Natural Toxicants in Feeds and Poisonous Plants

Routledge

The United Nations World Water Assessment Programme (WWAP) is hosted and led by UNESCO. WWAP brings together the work of 31 UN-Water Members and 38 Partners to publish The United Nations World Water Development Report, (WWDR) series. The annual World Water Development Reports focus on strategic water issues. UN-Water Members and Partners, all experts in their respective fields, contribute the latest findings on a specific theme. The 2017 edition of the World Water Development Report focuses on 'Wastewater' and seeks to inform decision-makers, inside and outside the water community, about the importance of managing wastewater as an undervalued and sustainable source of water, energy, nutrients and other recoverable by-products, rather than something to be disposed of or a nuisance to be ignored. The report's title - Wastewater: The Untapped Resource - reflects the critical role that wastewater is poised

to play in the context of a circular economy, whereby economic development is balanced with the protection of natural resources and environmental sustainability, and where a cleaner and more sustainable economy has a positive effect on the water quality. Improved wastewater management is not only critical to achieving the Sustainable Development Goal on clean water and sanitation (SDG 6), but also to other goals of the 2030 Agenda for Sustainable Development.

Global Marine Pollution

Little, Brown Books for Young Readers

Heavy metal phytotoxicity has been known for more than a century. However, research in the past years has confirmed the immense damage by metal pollution to plants, the soil and ultimately to humans. By reviewing both field and laboratory work, this book deals with the various functional and ecological aspects of heavy metal stress on plants and outlines the scope for future research and the possibilities for remediation.

Fred Gets Dressed

Springer

A concise assessment of the risks to human health

and the environment posed by 3,3'-dichlorobenzidine, a chemical used primarily as an intermediate in the manufacture of pigments for printing inks, textiles, paints, and plastics. The document is part of a new series of brief reports aimed at the characterization of hazards and dose-response for exposure to selected industrial chemicals. With this goal in mind, documents in the series focus on studies and findings considered critical for risk characterization. Several properties of 3,3'-dichlorobenzidine, including its relatively low volatility, very short persistence, and low concentrations in the atmosphere support the conclusion that the chemical will not contribute to the greenhouse effect depletion of the ozone layer or the formation of ground-level ozone. The assessment of toxic effects in experimental animals found sufficient evidence of carcinogenicity in several species, and substantial evidence of genotoxicity. The very limited epidemiological studies were considered inadequate to assess the

chemical's carcinogenicity to humans."

Climate Change and Arctic Sustainable Development A V I

Publishing Company

The degradation of ecosystems, including forests, and the associated loss of biodiversity, particularly due to human-induced threats and climate change, has gained increased attention from scientists and policymakers. The Millennium Ecosystem Assessment presented a new conceptual framework that puts ecosystem services at the centre and links human well-being to the impacts on ecosystems of changes in natural resources. The Economics of Ecosystems and Biodiversity initiative drew further attention to the economic benefits of conserving ecosystems and biodiversity, supporting the idea that economic instruments – if appropriately applied, developed and interpreted – can inform policy- and decision-making processes. Only a few ecosystem services, however, have explicit market value and are traded in open markets: many – especially those categorized as having “passive-use” value –

remain invisible and are rarely accounted for in traditional economic systems. The failure to appropriately consider the full economic value of ecosystem services in decision making enables the continued degradation and loss of ecosystems and biodiversity. Most ecosystem services are considered public goods and tend to be overexploited by society. Many methods have been applied to the economic valuation of ecosystem services. The use of these methods, as well as the interpretation of their results, requires familiarity with the ecological, political, normative and socio-economic context and the science of economics. Recognizing, demonstrating and capturing the value of ecosystem services can play an important role in setting policy directions for ecosystem management and conservation and thus in increasing the provision of ecosystem services and their contributions to human well-being. The aim of this manual is to enhance understanding of ecosystem services and their valuation. The specific target group comprises governmental

officers in planning units and field-level officers and practitioners in key government departments in Bangladesh responsible for project development, including the Ministry of Environment and Forests and its agencies. Most of the examples and case studies presented herein, therefore, are tailored to the Bangladesh context, but the general concepts, approaches and methods can be applied to a broad spectrum of situations. This manual focuses on valuing forest-related ecosystem services, including those provided by trees outside forests. It is expected to improve valuation efforts and help ensure the better use of such values in policymaking and decision making. Among other things, the manual explores the basics of financial mathematics (e.g. the time value of money; discounting; cost-benefit analysis; and profitability and risk indicators); the main methods of economic valuation; examples of the valuation of selected ecosystem services; and inputs for considering values in decision making. UNESCO Publishing Named a Best Book of the Year by The Times (UK) and the Los Angeles

Public Library Winner of the 2018 Goncourt Prize, this poignant coming-of-age tale captures the distinct feeling of summer in a region left behind by global progress. August 1992. One afternoon during a heatwave in a desolate valley somewhere in eastern France, with its dormant blast furnaces and its lake, fourteen-year-old Anthony and his cousin decide to steal a canoe to explore the famous nude beach across the water. The trip ultimately takes Anthony to his first love and a summer that will determine everything that happens afterward. Nicolas Mathieu conjures up a valley, an era, and the political journey of a young generation that has to forge its own path in a dying world. Four summers and four defining moments, from "Smells Like Teen Spirit" to the 1998 World Cup, encapsulate the hectic lives of the inhabitants of a France far removed from the centers of globalization, torn between decency and rage.

