Research Handbook on Climate Change and Trade Law Springer Science & Business Media

This timely book brings clarity to the debate on the new legal phenomenon of environmental border tax adjustments. It will help form a better understanding of the role and limits these taxes have on environmental policies in combating global environmental challenges, such as climate change.

Environmental Border Tax Adjustments and International Trade Law Routledge

The connections between trade and security are hardly new. Analysts and practitioners have clearly recognized this interrelationship since the mercantilist arguments of the 16th and 17th centuries. Despite wishful economic liberal thinking that might prefer to separate the political from the economic, it is widely recognized that trade and security are fundamentally interconnected in the foreign policy of states. Over time, as new forms of trade policy have come into being and the international security environment has evolved, the nexus of these two spheres has grown more complex and scholars have struggled to understand their interconnection. This edited volume addresses linkages between trade and security by examining the influence of security factors in driving trade policy measures and the corresponding implications of different types of trade arrangements for international security. Ultimately, the project shows that several elements—traditional economic factors, traditional security factors, and human security factors—can affect the development of trade agreements and unilateral policies, and that trade policies may have both a direct and an indirect effect on traditional and human security. The project focuses on Asia, a region where economics is increasingly important but many security issues still linger unresolved, as a primary setting to test trade linkage theories. It also provides a comparative perspective through examination of how the EU and US have used their trade policies to achieve non-economic goals and how these policies have influenced their security environment. Case studies in this project cover key trade institutions and agreements including the World Trade Organization, the Association of Southeast Asian Nations, ASEAN Plus Three, the East Asia Summit, the Asia-Pacific Economic Cooperation forum, the Shanghai Cooperation Organization, and bilateral preferential trade agreements.

**Climate Change 2022 - Mitigation of Climate Change** OECD Publishing

This is the third volume of papers in the topical area of environmental management. Arising from work done by the International Centre for the Environment at the University of Bath, the papers address inter-disciplinary environmental themes particularly from a business and management perspective.

**International Climate Change Law** Routledge

This work offers a synthesis of the current approaches toward an integration of international trade and climate change, with a view to fostering potential improvements in policies and institutions affecting these. A number of pragmatic measures are proposed with reference to the WTO and the

United Nations Framework Convention on Climate Change (UNFCCC) regimes, which are expected to contribute toward enhanced climate change governance, as well as promoting international trade.

**Trade and Environment** Edward Elgar Publishing

The open access publication of this book has been published with the support of the Swiss National Science Foundation. In WTO Law and Trade Policy Reform for Low-Carbon Technology Diffusion, Zaker Ahmad puts a spotlight on the crucial importance of dismantling market barriers and offering incentives to improve clean technology access and diffusion across borders. To that end, the author argues for a synergistic co-development of the international trade and climate legal regimes. Two case studies – one on carbon pricing, another on official export credit support – place the theoretical arguments in a practical trade policy setting. The emerging doctrine and principle of Common Concern of Humankind serves as the key theoretical and structural foundation of the work. A useful read for anyone interested in an effective role of trade law and policy to facilitate climate action.

*Reconciling Trade and the Environment* Springer Science & Business Media

Carbon-Related Border Adjustment and WTO Law will be of great benefit to policymakers and practitioners working in the area of climate policy and trade regulation. Researchers and advanced students in international economic law and international enviro

The WTO Dispute Settlement System Edward Elgar Publishing

This textbook, by three experts in the field, provides a comprehensive overview of international climate change law. Climate change is one of the fundamental challenges facing the world today, and is the cause of significant international concern. In response, states have created an international climate regime. The treaties that comprise the regime - the 1992 United Nations Framework Convention on Climate Change, the 1997 Kyoto Protocol and the 2015 Paris Agreement establish a system of governance to address climate change and its impacts. This book provides a clear analytical guide to the climate regime, as well as other relevant international legal rules. The book begins by locating international climate change law within the broader context of international law and international environmental law. It considers the evolution of the international climate change regime, and the process of law-making that has led to it. It examines the key provisions of the Framework Convention, the Kyoto Protocol and the Paris Agreement. It analyses the principles and obligations that underpin the climate regime, as well as the elaborate institutional and governance architecture that has been created at successive international conferences to develop commitments and promote transparency and compliance. The final two chapters address the polycentric nature of international climate change law, as well as the intersections of international climate change law with other areas of international regulation. This book is an essential introduction to international climate change law for students, scholars and negotiators.

