Biology and  
Conservation of  
Northern Forest Owls

Tordotcom  
The purpose of this  
book is to examine  
urban forests in cities  
around the world. It will  
ask questions about  
the history,  
composition, structure,  
and management of

trees in urban areas. Data for this book was collected in 33 cities across broad geographical areas known as biomes. Constraints and opportunities imposed on urban forest composition, design, and management by the ecological characteristics of these biomes will be examined. The book will also address the cultural and historical factors that influenced the characteristics of urban forests around the world.

**Rainforest** Lerner Publications

A companion book for young readers based upon the explorations of the Americas in 1491, before those of Christopher Columbus.

**The Negro in the New World** IUCN

At the landmark 1992

United Nations Conference on Environment and Development (Earth Summit), solemn resolutions were made both to protect the world's biodiversity and to co-operate on managing natural forests in a sustainable and ecologically responsible way. If anything, given recent developments in issues such as climate change and poverty, the problem of protecting and sustaining forests should logically have become more important globally. Yet public interest in, and development support for, forest activities have declined and rates of forest loss remain stubbornly high. Why has this happened? This book seeks answers to this question. It examines

the often dysfunctional relationships between various members of the international forest constituency, which have so often prevented the formation of consensus. It also explores the tendency to pursue technical and politically convenient 'fixes' focused on the internal workings of the forest sector, while ignoring the overwhelming influence of external forces on the fate of forests. The result, all too often, has been programs which benefit a few powerful players and fail to provide real solutions. The book provides a new examination of and perspective on the international forest policy debate. It clarifies the reasons for global forest conflicts

and provides insight for future policy development. Including examples from both the developed and developing world, it provides an invaluable resource for researchers and graduate students in forest policy and international relations, as well as a useful reference for policymakers and professionals in the forest sector, the development community and conservationists. With significant global attention now focused on reducing carbon emissions from deforestation and forest degradation (REDD), the authors examine the promise and the potential problems that apply to this initiative.

*Pictorial Geography of*

*the World: New world*  
Island Press  
First published in 1997.  
An introductory text on environmental management with a global coverage, including attention paid to the Third World. The perspective of the book is geographical and the treatment draws on the broad and complementary experience of the two authors.

### **New World Monkeys**

Simon and Schuster  
Old-growth forests represent a lofty ideal as much as an ecosystem—an icon of unspoiled nature, ecological stability, and pristine habitat. These iconic notions have actively altered the way society relates to old-growth forests, catalyzing major changes in policy and management. But how

appropriate are those changes and how well do they really serve in reaching conservation goals? *Old Growth in a New World* untangles the complexities of the old growth concept and the parallel complexity of old-growth policy and management. It brings together more than two dozen contributors—ecologists, economists, sociologists, managers, historians, silviculturists, environmentalists, timber producers, and philosophers—to offer a broad suite of perspectives on changes that have occurred in the valuing and management of old-growth forests in the Pacific Northwest over the past thirty years. The book • introduces the issues and history of old-

growth values and conservation in the Pacific Northwest; • explores old growth through the ideas of leading ecologists and social scientists; • addresses the implications for the future management of old-growth forests and considers how evolving science and social knowledge might be used to increase conservation effectiveness. By confronting the complexity of the old-growth concept and associated policy and management challenges, *Old Growth in a New World* encourages productive discussion on the future of old growth in the Pacific Northwest and offers options for more effective approaches to conserving forest

biodiversity.

Medicinal Resources of the Tropical Forest JHU Press

The forest is a whole different world...Felix Salten's classic story of wild and tame animals coming together is brought vividly to life in this refreshed edition, ideal for collecting. To the animals of Lodge Farm, the woods are a forbidden place filled with danger and uncertainty. For the wild animals in the forest, the farm is just as frightening, because Man lives there. The two worlds are next to one another, but couldn't be further apart. When the groups, tame and wild, begin to interact, each begins to question how life would be different on the other side. Manni the donkey

ventures into the forest for an adventure, while a doe and her two fawns seek the safety of the barn when poachers threaten them in the woods. Will the animals choose to stay in their new lives? Or will the call of home be too great?

*Two Trees Make a Forest* Springer

With original research and interviews with survivors, a journalist reveals the brutal yet forgotten battles in Latvia during the final months of WWII. While the eyes of the world were on Hitler's bunker, more than half a million men fought six cataclysmic battles in the fields and forests of Western Latvia known as the Courland Pocket. Just an hour from the capital Riga, German forces bolstered by Latvian

Legionnaires were trapped with their backs to the Baltic. Forced into uniform by Nazi and Soviet occupiers, Latvian fought Latvian – sometimes brother against brother. Hundreds of thousands of men died for little territorial gain in unimaginable slaughter. When the Germans capitulated, thousands of Latvians continued a war against Soviet rule from the forests for years afterwards. An award-winning documentary journalist, Vincent Hunt travels through the modern landscape gathering eye-witness accounts, piecing together the stories of those who survived. He meets veterans who fought in the Latvian Legion, former

partisans and a refugee who fled the Soviet advance to later become President, Vaira Vike-Freiberga. A survivor of the little-known concentration camp at Popervale details his escape from a death march and subsequent survival in the forests with a Soviet partisan group - and a German deserter. With detailed maps and expert contributions alongside rare newspaper archives, photographs from private collections and extracts from diaries translated from Latvian, German and Russian, Hunt assembles a ghastly picture of death and desperation in a nation both gripped by war and at war with itself.

