Relationships Among the Brain, the Digestive System, and Eating Behavior Taylor & Francis
Bailliere's Midwives Dictionary has long been the first choice of midwifery students and practitioners seeking a thorough and reliable first point of information in their professional field. Now revised and updated throughout, it provides support and clear, brief information on all key terms. Updates include new terms and revised appendices.

Within the growing world of social media and computer technology, it is important to facilitate collaborative knowledge building through the utilization of visual literacy, decision-making, abstract thinking, and creativity in the application of scientific teaching. *Visual Approaches to Cognitive Education With Technology Integration* is a critical scholarly resource that presents discussions on cognitive

education pertaining to particular scientific fields, music, digital art, programming, computer graphics, and new media. Highlighting relevant topics such as educational visualization, art and technology integration, online learning, and multimedia technology, this book is geared towards educators, students, and researchers seeking current research on the integration of new visual education methods and technologies.

Do atheists hate God?

Many Christians seem to think so. For the last three centuries Christians have widely assumed that atheism is always a result of a rebellious, sinful rejection of God.

According to this view, at some level atheists really do know there is a God, but they sinfully suppress this knowledge because they want to live independently of God. But what if that is not correct? What if some folks are atheists not because they're sinful and foolish but because they've thought hard, they've looked carefully, and they have simply not found God? What if the common Christian assumptions about atheism are little

more than an indefensible prejudice? What if the atheist really is our neighbor?

This collection takes an interdisciplinary look at how the transformation towards plant-based diets is becoming more culturally acceptable, economically accessible, technically available and politically viable. We offer strategies for achieving sustainable food systems without having to forgo succulence, sensuality and sacredness of food. Shifting food systems is one of humanity's biggest challenges and greatest opportunities. This book explores adaptable and health-promoting plant-based diets, which by their nature can support nourishing environmental, social, ethical, political, and economic outcomes. In this book, detailed descriptions are provided of what constitutes a healthy plant-based diet and active lifestyle. Readers are invited to engage with a community of practitioners delving more deeply into strategies for transitioning societies to greater succulence and sustainability. Throughout the first section of the

book, environmental challenges and opportunities for reversing climate change are highlighted as our most urgent action. The focus then turns to global food systems and the intersections that are undermining human and animal health. The final section offers preventative approaches and encourages reorienting systems of law, economics and education to exemplify integrity, coordination, coherence and compassion. This book will be of interest to students and academics, as well as policy professionals in all fields engaging with complex issues and systems analyses. It will be of value to those working in health services, policy development, agriculture, economic development, and social change as it provides steps to enhance well-being, pathways to increase jobs in the green economy, and practical ideas to reverse greenhouse gas emissions. It may also be a superb guide for individuals and families looking to become vibrant eaters and leaders.

Using the authors many

years of experience in emergency services and his skills as a hazardous materials consultant, prepares the first responder to handle everything from re-establishing control and on-scene triage to investigating the crime. Including information on pre-incident and avoidance tactics, the author also discusses monitoring and detection techniques, protective equipment and decontamination, and an extensive list of resource organizations and training opportunities. This up-to-date 3rd edition is written to provide concise information for emergency responders who might be called upon to confront explosive, chemical, nuclear, biological, or incendiary acts of terrorism.

Learning, Design, and Technology Routledge
People with Animals emphasizes the interdependence of people and animals in society, and contributors examine the variety of forms and time-depth that these relations can take. The types of relationship studied include the importance of manure to farming societies, dogs as livestock guardians, seasonality in pastoralist

societies, butchery, symbolism and food. Examples are drawn from the Pleistocene to the present day and from the Altai Mountains, Ethiopia, Iraq, Italy, Mongolia and North America. The 11 papers work from the basis that animals are an integral part of society and that past society is the object of most archaeological inquiry. Discussion papers explore this topic and use the case-studies presented in other contributions to suggest the importance of ethnozoarchaeology not just to archaeology but also to anthrozoology. A further contribution to archaeological theory is made by an argument for the validity of ethnozoarchaeology derived models to Neanderthals. The book makes a compelling case for the importance of human-animal relations in the archaeological record and demonstrates why the information contained in this record is of significance to specialists in other disciplines.

