Access to a new companion Web site allows users to view and search contents of the entire eight-volume set online.

Draft Final Report of the Second Workshop on Shipboard Scientific Diving National Academies Press

The nature of memory for everyday events, and the contexts that can affect it, are controversial topics being investigated by researchers in cognitive, social, clinical, and developmental/lifespan psychology today. This book brings many of these researchers together in an attempt to unpack the contextual and processing variables that play a part in everyday memory, particularly for emotion-laden events. They discuss the mental structures and processes that operate in the formation of memory representations and their later retrieval and interpretation.

Value of Innovation Springer Publishing Company

This book explores previously unexamined overlaps between the poetic imagination and the medical mind. It shows how appreciation of poetry can help us to engage with medicine in more intense ways based on ‘de-familiarising’ old habits and bringing poetic forms of ‘close reading’ to the clinic. Bleakley and Neilson carry out an extensive critical examination of the well-established practices of narrative medicine to show that non-narrative, lyrical poetry does different kind of work, previously unexamined, such as place eclipsing time. They articulate a groundbreaking ‘lyrical medicine’ that promotes aesthetic, ethical and political practices as well as noting the often-concealed metaphor cache of biomedicine. Demonstrating that ambiguity is a key resource in both poetry and medicine, the authors anatomise poetic and medical practices as forms of extended and situated cognition, grounded in close readings of singular contexts. They illustrate structural correspondences between poetic diction and clinical thinking, such as use of sound and metaphor. This provocative examination of the meaningful overlap between poetic and clinical work is an essential read for researchers and practitioners interested in extending the reach of medical and health humanities, narrative medicine, medical education and English literature.

Textbook of Respiratory Medicine Springer Publishing Company

Practical and user-friendly, this text provides the orthopedic and hand surgeon with all the essential information for diagnosing and treating carpal tunnel syndrome (CTS) and other median neuropathies of the hand and wrist, with special emphasis on challenges and complications. Organized to allow for easy searching of specific subject matter, opening chapters discuss anatomy of the median nerve, history and pathophysiology of CTS, clinical presentation and diagnosis, including imaging, and severity scoring. Presentation of various treatment strategies follows, both non-operative and surgical, including open and endoscopic techniques and revision surgery, incomplete release, transection, use of the reverse radial forearm flap, vein wrap, synovial wrap, and microneurolysis. Other median neuropathies are discussed as well, including neuromas and stimulation for chronic median nerve pain. Generously illustrated, *Carpal Tunnel Syndrome and Related Median Neuropathies* is a valuable resource for orthopedic and hand surgeons on the evaluation and treatment of complications and complexities arising from carpal tunnel syndrome and surgery.

This book brings to life best practices of Human Simulation; maximizing the Standardized Patient (SP) methodology that has played a major role in health professions learning and assessment since the 1960s. Each chapter reflects the Association of SP Educators Standards of Best Practices (SOBPs) and provides guidance for implementation. Multiple insights are offered through embedded interviews with international experts to provide examples illustrating successful strategies. The Human Simulation Continuum Model, a practical and theoretical framework, is introduced to guide educators in decision-making processes associated with the full range of human simulation. The Continuum Model spans improvisations, structured role-play,

embedded participants, and simulated-standardized patients. This book also provides the full “how-to” for SP methodology covering topics including; case/scenario development, creating training material, training techniques for case portrayal, training communication and feedback skills, GTA/MUTA/PTA training, SP program administration and professional development for SP Educators. A pragmatic, user-friendly addition to the Comprehensive Healthcare Simulation series, *Implementing Best Practices in Standardized Patient Methodology* is the first book framed by the ASPE SOBPs, embracing best practices in human simulation and marshaling the vast expertise of a myriad of SP Educators.

Comprehensive Healthcare Simulation: Implementing Best Practices in Standardized Patient Methodology Functional Assessment for Adults with Disabilities

Human monitoring as a supplement to or replacement for environmental monitoring of toxic substances in the workplace has become an increasingly important issue within the last decade, leading to Congressional hearings, governmental studies, and scientific conferences around the world. Just as the purposes for undertaking human monitoring are diverse and sometimes conflicting, so too are the concerns-- medical, legal, and ethical-- such testing has generated. The authors begin by providing precise characterizations of the types of monitoring now in use and a clear account of the legal basis for OSHA monitoring requirements. They then turn to scientific and technical concerns that have evolved around monitoring, including the frequency and timing of examinations, human variability, and the distinctions that exist between high-risk and sensitive groups. Specific legal and ethical problems of conducting monitoring tests on workers are then covered in full, including the consequences for the worker of medical removal from the workplace, the conflict between human monitoring and personal privacy, access to medical records, and the use and possible misuse of test results. The volume concludes with policy recommendations for the use of human monitoring, recommendations for the use of human monitoring, recommendations that would achieve the goal of reducing occupational disease and injury while remaining within the bounds of a supportable ethical framework. Role Development for the Nurse Practitioner, Third Edition is an integral text that guides students in their transition from the role of registered nurse to nurse practitioner.

Sex, Paranoia, and Modern Masculinity explores how twentieth-century conceptions of paranoia became associated with the excessive or unregulated exercise of masculine intellectual tendencies. Through an extended analysis of Freudian metapsychology, Kenneth Paradis illustrates how paranoid ideation has been especially connected to the figure of the male body under threat of genital mutilation or emasculation. In this context, he also considers how both midcentury detective fiction (especially the work of Raymond Chandler) and contemporaneous autobiographies of male-to-female transsexuals negotiate the terms of this gendered understanding of psychopathology, thus articulating their own notions of moral value, individual autonomy, and effective agency.
