The Family Context of Parenting in Children's Adaptation to Elementary School is a result of a longitudinal prevention study of 100 families

begun the year before their first children entered kindergarten. Each family went through an assessment and then a subset was randomly chosen for group intervention. The children in both groups were then studied as they progressed through kindergarten and first grade to assess the quality of their adaptation to the school environment. The text focuses on how parent-child relationships are only one determinant of a child's academic competence, social competence, and behavior. Rather, these relationships must be understood in the context of the role they play within the family as a system. It also addresses the recent challenges to claims about the impact of parents on their children's development. The book sheds additional light on family influences within the larger social environment as a key determinant of the quality of children's adjustment to schooling. It appeals to scientists, professionals, and parents alike.

The changing strategic environment of the 1990s has been characterised by events such as the Middle-East conflagration and super-power disarmament which represent the two opposing ends of the present security spectrum. The framing of appropriate defence policies now depends on increased NATO industrial defence restructuring and cooperation, especially within Europe. This book identifies, explains and analyses the key issues involved in Europe's defence-industrial reorganisation progress. It tackles head-on controversial issues such as: divergences between practice and policy in NATO US-European positions; the high costs of collaborative ventures; competition vs concentration and the complexities of adopting an European defence consensus within NATO. At a time when the diminution of NATO's defence-industrial base

goes hand-in-hand with product reorientation and specialization, this book provides concise, critical and contemporary assessment of European and NA TO collaborative issues.

This innovative text offers comprehensive coverage of the discipline of social policy and its central relevance to social work, social care and related practice in Scotland.

Designed to complement teaching and study associated with the new Honours degree in Social Work (Scottish Executive 2003), it fills a notable gap in the literature on this subject and will be essential reading for students, professionals and academics within a variety of health and social care occupations.

Child Development for Child Care and Protection Workers is a classic text for students and practitioners in the child care and protection field

which summarises important current thinking on child development and applies it directly to practice. The book covers key issues such as resilience and vulnerability and the impact of protective or adverse environments. Different stages of development (infancy, school age and adolescence) are discussed, and attachment theory is used to offer insights into the impact of abuse and neglect on development. A key feature is the inclusion of case studies and activities to allow the reader to improve their understanding and reflect on good practice. This second edition is fully updated to reflect the new policy context and multi-disciplinary practice, and contains updated practice examples to take into account contemporary issues affecting children and young people. This book encourages practitioners to consider each child as an individual with unique circumstances, and links theory and practice in an imaginative and sympathetic way. It will be essential reading for all child care and protection workers.

Attachment in Intellectual and Developmental Disability "Skillfully introduced and edited by Helen Fletcher and her colleagues, this long-needed collection of excellent chapters on attachment and disability reveals the vast wellspring of resilience that persons with disability possess - or can be helped to achieve. Readers will discover how best to support a family member, client or friend with a 'disability'. A definitive resource for multiple disciplines, this book is surely required reading for all those working in the health professions aimed at addressing the needs of those with severe physical, mental or emotional impairments." Professor Howard Steele, New School for Social Research "This informative, comprehensive text is unique, and is destined to become an invaluable national and international resource on attachment issues in the field of intellectual and developmental disabilities. Given the breadth and depth of this

book, practitioners can use it both as a guide in practice and as a resource for research purposes. Both the editors and contributors are to be congratulated for introducing attachment theory to a wider audience, who will all, I am sure, appreciate the centrality and importance of this theoretical framework to their everyday practice.” Professor Bob Gates, University of West London This title in The Wiley Series in Clinical Psychology is the first to explore the role of attachment theory in understanding and helping children and adults with intellectual and developmental disabilities (IDD). There is a growing evidence base of interventions for IDD underpinned by attachment theory,

including direct intervention and the application of attachment theory to understand the interactions and relationships that occur between individuals with IDD and those who support them. Attachment in Intellectual and Developmental Disability brings together leading clinicians and researchers to present and integrate cutting-edge models and approaches that have previously been accessible only to specialists. They discuss the role of attachment theory in clinical practice when working across the lifespan of people with IDD, the theoretical basis of attachment difficulties, and how these difficulties are presented. They also discuss practical approaches to assessment and

intervention, using clear case studies to illustrate the applications of attachment theory to clinical work.