This book brings together papers presented at the Tenth International School on Lexicography, titled

“Life Beyond Dictionaries” and held in Ivanovo, Russia, and Florence, Italy, in September 2013. It continues the series of edited volumes dealing with the theoretical and practical aspects of lexicography, published by Cambridge Scholars Publishing in 2007, 2009, 2010, and 2013. The book is divided into three sections, “Lexicography Worldwide: Historical and Modern Perspectives”, “Tourism and Heritage Dictionaries with Special Reference to Culture”, and “Projects of New Dictionaries”. The contributions to this volume investigate problems of world lexicography and its cultural contexts with special reference to projects of new dictionaries. As such, the book will be of interest to theoreticians, lexicographers, and students of linguistic faculties.

Plant-Based Diets for Succulence and Sustainability

CRC Press
In 1858, Drs. Henry Gray and Henry Vandyke Carter created a book for their surgical colleagues that established an enduring standard among anatomical texts. After more than 150 years of continuous publication,

Gray's Anatomy remains the definitive, comprehensive reference on the subject, offering ready access to the information you need to ensure safe, effective practice. This 41st edition has been meticulously revised and updated throughout, reflecting the very latest understanding of clinical anatomy from field leaders around the world. The book's traditional lavish art programme and clear text have been further honed and enhanced, while major advances in imaging techniques and the new insights they bring are fully captured in new state-of-the-art X-ray, CT, MR, and ultrasonic images. - Presents the most detailed and dependable coverage of anatomy available anywhere. - Regional organization collects all relevant material on each body area together in one place, making access to core information easier for clinical readers. - Anatomical information is matched with key clinical information where relevant. - Numerous clinical discussions emphasize considerations that may affect medical care. - Each chapter has been edited by experts in their field, ensuring

access to the very latest evidence-based information on that topic. - More than 1,000 completely new photographs, including an extensive electronic collection of the latest X-ray, CT, MR, and histological images. - The downloadable Expert Consult eBook version included with your purchase allows you to search all of the text, figures, references and videos from the book on a variety of devices. - Carefully selected electronic enhancements include additional text, tables, illustrations, labelled imaging and videos – as well as 24 specially invited 'Commentaries' on new and emerging topics related to anatomy. This edited collection brings together a series of interdisciplinary contributions in the field of Information Technology Law. The topics addressed in this book cover a wide range of theoretical and practical legal issues that have been created by cutting-edge Internet technologies, primarily Big Data, the Internet of Things, and Cloud computing. Consideration

is also given to more recent technological breakthroughs that are now used to assist, and — at times — substitute for, human work, such as automation, robots, sensors, and algorithms. The chapters presented in this edition address these issues from the perspective of different legal backgrounds. The first part of the book discusses some of the shortcomings that have prompted legislators to carry out reforms with regard to privacy, data protection, and data security. Notably, some of the complexities and salient points with regard to the new European General Data Protection Regulation (EU GDPR) and the new amendments to the Japan's Personal Information Protection Act (PIPA) have been scrutinized. The second part looks at the vital role of Internet intermediaries (or brokers) for the proper functioning of the globalized electronic market and innovation technologies in general. The third part examines an electronic approach to evidence with an evaluation of how these technologies affect civil and criminal investigations. The authors also explore

issues that have emerged in e-commerce, such as Bitcoin and its blockchain network effects. The book aims to explain, systemize and solve some of the lingering legal questions created by the disruptive technological change that characterizes the early twenty-first century.

Fashion designers are presented with a range of methods and concepts for pattern cutting are presented, the main body of these methods, both traditional and contemporary, is predominately based on a theoretical approximation of the body that is derived from horizontal and vertical measurements of the body in an upright position: the tailoring matrix. As a consequence, there is a lack of interactive and dynamic qualities in methods connected to this paradigm of garment construction, from both expressional and functional perspectives. This work proposes and explores an alternative paradigm for pattern cutting that includes a new theoretical approximation of the body

as well as a more kinetic method for garment construction that, unlike the prevalent theory and its related methods, takes as its point of origin the interaction between the anisotropic fabric and the biomechanical structure of the body. As such, the research conducted here is basic research, aiming to identify fundamental principles for garment construction. Based on some key principles found in the works of Geneviève Sevin-Doering and in pre-tailoring methods for constructing garments, the proposed theory for – and method of – garment construction was developed through concrete experiments by cutting and draping fabrics on live models. Instead of a static matrix of a non-moving body, the result is a kinetic construction theory of the body that is comprised of balance directions and key biomechanical points, along with an alternative draping method for dressmaking. This methodology challenges the fundamental relationship between dress, garment construction, and the body, working from the body outward, as opposed to the methods that are based on the prevalent

paradigm of the tailoring matrix, which work from the outside toward the body. This alternative theory for understanding the body and the proposed method of working allows for diverse expressions and enhanced functional possibilities in dress.

