Literary Analysis: The Basics is an

insightful introduction to analysing a wide range of literary forms. Providing a clear outline of the methodologies employed in twenty-first century literary analysis, it introduces readers to the genres, canons, terms, issues, critical approaches, and contexts that affect the analysis of any text. It addresses such questions as: What counts as literature? Is analysis a dissection? How do gender, race, class and culture affect the meaning of a text? Why is the social and historical context of a text important? Can digital media be analysed in the same way as a poem? With examples from ancient myths to young adult fiction, a glossary of key terms, and suggestions for further reading, *Literary Analysis: The Basics* is essential reading for anyone wishing to improve their analytical reading skills.

Literary Analysis: The Basics Palgrave Macmillan

Attributed to the thirteenth-century Zen Master Keizan (1268-1325), the Denkoroku tells of the enlightenment of the fifty-three masters, beginning with Shakyamuni Buddha and concluding with the twelfth-century Zen Master Ejyo, who was Dogen's dharma heir. Keizan explores how the personal koan (spiritual question) of the various disciples was resolved so that they fully realized their inherent enlightenment. By use of his kaleidoscopic view of Buddhist teachings, Keizan reveals the myriad ways in which the Unborn has been experienced and how these experiences relate to one's daily practice. The translator, Rev. Hubert Nearman, is a senior disciple of the late Rev. Master Jiyu-Kennett, first Abbess of Shasta Abbey in California, and founder of the Order of Buddhist Contemplatives. Prior to becoming a monk, he was a scholar and translator of medieval Japanese texts and was a recipient of a grant for his translation work from the National Endowment for the Humanities.

One of those rare books that is immediately enjoyable yet will repay many re-readings' Poetry Review Carol Ann Duffy's highly praised second collection, for which she was given the Somerset Maughan Award, showcases the Poet Laureate's skill even at the very start of her career. Within are poems that reveal the full range of her interests: from the dramatic monologues, to meditations on death and art, to poems of protest and poems of love. Throughout it all, though, is a resounding determination to give voices to those who are usually voiceless, and always apparent is her inimitable wit, wisdom and imagination. At once tender and sharp, moving and humourous, *Selling Manhattan* has dazzled both readers and critics ever since it was first published in 1987.

Precalculus is adaptable and designed to fit the needs of a variety of precalculus courses. It is a comprehensive text that covers more ground than a typical one- or two-semester college-level precalculus course. The content is organized by clearly-defined learning objectives, and includes worked examples that demonstrate problem-solving approaches in an accessible way. Coverage and Scope Precalculus contains twelve chapters, roughly divided into three groups. Chapters 1-4 discuss various types of functions, providing a foundation for the remainder of the course. Chapter 1: Functions Chapter 2: Linear Functions Chapter 3: Polynomial and Rational Functions Chapter 4: Exponential and Logarithmic Functions Chapters 5-8 focus on Trigonometry. In Precalculus, we approach trigonometry by first introducing angles and the unit circle, as opposed to the right triangle approach more commonly used in College Algebra and Trigonometry courses. Chapter 5: Trigonometric Functions Chapter 6: Periodic Functions Chapter 7: Trigonometric Identities and Equations Chapter 8: Further Applications of Trigonometry Chapters 9-12 present some advanced Precalculus topics that build on topics introduced in chapters 1-8. Most Precalculus syllabi include some of the topics in these chapters, but few include all. Instructors can select material as needed from this group of chapters, since they are not cumulative. Chapter 9: Systems of Equations and Inequalities Chapter 10: Analytic Geometry Chapter 11: Sequences, Probability and Counting Theory Chapter 12: Introduction to Calculus