Biodiversity and Sustainable Use of Kyrgyzstan's Walnut-

fruit Forests Princeton University Press

This "stunning journey through a country that is home to exhilarating natural wonders, and a scarring colonial past . . . makes breathtakingly clear the connection between nature and humanity, and offers a singular portrait of the complexities inherent to our ideas of identity, family, and love" (Refinery29). A chance discovery of letters written by her immigrant grandfather leads Jessica J. Lee to her ancestral homeland, Taiwan. There, she seeks his story while growing closer to the land he knew. Lee hikes mountains home to Formosan flamecrests, birds found nowhere else on earth, and swims in a lake of

drowned cedars. She bikes flatlands where spoonbills alight by fish farms, and learns about a tree whose fruit can float in the ocean for years, awaiting landfall. Throughout, Lee unearths surprising parallels between the natural and human stories that have shaped her family and their beloved island. Joyously attentive to the natural world, Lee also turns a critical gaze upon colonialist explorers who mapped the land and named plants, relying on and often effacing the labor and knowledge of local communities. *Two Trees Make a Forest* is a genre-shattering book encompassing history, travel, nature, and memoir, an extraordinary narrative showing how

geographical forces are interlaced with our family stories.

*The World Atlas of Trees and Forests*  
Routledge

The Oxford Handbook of Modern African History represents an invaluable tool for historians and others in the field of African studies. This collection of essays, produced by some of the finest scholars currently working in the field, provides the latest insights into, and interpretations of, the history of Africa - a continent with a rich and complex past. An understanding of this past is essential to gain perspective on Africa's current challenges, and this accessible and comprehensive volume will allow readers to explore various aspects - political,

economic, social, and cultural - of the continent's history over the last two hundred years. Since African history first emerged as a serious academic endeavour in the 1950s and 1960s, it has undergone numerous shifts in terms of emphasis and approach, changes brought about by political and economic exigencies and by ideological debates. This multi-faceted Handbook is essential reading for anyone with an interest in those debates, and in Africa and its peoples. While the focus is determinedly historical, anthropology, geography, literary criticism, political science and sociology are all employed in this ground-breaking study of Africa's past.

*A Natural History of the New World* Infobase Publishing  
 Rainforests have long been recognized as hotspots of biodiversity—but they are crucial for our planet in other surprising ways. Not only do these fascinating ecosystems thrive in rainy regions, they create rain themselves, and this moisture is spread around the globe. Rainforests across the world have a powerful and concrete impact, reaching as far as America's Great Plains and central Europe. In *Rainforest: Dispatches from Earth's Most Vital Frontlines*, a prominent conservationist provides a comprehensive view of the crucial roles rainforests serve, the state of the world's

rainforests today, and the inspirational efforts underway to save them. In *Rainforest*, Tony Juniper draws upon decades of work in rainforest conservation. He brings readers along on his journeys, from the thriving forests of Costa Rica to Indonesia, where palm oil plantations have supplanted much of the former rainforest. Despite many ominous trends, Juniper sees hope for rainforests and those who rely upon them, thanks to developments like new international agreements, corporate deforestation policies, and movements from local and Indigenous communities. As climate change intensifies, we have already begun to see the effects of rainforest

destruction on the planet at large. *Rainforest* provides a detailed and wide-ranging look at the health and future of these vital ecosystems. Throughout this evocative book, Juniper argues that in saving rainforests, we save ourselves, too. *The New World* Pensoft Publishers  
A comprehensive account of the origins, evolution, and behavior of South and Central American primates *New World Monkeys* brings to life the beauty of evolution and biodiversity in action among South and Central American primates, who are now at risk. These tree-dwelling rainforest inhabitants display an unparalleled variety in size, shape, hands, feet, tails, brains,

locomotion, feeding, social systems, forms of communication, and mating strategies. Primatologist Alfred Rosenberger, one of the foremost experts on these mammals, explains their fascinating adaptations and how they came about. *New World Monkeys* provides a dramatic picture of the sixteen living genera of New World monkeys and a fossil record that shows that their ancestors have lived in the same ecological niches for up to 20 million years—only to now find themselves imperiled by the extinction crisis. Rosenberger also challenges the argument that these primates originally came to South America from Africa by floating across the Atlantic on a

raft of vegetation some 45 million years ago. He explains that they are more likely to have crossed via a land bridge that once connected Western Europe and Canada at a time when many tropical mammals transferred between the northern continents. Based on the most current findings, *New World Monkeys* offers the first synthesis of decades of fieldwork and laboratory and museum research conducted by hundreds of scientists. *Gallatin National Forest (N.F.)* Joseph Henry Press Introduces several varieties of New World monkeys, the monkeys of Central and South America, discussing their physical and social characteristics,

their habitats, their diets, and the fact that the destruction of the rain forests is putting many varieties on the endangered species list.