Bailliere Tindall

In this second edition of a bestseller, authors Paul H. Brunner and Helmut Rechberger guide

professional newcomers as well as experienced engineers and scientists towards mastering the art of material flow analysis (MFA) from the very beginning to an advanced state of material balances of complex systems.

Handbook of Material Flow Analysis: For Environmental, Resource, and Waste Engineers, Second Edition serves as a concise and reproducible methodology as well as a basis for analysis, assessment and improvement of anthropogenic systems through an approach that is helpfully uniform and standardized. The methodology featured in this book is a vital resource for generating new data, fostering understanding, and increasing knowledge to benefit the growing MFA community working in the fields of industrial ecology, resource management, waste management, and environmental protection. This new second edition takes into account all new developments and readers will profit from a new exploration of STAN software, newly added citations, and thoroughly described case studies that reveal the potential of MFA to solve industrial

ecology challenges.

Lipids and Skin Health is the first effort to summarize and review the studies, ideas, and research that link lipid metabolism to the largest organ of our body, the skin. The book covers the fundamental biology of the skin, and the major involvement of the transcriptional factors that govern lipid synthesis and the bioactive lipids in this intriguing organ. All layers of skin are presented, as well as their relevant lipids from the epidermis to dermis and even to the hypodermis. The important and unique-to-skin biological pathways are laid out, with a special focus on the various models that demonstrate the essential role of lipid synthesis in skin pathophysiology. The use of lipids in the cosmetic industry is emphasized, and last but not least the involvement of lipids in the clinical setting is also discussed. This book will appeal to healthcare professionals, researchers and dermatology

professionals, and will help them to brainstorm new products and opportunities that will target the emerging importance of lipid metabolism in skin for acne, aging, and healthy skin. Apostolos Pappas, Ph.D., is a professional member of the Institute of Food Technology. He started his professional career as a research biochemist in the Skin Research Center of Johnson & Johnson and later served as a group leader at Munich Biotech, where he worked on cancer research. Thereafter he returned to Johnson & Johnson, where he is currently a Research Manager and Fellow focusing on lipid metabolism research. He has authored numerous scientific publications, patent applications, and books.

Fueled by an increasingly interconnected world, the desire for engaging experiences plays a more important role in interiors than ever before. There is a tendency in the design of products, furniture, and environments toward enhanced interaction that employs psychosocial principles. This publication presents both

high and low-tech applications ranging from a light fixture to art installations and fully realized buildings. The book illustrates human-centered design strategies through a series of six chapters, each including examples that introduce one of following approaches: communicating, stimulating, synomorphic, transactional, transformative, and challenging.

The multiple, related fields encompassed by this Major Reference Work represent a convergence of issues and topics germane to the rapidly changing segments of knowledge and practice in educational communications and technology at all levels and around the globe. There is no other comparable work that is designed not only to gather vital, current, and evolving information and understandings in these knowledge segments but also to be updated on a continuing basis in order to keep pace with the rapid changes taking place in the relevant fields. The Handbook is composed of substantive

(5,000 to 15,000 words), peer-reviewed entries that examine and explicate seminal facets of learning theory, research, and practice. It provides a broad range of relevant topics, including significant developments as well as innovative uses of technology that promote learning, performance, and instruction. This work is aimed at researchers, designers, developers, instructors, and other professional practitioners.

Springer Food Science and the Culinary Arts is a unique reference that incorporates the principles of food and beverage science with

practical applications in food preparation and product development. The first part of the book covers the various elements of the chemical processes that occur in the development of food products. It includes exploration of sensory elements, chemistry, and the transfer of energy and heat within the kitchen. The second part looks in detail at the makeup of specific foodstuffs from a scientific perspective, with chapters on meat, fish, vegetables, sugars, chocolate, coffee, and wine and spirits, among others. It provides a complete overview of the food science relevant to culinary students and professionals training to work in the food industry.

- Provides foundational food science information

to culinary students and specialists - Integrates principles of food science into practical applications - Spans food chemistry to ingredients, whole foods, and baked and mixed foods - Includes a comprehensive glossary of terms in food science
