ADDICTION TREATMENT covers the biological, psychological, and social aspects of alcoholism, eating disorders, compulsive gambling, and other addictions. As symbolized by the image on the book's cover, the authors bridge the gap between the popular twelve-step and harm-reduction approaches, thus illuminating how practitioners can guide clients down a trusted path that is tailored towards the client's particular needs. Through a number of first-person narratives about the experience of addiction, you will discover a realism and depth not commonly found in textbooks. In addition, the authors include topics such as the case against so-called underage drinking laws, that will draw you into the material and illustrate the importance of reducing harm within the biopsychological framework that ties the text together. Applying a trans-disciplinary approach, this book provides a comprehensive, research-based guide to understanding, implementing, and strengthening sustainable community health in diverse international settings. By examining the interdependence of environmental, economic, public health, community wellbeing and development factors, the authors address the systemic factors impacting health disparities, inequality and social justice issues. The book analyzes strategies based on a partnership view of health, in which communities determine their health and wellness working alongside local, state and federal health agencies. Crucially, it demonstrates that communities are themselves health systems and their wellbeing capabilities affect the health of individuals and the collective alike. It identifies health indicators and tools that communities and policy makers can utilize to sustain truly inclusive health systems. This book offers a unique resource for researchers and practitioners working across psychology, mental health, rehabilitation, public health, epidemiology, social policy, healthcare and allied health.

An eye-opening tour of the addiction treatment industry explores the gap between what should happen and what does What happens inside drug and alcohol rehabilitation centers and how rehab works are a mystery to those outside the industry - and sometimes even to those inside it. Anne M. Fletcher is a trusted New York Times bestselling health and medical writer who visited 15 addiction treatment centers—from outpatient programs for the indigent to famous celebrity rehabs; from the sites of renowned Twelve-Step centers to several unconventional programs—to find out what really happens. What she reveals ranges from inspirational to irresponsible, and, in some cases, potentially dangerous. Real Stories: As always with her books, Fletcher gets the inside story by turning to real people who “have been there,” interviewing more than 100 individuals whose compelling stories illustrate serious issues facing people in rehab and endemic in the rehab industry today. Connected Writer and Researcher who has earned the respect (and cooperation) of experts throughout the fields she’s taken on. Inside Rehab is no exception—Fletcher has interviewed more than 100 professionals working in the field, including a mix of rehab staffers and administrators as well as leading academics. Rehab is constantly covered in the media, as celebrities battle their drug and alcohol issues in the spotlight and reality TV puts recovery in prime time. Addiction is no longer only a personal struggle—it’s a pop culture phenomenon. Myth Busting: Fletcher exposes twelve supposed facts for the falsehoods they are, including “rehab is necessary for most people to recover from addictions;” “highly trained professionals provide most of the treatment in addiction programs;” and “drugs should not be used to treat a drug addict.” Fletcher’s most important finding is the alarming discrepancy between the treatments being employed at many rehab centers and the treatments recommended by leading experts and supported by scientific research. Guidance and Practical Solutions: Inside Rehab also highlights what is working, spotlights state-of-the-art programs and practices, and offers advice and guidance for people seeking quality care and treatment for themselves or those they care about. Inside Rehab is the first book to give readers a thoughtful, sensitive, and bracingly honest insider’s view of the drug and alcohol rehab industry in America. For people seeking quality care for themselves or a loved one, Inside Rehab is essential reading, offering a wealth of accurate information and wise guidance.

Adolescents have unique nutritional needs when compared to young children and adults. As youth go through physical, cognitive, and behavioral development, nutrition needs are dynamic and changing. If these needs go undetected and remain unaddressed, the results can derail physical and social maturation

and include life-long effects on health. This comprehensive text offers a multidisciplinary perspective on aspects of adolescent nutrition. Using clinical cases, it covers relevant topics related to adolescent health including normal development, chronic health conditions, and complex biopsychosocial dynamics, among others. The first section of the text contains an overview of adolescent nutrition that is further broken down into more specific topics such as developmental nutrition needs, needs of active youth and athletes and media influences on body image. The next section focuses on health disparities such as culturally appropriate care, health equity, international considerations and food insecurity. The following section specifically addresses eating disorders ranging from anorexia and bulimia to binge eating. Finally, the last section covers additional health considerations such as polycystic ovarian syndrome, teen pregnancy, substance use and gender non-conforming youth. Written by experts in the field, this book is a helpful resource for primary care medical providers, registered dietitians/nutritionists (RDN), adolescent medicine specialists, as well as advanced practice nurses, physician assistants, psychologists, licensed social workers, and certified athletic trainers. /div

*Pharmacology of Recreational Drugs: The Neurology of How Drugs Work* introduces readers to neurobiology and provides detailed mechanistic explanations of how drugs work. After an opening explanation of normal nerve and brain function, the text goes on to explore how various drugs change the way a person feels and sees the world. While exploring topics such as pharmacokinetics and pharmacodynamics, addiction, cognition, opioids, alcohol, cannabis, hallucinogens, and CNS stimulants the book carefully explains connections starting at the minuscule level of a drug binding to a receptor, through to the holistic - the physiological and psychological effects of the drug on the person. Along the way students learn about the way each drug effects neurons, the role of these neurons in the brain, and the neurobiology of the drug experience. Each chapter includes multiple choice and essay questions for each. Suggestions for further reading create opportunities for extended exploration of the topics. Common-sense and approachable in style, yet comprehensive in coverage, *Pharmacology of Recreational Drugs* is well-suited to courses in biology, neurobiology, and health sciences, as well as those in nursing programs. It is also suitable for the novice, non-science reader and no prerequisite knowledge is required.

For millennia, people have universally engaged in ecstatic experience as an essential element in ritual practice, spiritual belief and cultural identification. This volume offers the first systematic investigation of its myriad roles and manifestations in the ancient Mediterranean and Near East. The twenty-nine contributors represent a broad range of scholarly disciplines, seeking answers to fundamental questions regarding the patterns and commonalities of this vital aspect of the past. How was the experience construed and by what means was it achieved? Who was involved? Where and when were rites carried out? How was it reflected in pictorial arts and written records? What was its relation to other components of the sociocultural compact? In proposing responses, the authors draw upon a wealth of original research in many fields, generating new perspectives and thought-provoking, often surprising, conclusions. With their abundant cross-cultural and cross-temporal references, the chapters mutually enrich each other and collectively deepen our understanding of ecstatic phenomena thousands of years ago. Another noteworthy feature of the book is its illustrative content, including commissioned reconstructions of ecstatic scenarios and pairings of works of Bronze Age and modern psychedelic art. Scholars, students and other readers interested in antiquity, comparative religion and the social and cognitive sciences will find much to explore in the fascinating realm of ecstatic experience in the ancient world.
