In Deutschland erteilen jedes Jahr ca. 30.000 öffentliche Auftraggeber mehr als eine Million Aufträge über Bau-, Dienst- und Lieferleistungen in einer Gesamthöhe von rund 250 Milliarden Euro. Die Autoren führen in die Grundlagen und die Praxis des Vergaberechts von der Bekanntmachung über die Angebotsphase bis hin zur Zuschlagserteilung sowie den möglichen Rechtsschutz ein. Mit vielen Beispielen aus der Praxis zeigen sie auf, welche Spielregeln Unternehmen beachten müssen, wenn sie sich erfolgreich um öffentliche Aufträge bewerben wollen. Die zweite Auflage berücksichtigt alle aktuellen Änderungen des Vergaberechts einschließlich der neu gefassten Abschnitte 2 und 3 der Vergabe- und Vertragsordnung für Bauleistungen (VOB/A). "Obwohl es in dem Werk von Paragrafen nur so wimmelt, ist es verständlich geschrieben und bietet viele nützliche Informationen für die Unternehmenspraxis. Ein echter Leitfaden für ein erfolgreiches Tortenschneiden." Markt und Mittelstand
Media and Convergence Management OUP Oxford
Today security, quality and the availability of food are very important. The complex relations of the above mentioned issues evolve in different fields of law. This book edited by Ines Härtel and Roman Budzinowski covers a wide range of topics via analysis and discussion in the European context, such as the right to food, Common Agricultural Policy, contractual relations and value chains in the agri-food sector, organic farming, food production safety issues, questions of food labelling, Health Claims, Novel Food, Patents, the role of institutions such as EFSA, the responsibility of trade and CSR. Legal frameworks, essential concerns and future developments of food security, food safety and food quality are the basis for discussion and solution finding.

Angebotsprüfung bis hin zur Zuschlagserteilung ein.
The Professional Salvor's Liability in the Law of Negligence and the Doctrine of Affirmative Damages Cambridge University Press
This Volume of the AIDA Europe Research Series on Insurance Law and Regulation focuses on transparency as the guiding principle of modern insurance law. It consists of chapters written by leaders in the respective field, who address transparency in a range of civil and common law jurisdictions, along with overview chapters. Each chapter reviews the transparency principles applicable in the jurisdiction discussed. Whether expressly or impliedly, all jurisdictions recognize a duty on the part of the insured to make a fair presentation of the risk when submitting a proposal for cover to the insurers, although there is little consensus on the scope of that duty. Disputed matters in this regard include: whether it is satisfied by honest answers to express questions, or whether there is a spontaneous duty of disclosure; whether facts relating to the insured's character, as opposed to the nature of the risk itself, are to be presented to the insurers; the role of insurance intermediaries in the placement process; and the remedy for breach of duty. Transparency is, however, a much wider concept. Potential policyholders are in principle entitled to be made aware of the key terms of coverage and to be warned of hidden traps (such as conditions precedent, average clauses and excess provisions), but there are a range of different approaches. Some jurisdictions have adopted a "soft law" approach, using codes of practice for pre-contract disclosure, while other jurisdictions employ the rather nebulous duty of (utmost) good faith. Leaving aside placement, transparency is also demanded after the policy has been incepted. The insured is required to be transparent during the claims process. There is less consistency in national legislation regarding the implementation of transparency by insurers in the context of handling claims.
German books in print Springer-Verlag
Innovation is critical for the survival of any enterprise. But most company leaders are still dissatisfied with the innovation management of their companies. Why is it so? In order to launch successful innovations like a high-performance machine on a sustainable basis, most companies have to transform themselves.

What they need is an innovation management system whose components are consistent and, preferably, self-reinforcing. Vision, objectives, strategy, culture, process, structure & systems and competencies must be aligned. This book demonstrates how the world's best innovators such as Apple, Google, Microsoft, IBM, Toyota, Amazon, GE, Procter & Gamble, Samsung, BMW, 3M etc., which the author calls innovation machines, succeed at this. By means of various case studies and based on his own practical experience, the author describes how the use of the innovation management system will make your company successful, and he lays out the change management to transform your firm into an innovation machine. In doing this, he uses storytelling and the vivid language of a practitioner. The conclusions and main indicated actions at the end of each chapter plus worksheets and checklists support the practitioner in the implementation. Praise for "Die Innovationsmaschine" (German edition): "Rolf-Christian Wentz is exceptionally successful at describing his insights concerning the topic of innovation management ... and at deriving from them practical indicated actions." (translated from German)
GPRA -Society of Public Relations Agencies
Commercial Contracts in Germany SIAM
Currently the notion of "sustainability" is used in an inflationary manner. Therefore the authors start with a definition which is stable to serve as an anchor for further research as well as for discussions among scientists, managers and politicians, ideally across different disciplines. The character of this book is purely conceptual. The argumentation is based on comparison of new and demanding requisites with existing models (process and network architectures in the field of logistics). Formerly neglected impacts on the environment will be included. Main features of a new approach will be developed which are capable to avoid these impacts and to align logistics with the requirements of sustainability. In order to make logistics sustainable large parts will have to be reinvented. The focus needs to be on decoupling transportation activities from economic growth rates.
EU Environmental Law MIT Press
General Data Protection Regulation: First Aid What do organisations that hold or process personal data need to know? From 25th May, 2018, the European Union's General Data

