Taryn Clark thought she'd outgrown the need to find her birth mother. She thought that a successful career and a comfortable life in the city were enough to be happy. Did she really need to

know about the woman who had given her away? Adopted at birth, her first few years were happy. It hadn't mattered that she didn't know her heritage; she had parents who loved her and wanted her. But divorce, and then death, ripped their tiny family apart, and at the tender age of six, she entered the foster care system. Over the next dozen years, she shuffled from home to home. Finding her roots seemed an impossible dream. But dreams are resilient. An unexpected discovery awakens old yearnings of belonging to a family, of being part of something bigger than herself. Finding the brief, ambiguous note from her birth mother is enough to unfurl the ribbons of hope still binding her heart. Her quest takes her to Lancaster County, Pennsylvania and the heart of the Plain community. Aided by her unique eye color, a healthy dose of luck, and the private investigator she hires, Taryn finds her birth family easily enough, but finding the truth is another matter. In all her musings, she never imagined a scenario where her mother might be Amish. She never imagined that the fabric of her life might be a patchwork of faith and fear, stitched together with a dark family secret. Taryn is determined to trace her roots, even if it means digging in the mud to do so. Now she's caught in the quicksand of a shocking discovery and the consequences of choices made, almost forty years ago. She'll risk everything to uncover the truth and to claim the family--and the roots--she so desperately craves.

In 1980 an exhibition of the Illuminated Manuscripts of René Char held in Paris took the artistic and literary worlds by surprise. It featured illustrations by twenty-eight artists of an array of Char's hand-written poems. Char's artistic associations, spanning seven decades, remain remarkable today. Not only was he amply illustrated by those he called his "substantial allies"; the dedicatory poems and prose pieces they inspired, written with

revelatory flair, constitute a unique corpus in the history of art and poetic enterprise. This book brings together an exemplary number of the artists Char prized over time: Dali and Kandinsky in the early years; later, Picasso, Braque and Miró; yet later, Vieira da Silva, Nicolas de Staël and Alexandre Galperine. It also considers the poet's fascination with Corot, Courbet, La Tour, Van Gogh and the cave art of Lascaux.

Intended as the primary text for introductory courses on medical anthropology, this book integrates human biological data relevant to health and disease with both evolutionary theory and the social environments that more often than not produce major challenges to health and survival. Because students who take this fastest-growing anthropology course come from a variety of disciplines (anthropology, biology, especially pre-med students, and health sciences, especially), the text does not assume anything beyond a basic high-school level familiarity with human biology and anthropology. The authors first present basic biological information on a particular health condition and then expand their analysis to include evolutionary, historical, and cross-cultural perspectives. Among the topics covered are nutrition, infectious disease, stress, reproductive health, behavioral disease, aging, race/racism and health, mental health, and healers and healing.

Electronic Diagrams is a ready reference and general guide to systems and circuit planning and in the preparation of diagrams for both newcomers and the more experienced. This book presents guidelines and logical procedures that the reader can follow and then be equipped to tackle large complex diagrams by recognition of characteristic 'building blocks' or 'black boxes'. The goal is to break down many of the barriers that often seem to

deter students and laymen in learning the art of electronics, especially when they take up electronics as a spare time occupation. This text is comprised of nine chapters; the first of which describes simple current carriers, with emphasis on conductors, connections, and terminals. Attention then turns to 'passive' circuit symbols, that is, those that do not require a power source to activate them, but operate under the influence of applied signals or voltages. The next chapter is devoted to the interpretation of electromechanical devices such as switches, relays, switching jacks, and batteries. This book also shows how various semiconductors are depicted in circuit diagrams by

grouping according to three main classes: diodes (non-thermionic), thyristors, and transistors. The remaining chapters focus on graphical representations of thermionic valves and cold cathode tubes; integrated circuit functions; transducers and miscellaneous symbols; and black boxes and block diagrams. A chapter on circuit diagram layouts concludes the book. This book will be useful to students and hobbyists who regularly follow the technical journals on graphical representation of circuits.