**The Oxford Handbook of Modern African History**

Simon and Schuster Enth.: Most papers presented in a symposium on Nov. 19, 1988 at the annual meeting of the American Anthropological Association in Phoenix, Ariz.

*The Word for World is Forest* Transaction Publishers

More than 12,000 years ago, in one of the greatest triumphs of prehistory, humans colonized North America, a continent that was then truly a new world. Just when and how they did so

has been one of the most perplexing and controversial questions in archaeology. This dazzling, cutting-edge synthesis, written for a wide audience by an archaeologist who has long been at the center of these debates, tells the scientific story of the first Americans: where they came from, when they arrived, and how they met the challenges of moving across the vast, unknown landscapes of Ice Age North America. David J. Meltzer pulls together the latest ideas from archaeology, geology, linguistics, skeletal biology, genetics, and other fields to trace the breakthroughs that have revolutionized our understanding in recent years. Among many other topics, he explores disputes over

the hemisphere's oldest and most controversial sites and considers how the first Americans coped with changing global climates. He also confronts some radical claims: that the Americas were colonized from Europe or that a crashing comet obliterated the Pleistocene megafauna. Full of entertaining descriptions of on-site encounters, personalities, and controversies, this is a compelling behind-the-scenes account of how science is illuminating our past.

*The New World*

Springer Nature

A marvelously illustrated look at the world's diverse forests and their ecosystems. The earth's forests are havens of nature

supporting a diversity of life. Shaped by climate and geography, these vast and dynamic wooded spaces offer unique ecosystems that shelter complex and interdependent webs of flora, fungi, and animals. The World Atlas of Trees and Forests offers a beautiful introduction to what forests are, how they work, how they grow, and how we map, assess, and conserve them.

Provides the most wide-ranging coverage of the world's forests available. Takes readers beneath the breathtaking variety of wooded canopies that span the globe. Profiles a wealth of tree species, with enlightening and entertaining natural-history highlights along

the wayFeatures  
stunning color photos,  
maps, and  
graphicsDraws on the  
latest cutting-edge  
research and  
technology, including  
satellite imagery

### **Blood in the Forest**

University of Chicago  
Press

Describes the tropical  
rain forest biome,  
including climate,  
geology, geography  
and biodiversity.

*Environmental  
Management* Helion  
and Company

The paleoecological  
history of the Americas  
is as complex as the  
region is broad:  
stretching from the  
Arctic Circle to Tierra  
del Fuego, the New  
World features some of  
the most extraordinary  
vegetation on the  
planet. But until now it  
has lacked a complete  
natural history. Alan

Graham remedies that  
with *A Natural History  
of the New World*. With  
plants as his scientific  
muse, Graham traces  
the evolution of  
ecosystems, beginning  
in the Late Cretaceous  
period (about 100  
million years ago) and  
ending in the present,  
charting their  
responses to changes  
in geology and climate.  
By highlighting plant  
communities' roles in  
the environmental  
history of the  
Americas, Graham  
offers an overdue  
balance to natural  
histories that focus  
exclusively on animals.  
Plants are important in  
evolution's splendid  
drama. Not only are  
they conspicuous and  
conveniently stationary  
components of the  
Earth's ecosystems,  
but their extensive  
fossil record allows for

a thorough reconstruction of the planet's paleoenvironments. What's more, plants provide oxygen, function as food and fuel, and provide habitat and shelter; in short, theirs is a history that can speak to many other areas of evolution. *A Natural History of the New World* is an ambitious and unprecedented synthesis written by one of the world's leading scholars of botany and geology. *Tropical Forests* Fort Collins, Colo. : Rocky Mountain Forest and Range Experiment Station  
 This book opens readers' eyes to the enormous resources of the Earth's rain forests and the potential impact of their destruction in terms of

human health. *New World heroes, Lincoln and Garfield, by the author of 'Our queen'*. Univ of California Press  
 This history of the political economy, social relations, and cultural debates that animated Spanish North America from 1500 until 1800 illuminates its centuries of capitalist dynamism and subsequent collapse into revolution. *Forest World* OUP Oxford  
 This book is part of a two-volume set that offers an innovative approach towards developing methods and tools for assigning conservation categories of threatened taxa and their conservation strategies by way of different phases of eco-

restoration in the context of freshwater river systems of tropical bio-geographic zones. The set provides a considerable volume of research on the biodiversity component of river ecosystems, seasonal dynamics of physical chemical parameters, geo-hydrological properties, types, sources and modes of action of different types of pollution, river restoration strategies and methodologies for the ongoing ecological changes of river ecosystems. Volume 2 highlights biodiversity potential in aiding the resistance and resilience of riverine ecosystem functioning and their synergistic

effects on ongoing environmental perturbations. Comprehensive information on the conservation of river-associated-wildlife is provided, covering the impacts of pollution, land-use changes, river policies, and ecosystem restoration strategies. The book offers an innovative approach towards developing methods and tools for assigning conservation categories of threatened taxa, and covers their conservation strategies by way of different phases of eco-restoration in the context of freshwater river systems of tropical bio-geographic zones.