Protection Regulation, GDPR for short, applies. It creates a completely new basis for all data protection in the European Union. The fines for breaches have been drastically increased. In addition to large enterprises and other types of large scale organisation, small companies or free-lancers, small associations, clubs, societies and non-profit making organisations in many shapes and forms are entrusted with a lot of personal data - be it customer or client data, member data, employee data, or supplier data. Clubs and associations often have documentation that allows deep insights into the personal situation of their members. All organisations which hold or process this type of data are defined as "controllers" under the GDPR. It is therefore essential for the respective "controllers" to know the requirements of the GDPR. This publication informs you concisely and clearly regarding the content and the mandatory requirements relating to data processing in the GDPR. In particular it answers the following questions: - Which data is covered by data protection? - Is it necessary to nominate a Data Protection Officer? - Which obligations to provide information must be fulfilled proactively? - What information needs to be included in the records of data processing activities? - When is it permissible to forward data to other persons or organisations? - Which special requirements are there for photographs on your own website? Templates and check lists help you prepare and implement the legal requirements of the General Data Protection Regulation. Numerous examples demonstrate legal pitfalls and how to avoid them. This publication is aimed at owners of small companies, those responsible for data protection within small companies, chairpersons and members of clubs or associations and many other types of non-profit making organisation, as well as anyone else who wishes to gain a quick overview of the requirements of the data protection legislation. About the authors This publication was created by data protection experts. Dr. Eugen Ehmann is Vice-President of Central Franconia (Bavaria) and co-author of Ehmann/Selmayr, Kommentar zur DSGVO (Commentary on the GDPR). Thomas Kranig is President of the Data Protection Authority of Bavaria for the Private Sector. Principles of Federal Prosecution Springer Science & Business Media

A guide to the Semantic Web, which will transform the Web into a structured network of resources organized by meaning and relationships.

Nachhaltigkeit in der öffentlichen Beschaffung Pitman Publishing "Malik demonstrates that management and management theory have strong foundations in systems science, and most specifically in a certain type of cybernetics of truly complex systems, of organismic, self-organizing, and evolving systems. This book provides the basics on how to create robust, functional, and sustainably viable systems. One of the reasons why it has become a classic on management cybernetics, now in its 11th edition, is that the strategies and heuristic principles of complexity management are still relevant - now more than ever."--Back cover.

Numerical Solution of Algebraic Riccati Equations Springer-Verlag An overview of, and commentary on, negotiating acquisitions in Germany. Tax planning, labour law implications, East German law and intellectual property are all covered

Environmental Protection by Means of International Liability Law Createspace Independent Publishing Platform

Das vorliegende Buch analysiert den öffentlichen Beschaffungsprozess und untersucht, weshalb die öffentlichen Einkäufer auf Nachhaltigkeitskriterien oftmals keine Rücksicht nehmen. Florian Hepperle erforscht, welche Hemmnisse einem Mehr an Nachhaltigkeit in der öffentlichen Beschaffung im Wege stehen. Im Gegensatz zu anderen Arbeiten rückt der Autor mögliche fördernde prozessuale Aspekte, die einen positiven Einfluss auf eine nachhaltigere Beschaffung haben können, in den Fokus seiner Untersuchung. Mit Hilfe der Strukturgleichungsmodellierung werden die aufgeworfenen Hypothesen empirisch getestet.

Transparency in Insurance Contract Law C.H.Beck Intersecting two large research areas - numerical analysis and applied probability/queueing theory - this book is a self-contained introduction to the numerical solution of structured Markov chains, which have a wide applicability in queueing theory and stochastic modeling and include M/G/1 and GI/M/1-type Markov chain, quasi-birth-death processes, non-skip free queues and tree-like stochastic processes. Written for applied probabilists and numerical analysts, but accessible to engineers and scientists working on telecommunications and evaluation of computer systems performances, it provides a systematic treatment of the theory and algorithms for important families of structured Markov chains and a thorough overview of the current literature. The

book, consisting of nine Chapters, is presented in three parts. Part 1 covers a basic description of the fundamental concepts related to Markov chains, a systematic treatment of the structure matrix tools, including finite Toeplitz matrices, displacement operators, FFT, and the infinite block Toeplitz matrices, their relationship with matrix power series and the fundamental problems of solving matrix equations and computing canonical factorizations. Part 2 deals with the description and analysis of structure Markov chains and includes M/G/1, quasi-birth-death processes, non-skip-free queues and tree-like processes. Part 3 covers solution algorithms where new convergence and applicability results are proved. Each chapter ends with bibliographic notes for further reading, and the book ends with an appendix collecting the main general concepts and results used in the book, a list of the main annotations and algorithms used in the book, and an extensive index.