Urban Agriculture in West Africa: Contributing to Food Security and Renewable Energy UNEP/Earthprint
Recent advances in biochemistry and biotechnology have enabled significant progress in basic research on carbohydrate-active enzymes and advances in their effective application. The mechanism of catalytic reaction of carbohydrate-active enzymes is not fully understood, though, as they often show unusual substrate specificity and modes of action. This comprehensive collection summarises some of the most important research in the field of carbohydrate-active enzymes, focusing on the enzymatic reaction mechanism, structure-function relationship and role in the living organism. The book is based on papers presented in the 2008 Agricultural Biotechnology Symposium Carbohydrate-active enzymes: structure, function and applications held on September 26th-27th 2008 in Seoul National University, Korea. This symposium was organized by the

Center for Agricultural Biomaterials, Seoul National University, Korea, which has organized symposia on agricultural biotechnology annually since 1990. Many important results on new types of carbohydrate-active enzymes and their applications have been reported at these meetings. Papers in Part one of this collection focus on structure-function relationships of carbohydrate-active enzymes. Papers in Part two discuss functions and applications of carbohydrate-active enzymes, such as enzymes for grain processing and glycosidases and their mutants as useful tools for glycoside synthesis. With its distinguished editor and international team of contributors, Carbohydrate-active enzymes: structure, function and applications is an essential reference for research scientists, post-graduate students and those in the food industry with an interest in enzymes. Summarises some of the most important research in the field of carbohydrate-active enzymes. Covers topics ranging from enzyme classification and

structural elucidation to applications of enzymes in food processing and other industries

Heavy Metal Stress in Plants Elsevier

The era of chemical and biological megadeath is upon us, and the potential of deadly biowarfare attacks from governments, militant independent groups, and even individuals is far greater than it has been at any time in the past. At this time, more than twenty-five countries are developing, or have stockpiles of chemical and biological weapons, in many cases in sufficient quantities to wipe out the entire population of the world. So far the danger of chemical and biological aggression has been little acknowledged, and, at least in America, little prepared for by federal and local government. Most terrorist threats and attacks are not widely reported in the mainstream media. Although information about the proliferation of man-made diseases is carefully suppressed by governments and the media they will be covered in the pages of this book. Not only is America unprepared and ignorant of what is happening, but the people

in government and scientific professions who do know, who should be warning the American public about the dangers of chemical and biological terrorism, are instead doing their utmost to hide this information from us; information that is vital for our survival. The information that is contained in the pages of this book will not be measured or calculated to reassure people that everything is fine, when reassurance is the exact opposite of what is needed at this time. It may even give you nightmares when you realise the real circumstance that we are in. The information in the pages that follow will be the truth about the biowarfare threat to America.

The United Nations world water development report, 2017 Academic Press

Bill Bluster, founder and visionary behind the oddball Bluster Space Entertainment, LLC, sees an opportunity. When a pink asteroid is stopped short of striking earth's 15th colony Syphus, he puts in a bid and snaps it up. Now in his possession, he's not sure what to do with it. How does one go about promoting a pink

asteroid that doesn't look the least bit menacing? By promising a gay, old time, of course!

Approximately 1,000 words.

Maintenance of Nuclear Power Plants IDRC

From a New York Times bestselling author and Caldecott-honor winning artist comes an exuberant illustrated story about playing dress up, having fun, and feeling free. The boy loves to be naked. He romps around his house naked and wild and free. Until he romps into his parents' closet and is inspired to get dressed. First he tries on his dad's clothes, but they don't fit well. Then he tries on his mom's clothes, and wow! The boy looks great. He looks through his mom's jewelry and makeup and tries that on, too. When he's discovered by his mother and father, the whole family (including the dog!) get in on the fun, and they all get dressed together. This charming and humorous story was inspired by bestselling and award-winning author Peter Brown's own childhood, and highlights nontraditional gender roles and self-expression.

Extracting Bioactive Compounds for Food Products UNESCO

Recently, the electrotechnologies based on the effects of pulsed electric fields (PEF), such as ohmic heating (OH) and DC electric field, have gained real interest in the field of food processing. These techniques efficiently enhance methods of extraction from food plants and dehydration of biosolids. The PEF and pulsed OH techniques preserve the nutritional, functional, structural and sensory properties of products better than conventional extraction technologies. The electrofiltration and electro-osmotic dewatering can be very effective for the separation of bioproducts and dehydration of food wastes. The first source book in the field, this book gives an overview the fundamental principles of electrical techniques, electrophysical properties of foods and agricultural products, application of various emerging electrotechnologies for enhancing the solid-liquid separation and drying processes, extraction techniques of pigments, processing methods of different in-plant tissues and biosolids, electro-osmotic dewatering and electrofiltration of biomaterials, recent

industrial- scale gains, and other aspects. Each chapter is complementary to other chapters and addresses the latest efforts in the field.