*The Law and Economics of a Sustainable Energy Trade Agreement* Cambridge University Press

This book provides a comprehensive examination of the legal and policy interactions between international trade and measures to forestall climate change. Epps and Green cover all major aspects of the current debate and are especially attentive to the connection to economic

development and poverty alleviation. The last chapter provides a creative and thoughtful menu of policy initiatives that could be undertaken in the World Trade Organization or in the UN Climate Change regime.

**Export Restrictions and Export Controls** BRILL

This book addresses the case for a Sustainable Energy Trade Agreement (SETA) and the move from fossil fuels to renewable energy.

*Handbook of the International Political Economy of Energy and Natural Resources* Springer Science & Business Media

This impartial study analyses the role of employer's organisations and trade unions in climate change policy and its impacts on the labour market. The policies of government to manage greenhouse gas emissions will require business to change its product and service delivery arrangements, which in turn means labour requirements will also change. The book also considers whether labour market issues should be explicit in the theoretical framework of ecological modernisation as it guides the policy development process.

*Greening the Americas* Edward Elgar Publishing

Tensions between economic interests and environmental protection have assumed crisis proportions in awareness at every level of society. In particular, the World Trade Organization has become entangled in controversies related to legitimacy, democracy, environmental protection, and fragmentation of international law, fuelling a contentious debate on the use (or abuse) of environmental norms at the WTO. To a greater degree than any comparable treatment, this book focuses on the role of the WTO dispute settlement system in addressing trade-environment conflicts. Highlighting the ways in which environmental issues challenge the legitimacy of WTO jurisprudence, it considers such relevant core issues as the following: challenges posed to the WTO by so-called "linkage" issues, such as environmental protection, labour, and investment; to what extent the WTO can apply rules of international law (e.g., environmental ones) that are not contained in the WTO agreements; and concerns over the Dispute Settlement System's lack of democratic accountability in matters of great public interest. The study analyses in detail the role of international environmental law in three key WTO cases, namely the Shrimp-Turtle, Hormones and Biotech disputes. This deeply informed and thoughtful book is of special importance for its proposals on how the WTO dispute settlement system can improve its legitimacy while respecting the limits of its mandate. It will be welcomed by international trade attorneys, environmental lawyers, concerned academics and students, and government officials in both trade and environmental policy.

*Research Handbook on Environment, Health and the WTO* Springer Science & Business Media

As the demand for environmental quality is increasing and as the current GATT rules monitored by the WTO are not very suitable for environmental protection, either a new international environmental organization may be formed soon or new environmental regulations may be added to GATT. In either case, understanding of the interactions between trade and the environment will be vital. *Trade and the Environment* presents both the theoretical and empirical exposition of (i) the impact of trade liberalization on environmental quality; (ii) the impact of environmental regulations on international competitiveness; and (iii) strategic trade and environmental policies. An important feature of *Trade and the Environment* as compared to earlier books is that it brings together the

reciprocal interactions between trade and the environment. It can be used as the main or complementary textbook for a course on trade and the environment.

**Linking Trade and Security** Oxford University Press

*International Environmental Cooperation and the Global Sustainability Capital Framework* offers an integrated analysis of international environmental cooperation (IEC) and global sustainability. From a strategic management perspective, the book develops the Sustainability Capital Framework for IEC and global sustainability. The book provides an in-depth examination of the significance of state participation in international environmental agreements (IEAs), and analyzes the structure, life cycle, and evolution of IEAs. Through the Sustainability Capital Framework, the book delineates the core drivers, barriers, incentives, and critical success factors for IEC and global sustainability. - Develops the Sustainability Capital Framework for IEC and global sustainability from a strategic management perspective - Discusses the imperative for IEC through the novel lens of our common vulnerabilities and contingent survivability in the face of global environmental change - Presents a detailed discussion of the structure, life cycle, and evolution of IEAs - Identifies the core drivers, barriers, incentives, and critical success factors for IEC and global sustainability - Analyzes the human and environmental impacts of war, a core barrier to IEC and global sustainability - Highlights the human and moral dimensions of global sustainability