Sustainable Logistics Sweet & Maxwell

With extensive case studies for illustration, this is a practitioner's guide to an entirely new production system for construction management using flowline scheduling. Covering the entire process of presenting a comprehensive management system - from design, through measurement, scheduling, and visualization and control - its emphasis is on reducing cost and increasing quality. Drawing its components together into a management system, the authors not only include theory and explanations of how and why it works, but also examine and present a suite of methods for successful project implementation. Perfect as a how-to guide for researchers and advanced construction students to discover the simple application of the new techniques, and invaluable for acquiring the practical tools for planning and controlling projects.

The International Classification of Nonprofit Organizations - ICNPO Revision 1.0 Routledge

Despite bringing prosperity, industrialisation generally leads to increasing levels of pollution which has a detrimental impact on the environment. In response, legislation which seeks to control or prevent such impact has become common. Similarly, climate change and energy security have become major drivers for the regulatory regimes that have emerged in the energy field. Given the global or regional scope of many environmental problems, international cooperation is often necessary to ensure such legislation is effective. The EU and the UK have contributed to the

development of the environmental and energy law regimes currently in force, spanning across international, transnational and national levels. At the same time, practical responses to environmental and energy problems have largely been the focus of engineers, scientists and other technical experts. *Environmental & Energy Law* attempts to bridge the knowledge gap between legal developments designed to achieve environmental and/or energy-related objectives and the practical, scientific and technical considerations applicable to the same environmental problems. In particular, it attempts to convey a broad range of topical issues in environmental and energy law, from climate and energy regulation, technology innovation and transfer, to pollution control, environmental governance and enforcement. In addition the book outlines key sector specific legal regimes (including water, waste and air quality management), focusing on issues or topics that are particularly relevant to both environmental and energy lawyers, and engineering, science and technology-oriented professionals and students. In this vein, the book guides the reader on some basic practical applications of the law within scientific, engineering and other practical settings. The book will be useful to all those working or studying in the environmental or energy arena, including law students, legal professionals, engineering and science students and professionals. By adopting a multi-disciplinary approach to environmental and energy law, the book embraces all readerships and helps to address the often thorny problem of communication between scientists, engineers, lawyers and policy-makers.

Gaming Law Edward Elgar Publishing

How can organizations ensure that they can get best value for money in their procurement decisions? How can they stimulate innovations from their dedicated suppliers? With contributions from leading academics and professionals, this 2006 handbook offers expert guidance on the fundamental aspects of successful procurement design and management in firms, public administrations, and international institutions. The issues addressed include the management of dynamic procurement; the handling of procurement risk; the architecture of purchasing systems; the structure of incentives in procurement contracts; methods to increase suppliers' participation in procurement contests and e-procurement platforms; how to minimize the risk of collusion and of corruption; pricing and reputation mechanisms in e-procurement platforms; and how procurement can enhance innovation. Inspired by frontier research, it provides practical recommendations to managers, engineers and lawyers engaged in private and public procurement design.

This treatment of the basic theory of algebraic Riccati equations describes the classical as well as the more advanced algorithms for their solution in a manner that is accessible to both practitioners and scholars. It is the first book in which nonsymmetric algebraic Riccati equations are treated in a clear and systematic way. Some proofs of theoretical results have been simplified and a unified notation has been adopted. Readers will find a unified discussion of doubling algorithms, which are effective in solving algebraic Riccati equations as well as a detailed description of all classical and advanced algorithms for solving algebraic Riccati equations and their MATLAB codes. This will help the reader gain an understanding of the computational issues and provide ready-to-use implementation of the different solution techniques.

Datenschutz als Wettbewerbsvorteil Springer Nature

Convergence has gained an enormous amount of attention in media studies within the last several years. It is used to describe the merging of formerly distinct functions, markets and fields of application, which has changed the way companies operate and consumers perceive and process media content. These transformations have not only led business practices to change and required companies to adapt to new conditions, they also continue to have a lasting impact on research in this area. This book's main purpose is to shed some light on crucial phenomena of media and convergence management, while also addressing more specific issues brought about by innovations related to media, technologies, industries, business models, consumer behavior and content management. This book gathers insights from renowned academic researchers and pursues a highly interdisciplinary approach. It will serve as a valuable reference guide for students, practitioners and researchers interested in media convergence processes.
