The orthodox definition of international security put human displacement and refugees at the periphery. In contrast, this book demonstrates that human displacement can be both a cause and a

consequence of conflict within and among societies. As such, the management of refugee movements and the protection of displaced people should be a part of security policy.

At one point or another, every single one of us has or will have confronted the question: "So, what's the purpose of my doing?" Writing in the perspective of high-school students, who have many years of untapped opportunities ahead of us, we think that starting to ask ourselves this question is of utmost importance. Now, there are many

answers to this question, perhaps an infinite number of them. But in this short book, we propose the simple answer: to be happy. Of course, we aren't the first to jump aboard this train of thought. Humanity has thought about happiness as an integral goal of life for thousands of years, and individuals and institutions alike have continued to pursue this discussion today, whether that be through debate, research, or policies. And to this, we are thankful. Our predecessors' efforts have provided us - the next generation- with ample resources to put the pursuit of happiness into action on a societal scale, should we choose to do so. In light of this very mission to continue the historical momentum, we present this little book of ours -- to our peers, to aspiring young

leaders of the future who might wish to consider prospects of a happiness-oriented society, and to any reader interested in this quick read.

Refugees and Forced Displacement

From Kosovo to Kabul, the last decade witnessed growing interest in 'electoral engineering'. Reformers have sought to

achieve either greater government accountability through majoritarian arrangements or wider parliamentary diversity through proportional formula. Underlying the normative debates are important claims about the impact and consequences of electoral reform for political representation and voting behavior. The study compares and evaluates two broad schools of thought, each offering contrasting expectations. One popular approach claims that formal rules define electoral incentives facing parties, politicians and citizens. By changing these rules, rational choice institutionalism claims that we have the capacity to shape political behavior. Alternative cultural modernization theories differ in their emphasis on the primary motors driving human behavior,

their expectations about the pace of change, and also their assumptions about the ability of formal institutional rules to alter, rather than adapt to, deeply embedded and habitual social norms and patterns of human behavior.

Electoral Engineering Anthem Press The Millennium Dome, Braveheart and Rolls Royce cars. How do cultural icons reproduce and transform a sense of national identity? How does national identity vary across time and space, how is it contested, and what has been the impact of globalization upon national identity and culture? This book examines how national identity is represented, performed, spatialized and materialized through popular culture and in everyday life. National identity is revealed to be inherent in the things we often take for granted - from landscapes and eating habits, to tourism, cinema and music.

Our specific experience of car ownership and motoring can enhance a sense of belonging, whilst Hollywood blockbusters and national exhibitions provide contexts for the ongoing, and often contested, process of national identity formation. These and a wealth of other cultural forms and practices are explored, with examples drawn from Scotland, the UK as a whole, India and Mauritius. This book addresses the considerable neglect of popular cultures in recent studies of nationalism and contributes to debates on the relationship between 'high' and 'low' culture.

Some of the most brutal and long-lasting civil wars of our time involve the rapid formation and disintegration of alliances among warring groups, as well as fractionalization within them. It would be natural to suppose that warring groups form alliances based on shared identity considerations - such as Christian groups allying with Christian groups - but this is not what we see. Two groups that identify themselves as bitter foes one day, on the basis of some identity narrative, might be allies the next day and vice versa. Nor is any group, however homogeneous, safe from

internal fractionalization. Rather, looking closely at the civil wars in Afghanistan and Bosnia and testing against the broader universe of fifty-three cases of multiparty civil wars, Fotini Christia finds that the relative power distribution between and within various warring groups is the primary driving force behind alliance formation, alliance changes, group splits and internal group takeovers.
