This book
explains how
and why
information

literacy can help to foster critical thinking and discerning attitudes, enabling citizens to play an informed role in society and its democratic processes. In early 21st century societies, individuals and organisations are deluged with information, particularly online information. Much of this is useful, valuable or enriching. But a lot of it is of dubious quality and

provenance, if not downright dangerous. Misinformation forms part of the mix. The ability to get the most out of the information flow, finding, interpreting and using it, and particularly developing a critical mindset towards it, requires skills, know-how, judgement and confidence – such is the premise of information literacy. This is true for many aspects of human endeavour,

including education, work, health and self-enrichment. It is notably true also for acquiring an understanding of the wider world, for reaching informed views, for recognising bias and misinformation, and thereby for playing a part as active citizens, in democratic life and society. This groundbreaking and uniquely multi-disciplinary book explores how information

literacy can contribute to fostering attitudes, habits and practices that underpin an informed citizenry. The 13 chapters each come from a particular perspective and are authored by international experts representing a range of disciplines: information literacy itself, but also political science, pedagogy, information science, psychology. Informed Societies: Why

Information literacy matters for citizenship, participation and democracy covers: - why information literacy and informed citizens matter for healthy, democratic societies - information literacy's relationship with political science - information literacy's relationship with human rights - how information literacy can help foster citizenship, participation, empowerment

and civic engagement in different contexts: school students, refugees, older people and in wider society - information literacy as a means to counter misinformation and fake news - the challenges of addressing information literacy as part of national public policy. The book will be essential reading for librarians and information professionals working in public

libraries, schools, higher education institutions and public bodies; knowledge and information managers in all sectors and student of library and information science students, especially those at postgraduate/ Masters level who are planning dissertations. Because of the topicality and political urgency of the issues covered, the book will also be of interest

to students of political science, psychology, education and media studies/journalism; policy-makers in the public, commercial and not-for-profit sectors and politicians implications of information use and information/digital literacy.

Their development

was full of false starts, failed ideas, and missed opportunities. Rookes Evelyn Bell Crompton was a pioneer in electrical engineering and road haulage who, by the turn of the century found himself in South Africa during the Boer War. Later, in WW1 his early work with the Landships Committee on tracked vehicles sought to break the stalemate of trench warfare. Although his tank designs

never saw combat the work he started was carried on by other pioneers and helped to usher in a dawn of armoured and mechanised warfare.
