By bridging the gap between conventional medical interventions and complementary approaches using aromatherapy, palliative care nurse and clinical aromatherapist, Carol Rose, demonstrates how an integrated and evidence-based approach can have the most significant impact on quality-of-life in patients with life-limiting illness. Aromatherapy is already a fundamental practice in many palliative care settings but its benefits remain under-researched and under-represented. Each chapter of this book incorporates a person-centred focus to consider the integration of various aromatherapy approaches for a range of end-of-life symptoms, alongside conventional medical options. The specificity of this approach and the emphasis of empowering patients to be involved in the process of choosing oils and applications, allows for improved results in the palliation of

common symptoms. Integrating Clinical Aromatherapy in Palliative Care has a foundation in research from the patient's point of view. The result is a fresh perspective that prioritises support of patient choices, skilful communication and individualised care, alongside the judicious use of essential oils and other botanical products. Collectively, aromatherapy can completely reframe holistic care to allow for greater emotional, social and spiritual expression.

Addressing the challenge of serious infection, especially MRSA, in hospitals, in the community, and in animals, Maggie Tisserand focuses on the scientifically proven effects of antibacterial essential oils, and their usefulness in managing infection, including the 'superbug'. She profiles the key essential oils - tea tree, manuka and thyme - covering everything from habitat, chemistry and commercial uses to the latest scientific research that proves their effectiveness against bacterial infection, and how they should be used. She also includes information about other methods that have been shown to help with the management of acute infection, including allicin from garlic, silver, manuka honey and phage therapy. Breaking new ground in the field of essential oils, this scientifically based but accessible book will be essential reading for aromatherapists, health professionals and everyone interested in effective ways in which to combat infection and stay healthy. With the increase in antibiotic-resistant bacteria and the danger of bacteria staying alive on surfaces and clothing, it is in the interests of every therapist and practitioner to be aware of these threats and instigate preventative measures.

Traditional methods for addressing conflict and healing have been largely replaced in elite settings by modern approaches. Rather than old and new complementing one another, bias is present. New is widely perceived as better among elite institutions, even when research indicates otherwise. Within the realm of international development, the need for cost-effective, sustainable, and successful methods of healing must be explored. Natural Healing as Conflict Resolution is an essential reference book that examines and addresses systemic bias towards natural healing methods and explores the mutually beneficial relationships of natural healing through human and non-human life forms in the context of resolving conflict. It illustrates not only the more obvious biological/physiological benefits of complementary approaches, but also the spiritual, emotional, and psychological benefits of integrating natural means of healing to resolve conflict. As such, the book acknowledges the effectiveness and articulates the benefits of traditional indigenous healing methods and how they can be used in complementary, mutually beneficial ways with modern practices. Highlighting emerging topics that include ecopsychology, parapsychology, and holistic medicine, this book is ideal for conflict resolution practitioners, psychologists, trauma counselors, veterans associations, pet therapists, nature organizations, academics, scientists, eco-architects and designers, international development policymakers, peacebuilding institutions, natural and traditional healers, alternative/integrative medicine practitioners, spiritualists, researchers, and students.

Highly Commended in the Health and Social Care category at the 2012 British Medical Association Book Awards Behaviours that challenge can significantly interfere with the quality of life of a person with dementia, as well as that of those who live with and care for them. Yet there is a great deal of confusion surrounding how such behaviours should be addressed. This book provides theory and practical guidance on the assessment and treatment of behaviours that challenge in dementia, with a particular emphasis on non-pharmacological approaches. The author describes the different categories and causes of challenging behaviour in people with dementia, and provides tried-and-tested models which will aid identification, assessment and treatment. A thorough evaluation of the use of psychotropic medication is provided, as well as of a wide range of psychological and biopsychosocial interventions. The book contains useful tools and protocol derived from the author's work at a specialist challenging behaviour unit, as well as case studies which demonstrate how the various models may be used in practice. This will be an invaluable resource for any professional involved in the assessment and treatment of behaviours that challenge in people with dementia, including psychiatrists, psychologists, community psychiatric nurses, GPs and occupational therapists. It will also be of interest to those involved in commissioning, providing and managing services.

Aromatherapy is increasingly incorporated into midwifery practice, particularly in midwife-led units. It is the most commonly used therapy by midwives and birthing practitioners but access to up-to-date safety information is limited. Almost 90% of women may be using complementary therapies during pregnancy and birth and so it is very important that midwives are aware of safe and appropriate use based on contemporary evidence. This book covers safety, effectiveness, evidence, benefits and risks, and legal, ethical and professional issues related to incorporating aromatherapy into maternity care. Useful charts and tables are included for quick reference in clinical practice, making this is the ultimate handbook for using aromatherapy in midwifery practice. The scientific basis behind aromatherapy, including relevant anatomy and physiology, chemistry and pharmacology are covered, as well as a critical appraisal of the contemporary research evidence supporting the use of aromatherapy in maternity care. Essential oil profiles of the oils that can be safely used in pregnancy, birth and postnatally are also included.
