today's dermatology. Due to rapid developments in several areas of modern industry, new dermatological problems constantly occur amongst workers. The 1st edition of this Handbook of Occupational Dermatology was published in 2000 and has served as the main reference book of occupational skin diseases for general and occupational dermatologists and occupational

physicians. The new edition is completely revised, updated and extended with respect to new developments. The layout allows for both quick access to practical information and in-depth reading. Included are concise tables, algorithms and figures on how to optimize the diagnostic procedure for daily patient management and expert opinion. The new edition will continue the success as major source of reference for clinical and experimental work in the field of occupational skin diseases, both for students and experts. Center for Basque Studies Press

This practical guide offers an accessible introduction to the principles of MRI physics. Each chapter explains the why and how behind MRI physics. Readers will understand how altering MRI parameters will have many different consequences for image quality and the speed in which images are generated. Practical topics, selected for their value to clinical practice, include progressive changes in key MRI parameters, imaging time, and signal to noise ratio. A wealth of high quality illustrations, complemented by concise text, enables readers to gain a thorough understanding of the subject without requiring prior in-depth knowledge.

The Handbook of Bilingualism MetroBooks

From the mid-sixteenth to the mid-nineteenth century Russia was transformed from a moderate-sized, land-locked principality into the largest empire on earth. How did systems of information and communication shape and reflect this extraordinary change? *Information and Mechanisms of Communication in Russia, 1600-1850* brings together a range of contributions to shed some light on this complex question. Communication networks such as the postal service and the gathering and circulation of news are examined alongside the growth of a bureaucratic apparatus that informed the government about its country and its people. The inscription of space is considered from the point of view of mapping and the changing public 'graphosphere' of signs and monuments. More than a series of institutional histories, this book is concerned with the way Russia discovered itself, envisioned itself and represented itself to its people. Innovative and scholarly, this collection breaks new ground in its approach to communication and information as a field of study in Russia. More broadly, it is an accessible contribution to pre-modern information studies, taking as its basis a country whose history often serves to challenge habitual Western models of development. It is important reading not only for specialists in Russian Studies, but

also for students and non-Russianists who are interested in the history of information and communications.

The Sava River Springer Science & Business Media

The Handbook of Bilingualism provides state-of-the-art treatments of the central issues that arise in consideration of the phenomena of bilingualism ranging from the representation of the two languages in the bilingual individual's brain to the various forms of bilingual education, including the status of bilingualism in each area of the world. Provides state-of-the-art coverage of a wide variety of topics, ranging from neuro- and psycho-linguistic research to studies of media and psychological counseling. Includes latest assessment of the global linguistic situation with particular emphasis on those geographical areas which are centers of global conflict and commerce. Explores new topics such as global media and mobile and electronic language learning. Includes contributions by internationally renowned researchers from different disciplines, genders, and ethnicities.

Kanerva's Occupational Dermatology
Cambridge University Press

This book is the first cross-linguistic study of clausal negation based on an extensive and systematic language sample. Methodological issues, especially sampling, are discussed at length. Standard negation – the basic structural means languages have for negating declarative verbal main clauses – is typologized from a new perspective, paying attention to structural differences between affirmatives and negatives. In symmetric negation affirmative and negative structures show no differences except for the presence of the negative marker(s), whereas in asymmetric negation there are further structural differences, i.e. asymmetries. A distinction is made between constructional and paradigmatic asymmetry; in the former the addition of the negative marker(s) is accompanied by further structural differences in comparison to the corresponding affirmative, and in the latter the correspondences between the members of (verbal etc.) paradigms used in affirmatives and negatives are not one-to-one. Cross-cutting the constructional-paradigmatic distinction, asymmetric negation can be further divided into subtypes according to the nature of the asymmetry. Standard negation structures found in the 297 sample languages are exemplified and discussed in detail. The frequencies of the different types and

some typological correlations are also examined. Functional motivations are proposed for the structural types – symmetric negatives are language-internally analogous to the linguistic structure of the affirmative and asymmetric negatives are language-externally analogous to different asymmetries between affirmation and negation on the functional level. Relevant diachronic issues are also discussed. The book is of interest to language typologists, descriptive linguists and to all linguists interested in negation.

In 732 major articles, Raymond Howgego's

Encyclopedia of Exploration 1800 to 1850

attempts to detail every significant

traveller, voyager or expedition that set

out during the period. Its indexes provide

the names of over 3000 travellers and

1000 ships, while the bibliographies cite

more than 10,000 works of reference.

Extensive biographical information is

included for the travellers themselves,

placing every expedition thoroughly in its

historical context. The text is fully cross-

referenced between articles, whilst every

article is supplemented by a

comprehensive bibliography of both

primary and secondary sources.

A Charismatic Theology Springer

"[An] extraordinary book. . . . Mr. Gould is

an exceptional combination of scientist

and science writer. . . . He is thus

exceptionally well placed to tell these

stories, and he tells them with fervor and

intelligence."—James Gleick, New York

Times Book Review High in the Canadian

Rockies is a small limestone quarry formed

530 million years ago called the Burgess

Shale. It holds the remains of an ancient

sea where dozens of strange creatures

lived—a forgotten corner of evolution

preserved in awesome detail. In this book

Stephen Jay Gould explores what the

Burgess Shale tells us about evolution and

the nature of history.

Information and Empire HarperCollins

Morocco is one of the most fascinating

lands in the world from the point of view of

its geological structure and evolution. Our

knowledge on the geology of the country

has been greatly improved during the last

decades, based on numerous seismic

profiles and boreholes, seismological

analysis of focal mechanisms, seismic

tomography, gravimetric/geodetic

modelling and, on the other hand, based

on a big National Program of Geological

Mapping including modern geochemical

analyses (trace elements) and reliable

isotopic datings (39Ar-40Ar, U-Pb zircon,

Sm-Nd, etc). Moreover, a number of

academic studies have been performed in

relation with the increasing number of

Moroccan universities. Accordingly, there

was an utmost urgency to undertake a

new treatise of Moroccan geology which

could substitute for the classical *Éléments*

de géologie marocaine, published in 1976

by A. Michard in the *Notes et Mémoires du*

Service géologique du Maroc (re-edited

twice since 1976, with more than 6000

copies sold, and... translated in Japanese

for engineers!). A new treatise has been

prepared between April 2006 and July

2007 under the coordination of A. Michard,

assisted by O. Saddiqi, and A. Chalouan,

by a wide panel of authors from Morocco,

France or Belgium among the best

connoisseurs of the country. In order to

emphasize the general interest of the

book, we finally retain the following title:

Continental Evolution: The Geology of

Morocco. Structure, Stratigraphy, and

Tectonics of the Africa-Atlantic-

Mediterranean Triple junction. The editing

and production of this book was supported

by the following organisations: The

Geological Society of France (SGF) The

National Office of Hydrocarbons and Mines

of Morocco (ONHYM) The International

Lithosphere Program (ILP)