*The Regulation of International Trade* Edward Elgar Publishing

This book was initiated while the three major authors were at the Development Centre of Organisation for Economic Cooperation and Development (OECD) in Paris, working on its program on economic growth, trade, and sustainability. We wish to thank the OECD Development Centre for its support. The book was completed during summer 2001 at the Center for Agricultural and Rural Development (CARD) at Iowa State University. We appreciate the resources and financial support CARD provided for publication of this work. Sandra Clarke provided technical editing of the manuscripts and oversaw the indexing of the book; Becky Olson prepared the camera-ready copy of the final manuscript. We thank them for their instrumental help in these last steps. Part of the work presented in this volume previously appeared in some form in journals. The analysis of Chile presented in Chapter 6 appeared as "Growth, Trade, Pollution and Natural-Resource Use in Chile. Evidence from an Economywide Model," *Agricultural Economics* 19(1998): 87-97; and as "Trade Integration, Environmental Degradation, and Public Health in Chile: Assessing the Linkages," *Environment and Development Economics*, in press. The work on Costa Rica and Indonesia summarised in Chapter 10 appeared as "Is There a Trade-off Between Trade Liberalisation and Pollution Abatement in Costa Rica? A Computable General Equilibrium Assessment," *Journal of Policy Modeling* 20(1): 11-31; and as "The Environment and Welfare Implications of Trade and Tax Policy," *Journal of Development Economics* 52(1997): 65-82.

*The Fragmentation of Global Climate Governance* Edward Elgar Publishing

This conference proceedings examines how to assess the environmental effects of trade liberalisation agreements.

*Trade and Environmental Law* Springer

Comprised of papers from leading experts, this multifaceted analysis explores the environmental requirements that have emerged from the trade negotiations of the World Trade Organization and

their impact on developing markets such as South Asia. These essays address a variety of environmental and health-related standards and their prohibitive effect, discriminatory impact, and high-compliance costs--all of which hurt these developing markets. The volume concludes with an agenda of action points for governments, businesses, and international agencies to address the challenges these standards present.

[OECD Trade Policy Studies Environmental Requirements and Market Access](#) Cambridge University Press

International energy law is an elusive but important concept. There is no body of law called 'international energy law', nor is there any universally accepted definition for it, yet many specialised areas of international law have a direct relationship

**International Trade Policies and Climate Change Governance** OECD Publishing

The interaction between climate change and trade has grown in prominence in recent years. This Research Handbook contains authoritative original contributions from leading experts working at the interface between trade and climate change. It maps the state of affairs in such diverse areas as: carbon credits and taxes, sustainable standard-setting and trade in 'green' goods and services or investment, from both a regional and global perspective. Panagiotis Delimatsis redefines the interrelationship of trade and climate change for future scholarship in this area.

[WTO Law and Trade Policy Reform for Low-Carbon Technology Diffusion](#) MIT Press

The book examines trade agreements in the context of the current world economic crisis and the uncompleted World Trade Organization (WTO) Doha Round of trade negotiations. With economies shrinking and protectionism on the rise, many fear a protracted global recession. This raises important questions as to what role trade agreements – multilateral, plurilateral, and bilateral – should be playing in the current climate of uncertainty, and how best to plan for a more stable economic future. Previous assumptions are now being questioned, making this an opportune time to critically examine the WTO, free trade agreements, bilateral investment treaties, and other international economic law instruments. Furthermore, participants in international agreements are concerned with emerging issues that have the potential to strengthen or weaken the global trading system, including matters of treaty interpretation; terms of new agreements; and effects of existing provisions. This book provides a timely addition to the international economic law literature, as its submissions have been prepared during a time of unusual uncertainty and economic change; individuals interested in international economic law will seek scholarship that recognizes the current international economic climate. This book should be of interest to a wide range of academics and student researchers, as well as policymakers and practitioners.

**Regional Integration in the Asia Pacific Issues and Prospects** Kluwer Law International B.V. Investigating over twenty cases, this OECD report examines how environmental requirements can become trade barriers for developing countries.