Biowarfare in America
Other Press, LLC

This four-volume set, edited by a leading expert in the field, brings together in one collection a series of papers that have been fundamental to the development of renewable energy as a defined discipline. Some of the papers were first published many years ago, but they remain classics in their fields and retain their relevance to the understanding of current issues. The papers have been selected with the assistance of an eminent international editorial board. The set includes a general introduction and each volume is introduced by a new overview essay, placing the selected papers in context. The range of subject matter is considerable, including coverage of all the main renewable technologies, the fundamental principles by which they function, and the issues around their deployment such as planning, integration and socio-economic assessment. Overall, the set provides

students, teachers and researchers, confronted with thousands of journal articles, book chapters and grey literature stretching back decades, with a ready-made selection of and commentary on the most important key writings in renewable energy. It will be an essential reference for libraries concerned with energy, technology and the environment.

And Their Children After Them

Bernan Press(PA)

This volume examines contemporary Africa, a vast continent which, while entering the era of globalization, is also confronted by a number of issues, including the environment and climate change, demographics, trade issues, internal and external migration, education, economic Issues, governance, and the influence of other countries. Written by former Prime Minister of Niger and current Chief Executive Officer of the Secretariat of the New Partnership for Africa's Development (NEPAD), Dr Ibrahim Assane Mayaki, this book offers an overview of Africa, and looks to the next generation of leaders in the continent, aiming to offer a manifesto for

future change.
Sauvegarder le XXe siècle : la conservation des matériaux modernes : les actes de la conférence Symposium 91 Springer Science & Business Media
 The Arctic is undergoing rapid and dramatic environmental and social transformations due to climate change. This has ramifications for the entire planet, as change spreads through interconnected global networks that are environmental, cultural, economic and political. Today, with the major thrust of research shifting away from deciphering causes and monitoring trends, the central preoccupation of a growing circle of actors has become the exploration of strategies for responding and adapting to climate change. But to understand the far-reaching nature of climate change impacts and the complexities of adaptation, a truly interdisciplinary approach is required. Unique in the UN system, UNESCO brings together the domains of natural sciences, social sciences, culture, education and communication. Given this broad mandate,

UNESCO favors integrated approaches for monitoring and adapting to climate change in the Arctic, fostering dialogue among scientists, circumpolar communities and decision-makers. This book brings together the knowledge, concerns and visions of leading Arctic scientists in the natural and social sciences, prominent Chukchi, Even, Inuit and Saami leaders from across the circumpolar North, and international experts in education, health and ethics. They highlight the urgent need for a sustained interdisciplinary and multi-actor approach to monitoring, managing and responding to climate change in the Arctic, and explore avenues by which this can be achieved.--
 Publisher's description.
Renewable Energy Food & Agriculture Org.
 This Intergovernmental Panel on Climate Change Special Report (IPCC-SRREN) assesses the potential role of renewable energy in the mitigation of climate change. It covers the six most important renewable energy sources - bioenergy, solar, geothermal, hydropower, ocean and wind energy - as well as their integration into present and future

energy systems. It considers the environmental and social consequences associated with the deployment of these technologies and presents strategies to overcome technical as well as non-technical obstacles to their application and diffusion. SRREN brings a broad spectrum of technology-specific experts together with scientists studying energy systems as a whole. Prepared following strict IPCC procedures, it presents an impartial assessment of the current state of knowledge: it is policy relevant but not policy prescriptive. SRREN is an invaluable assessment of the potential role of renewable energy for the mitigation of climate change for policymakers, the private sector and academic researchers.

Agriculture urbaine en Afrique de l'Ouest

The book presents an overview of the International practices and state-of-the-art of LCA studies in the agri-food sector, both in terms

of adopted methodologies and application to particular products; the final purpose is to characterise and put order within the methodological issues connected to some important agri-food products (wine, olive oil, cereals and derived products, meat and fruit) and also defining practical guidelines for the implementation of LCAs in this particular sector. The first chapter entails an overview of the application of LCA to the food sector, the role of the different actors of the food supply chain and the methodological issues at a general level. The other chapters, each with a particular reference to the main foods of the five sectors under study, have a common structure which entails the review of LCA case studies of such agri-food products, the methodological issues, the ways with which they have been faced and the suggestion of practical guidelines.

Carbohydrate-Active Enzymes United Nations

In September 2015 countries agreed to a set of sustainable development goals. Attainment of all of the goals depends directly or indirectly on the

availability of sustainable energy. Member States of the UNECE have asked how the region can attain its sustainable energy objectives. The response is complex given the diversity of the region and the range of forces and trends shaping the future. UNECE has undertaken an exploration of the factors shaping the future energy system and has developed four alternative scenarios of how the future might be. This document presents the first results of that work.
