Derived from the renowned multi-volume International Encyclopaedia of Laws, this concise exposition and analysis of the essential elements of law with regard to family relations, marital property, and succession to estates in South Africa covers the legal rules and customs pertaining to the intertwined civic status of persons, the family, and property. After an informative general introduction, the book proceeds to an in-depth discussion of the sources and instruments of family and succession law, the authorities that adjudicate and administer the laws, and issues surrounding the person as a legal entity and the legal disposition of property among family members. Such matters as nationality, domicile, and residence; marriage, divorce, and cohabitation; adoption and guardianship; succession and inter vivos arrangements; and the acquisition and administration of estates are all treated to a degree of depth that will prove useful in nearly any situation likely to arise in legal practice. The book is primarily designed to assist lawyers who find themselves having to apply rules of international private law or otherwise handling cases connected with South Africa. It will also be of great value to students and practitioners as a quick guide and easy-to-use practical resource in the field, and especially to academicians and researchers engaged in comparative studies by providing the necessary, basic material of family and succession law.

Through a series of intricate informal processes and human-centric institutional arrangements, beneficiaries of South African government-subsidized housing force formally registered properties into informality. Sandile Mbatha explores the concept of informality in relation to how such beneficiaries challenge predominant understandings of property relations. These practices are embedded in complex urban tenure dynamics that prevail in post-colonial societies; societies, in which the state's imposition of predominantly western forms of tenure and property rights ignore the anthropological nature of housing.

For a long time, economic research on Africa was not seen as a profitable venture intellectually or professionally-few researchers in top-ranked institutions around the world chose to become experts in the field. This was understandable: the reputation of Africa-centered economic research was not enhanced by the well-known limitations of economic data across the continent. Moreover, development economics itself was not always fashionable, and the broader discipline of economics has had its ups and downs, and has been undergoing a major identity crisis because it failed to predict the Great Recession. Times have changed: many leading researchers-including a few Nobel laureates-have taken the subject of Africa and economics seriously enough to devote their expertise and creativity to it. They have been amply rewarded: the richness, complexities, and subtleties of African societies, civilizations, rationalities, and ways of living, have helped renew the humanities and the social sciences-and economics in particular-to the point that the continent has become the next major intellectual frontier to researchers from around the world. In collecting some of the most authoritative statements about the science of economics and its concepts in the African context, this handbook (the first of two volumes) opens up the diverse acuity of commentary on exciting topics, and in the process challenges and stimulates the quest for knowledge. Wide-ranging in its scope, themes, language, and approaches, this volume explores, examines, and assesses economic thinking on Africa, and Africa's contribution to the discipline. The editors bring a set of powerful resources to this endeavor, most notably a team of internationally-renowned economists whose diverse viewpoints are complemented by the perspectives of philosophers, political scientists, and anthropologists.

Stock markets are not efficient, returns are incommensurate with risk, investors are irrational, bubbles and crashes recur regularly, analysts are usually wrong, economists even more so, luck is mostly mistaken for skill, myths and misconceptions abound and most of the industry participants are simply noise generators. This is even more true for emerging markets. South Africa can be termed a developed emerging market and is the newest member of the BRICS group. The Effective Investor is the first book to deal specifically with investing in the South African stock market, filling a surprising gap given the widespread interest that has been shown in South Africa as an emerging market and the gateway to the resource-rich African continent. Understanding the South African market provides insight into the paths that emerging and frontier markets will follow in future. While the investment lessons from the South African market outlined in this book are universal, understanding some of its peculiarities is also important. For example, some insight into the behaviour of the currency, the rand, is clearly critical in terms of any investment in this market, as well as in providing some understanding of other volatile emerging market currencies, as well as

because it is often treated as the most liquid proxy for these currencies, particularly during upheavals. Similarly, the techniques highlighted in the book for dealing with volatility are applicable to similar markets elsewhere. South Africa is also an attractive market in its own right. It has been the third-best performing stock market in the world since 1900, and has weathered the great financial crisis with flying colors. The book provides readers with the findings of leading-edge research conducted into the South African stock market, the results of which are normally reserved for professional institutions and is written by a practicing, top-rated investment professional. The book also has guest contributions from some of South Africa's most astute professional analysts and fund managers on their specific areas of expertise, providing exceptional insight into current investment thinking. The Effective Investor is essential reading for every potential, novice or professional investor and investment adviser in emerging markets who wants to understand the most important principles of the South African stock market to ensure successful investing.

The book grew out of the recognition of the need for a textbook aimed specifically at foundational tax knowledge. At this level it would be more appropriate to remove some of the complexity of the tax legislation and provide users with a basic understanding of the mechanics of the core tax computations. Once users establish a base of tax knowledge they will be better prepared to graduate to the use of the full-version "Notes on South African Income Tax" in advanced tax courses [The Cumulative Book Index](#) Kluwer Law International B.V.

**Structural Transformation in South Africa** World Bank Publications

Our Continent, Our Future presents the emerging African perspective on this complex issue. The authors use as background their own extensive experience and a collection of 30 individual studies, 25 of which were from African economists, to summarize this African perspective and articulate a path for the future. They underscore the need to be sensitive to each country's unique history and current condition. They argue for a broader policy agenda and for a much more active role for the state within what is largely a market economy. Finally, they stress that Africa must, and can, compete in an increasingly globalized world and, perhaps most importantly, that Africans must assume the leading role in defining the continent's development agenda.

**Our Continent, Our Future** UN-HABITAT

Taking South Africa as an important case study of the challenges of structural transformation, the book offers a new micro-meso level framework and evidence linking country-specific and global dynamics of change, with a focus on the current challenges and opportunities faced by middle-income countries.

Each chapter introduces and explains the concepts involved, illustrates how figures should be computed, and indicates how items should be disclosed.

World-renowned economist Klaus Schwab, Founder and Executive Chairman of the World Economic Forum, explains that we have an opportunity to shape the fourth industrial revolution, which will fundamentally alter how we live and work. Schwab argues that this revolution is different in scale, scope and complexity from any that have come before. Characterized by a range of new technologies that are fusing the physical, digital and biological worlds, the developments are affecting all disciplines, economies, industries and governments, and even challenging ideas about what it means to be human. Artificial intelligence is already all around us, from supercomputers, drones and virtual assistants to 3D printing, DNA sequencing, smart thermostats, wearable sensors and microchips smaller than a grain of sand. But this is just the beginning: nanomaterials 200 times stronger than steel and a million times thinner than a strand of hair and the first transplant of a 3D printed liver are already in development. Imagine "smart factories" in which global systems of manufacturing are coordinated virtually, or implantable mobile phones made of biosynthetic materials. The fourth industrial revolution, says Schwab, is more significant, and its ramifications more profound, than in any prior period of human history. He outlines the key technologies driving this revolution and discusses the major impacts expected on government, business, civil society and individuals. Schwab also offers bold ideas on how to harness these changes and shape a better future—one in which technology empowers people rather than replaces them; progress serves society rather than disrupts it; and in which innovators respect moral and ethical boundaries rather than cross them. We all have the opportunity to contribute to developing new frameworks that advance progress.

**The Effective Investor** OECD Publishing

This work is an analysis of economic relations in South Africa. It analyses the work of numerous historians on inequality and exploitation in South Africa around a single theme: the systematic and progressive economic exploitation of Indigenous people by settler groups. Second, the author argues that, despite South Africa's transition to democracy, its society is as unequal - if not more so - than before.
