Konsep Pembangunan berkelanjutan  
(Sustainable development) telah menjadi  
konsep pembangunan nasional yang harus  
diterapkan untuk menjamin kesinam-

bugan pemanfaatan sumberdaya alam yang kita miliki. Dalam konteks Daerah Aliran Sungai (DAS), terwujudnya konsep pembangunan berkelanjutan tersebut memerlukan: (1) Pemahaman menyeluruh tentang hubungan timbal-balik antara sumberdaya alam (obyek) dan manusia (subyek pembangunan), dan (2) Pemahaman prinsip-prinsip hidrologi/ekologi serta menunjukkan bagaimana menerapkan prinsip-prinsip tersebut dalam pengelolaan sumberdaya alam. Berangkat dari pemikiran bahwa berhasilnya pengelolaan DAS tidak bisa dilepaskan dari pemahaman yang menyeluruh seperti tersebut

di atas, maka buku Hidrologi dan Pengelolaan DAS dimaksudkan untuk membekali para mahasiswa dan para profesional yang mempunyai komitmen terhadap terlanjurkannya pemanfaatan sumberdaya alam pada skala DAS.

Kawasan geopark merupakan kawasan yang memiliki berbagai macam potensi sumber daya alam, potensi geologi, dan juga potensi bencana alam. Oleh karena itu, kawasan geopark membutuhkan perhatian khusus untuk menjaga keseimbangan antara kesejahteraan

masyarakat dan isu lingkungan. Kesejahteraan yang diperoleh tanpa merusak lingkungan (konsep green economy) sebagai upaya atau mitigasi dalam kerusakan lingkungan untuk mencapai keberlanjutan pengelolaan lingkungan. Hal ini juga dapat dilakukan dengan perhitungan valuasi ekonomi, yaitu konsep dan pendugaan penilaian barang dan jasa, khususnya penilaian secara kelingkuangan. Dari nilai ekonomi lingkungan dapat dilakukan pemilihan prioritas untuk konservasi dan pembangunan yang sustainable. Selain itu, juga diketahui potensi dan kendala yang dihadapi dalam melestarikan kawasan geopark, sehingga secara ekonomi akan memperoleh hasil yang tinggi guna meningkatkan kesejahteraan masyarakat dan dari sisi lingkungan tidak menimbulkan terjadinya degradasi lingkungan.

When you're looking for a comprehensive and reliable text on large animal reproduction, look no further! the seventh edition of this classic text is geared for the undergraduate student in Agricultural

Sciences and Veterinary Medicine. In response to reader feedback, Dr. Hafez has streamlined and edited the entire text to remove all repetitious and nonessential material. That means you'll learn more in fewer pages. Plus the seventh editing is filled with features that help you grasp the concepts of reproduction in farm animals so you'll perform better on exams and in practice: condensed and simplified tables, so they're easier to consult an easy-to-scan glossary at the end of the book an expanded appendix, which includes graphic illustrations of assisted reproduction technology Plus, you'll find valuable NEW COVERAGE on all these topics: Equine Reproduction: expanded information reflecting today's knowledge Llamas (NEW CHAPTER) Micromanipulation of Gametes and In Vitro Fertilization (NEW CHAPTER!) Reach for the text that's revised with the undergraduate in mind: the seventh edition of Hafez's Reproduction in Farm Animals.

Model-Model Alometrik untuk Pendugaan Biomassa Pohon pada Berbagai Tipe Ekosistem Hutan di Indonesia (Indonesia versions) Cambridge University Press The principles and practices for forest

harvesting in Indonesia (2000) have been developed to provide a uniform set of minimum standards for logging practices in the production and limited production forests in Indonesia. The provide the standard for WHAT is involved in planning and implementing logging activities in natural forest and WHY certain operations should be undertaken. The Reduced Impact Logging (RIL) guidelines for Indonesia provides the mechanism for HOW the standards will be applied in the field or "how to do the work". Tractor skidding—mostly by crawlers and skidders—is the most common system (ca. 90%) used in the Indonesian Selective Cutting and Planting (TPTI) System. Considering the fact that familiarity with more environmentally friendly logging system (such as cable and aerial logging) is still lacking in Indonesia, often due to cost, etc., RIL guidelines focus on ground-based harvesting which can be implemented in the lowland and hill forests in Indonesia. Target groups of this guidelines are production supervisors, RIL planners, bolck inspectors, road network planners, road construction supervisors, machine operators, chainsaw operators,

tractor operators and their assistants.

Essential Microbiology 2nd Edition is a fully revised comprehensive introductory text aimed at students taking a first course in the subject. It provides an ideal entry into the world of microorganisms, considering all aspects of their biology (structure,

metabolism, genetics), and illustrates the remarkable diversity of microbial life by devoting a chapter to each of the main taxonomic groupings. The second part of the book introduces the reader to aspects of applied microbiology, exploring the involvement of microorganisms in areas as diverse as food and drink production, genetic engineering, global recycling systems and infectious disease. *Essential Microbiology* explains the key points of each topic but avoids overburdening the student with unnecessary detail. Now in full colour it makes extensive use of clear line diagrams to clarify sometimes difficult concepts or mechanisms. A companion web site includes further material including MCQs, enabling the student to assess their understanding of the main concepts that have been covered. This edition has been fully revised and updated to reflect the developments that have occurred in recent years and includes a completely new section devoted to medical microbiology. Students of any life science degree course will find this a concise and valuable introduction to microbiology.

Buku edisi kedua ini secara prinsip keilmuan dan tujuannya sama dengan edisi pertama (2010), perbedaan secara keilmuan adalah dijelaskannya secara lebih rinci hal-hal mengenai konsep epigenetik, teorema Bayes dalam menghitung risiko genetik dan, pengenalan tentang genetika forensik. Adapun beberapa penjelasan yang lebih diperinci adalah penghitungan nilai rata-rata populasi terutama yang terkait dengan nilai aditif dan dominan, penghitungan risiko genetik yang pada edisi pertama hanya dicontohkan pada gen terkait kromosom kelamin maka pada edisi ke-2 ini juga gen yang terdapat pada autosom dan penghitungannya berdasarkan informasi frekuensi alel dalam suatu populasi. Selain itu dalam bidang budaya contoh fenomena genetik

dilengkapi dengan gambar. Beberapa gambar dan tabel juga ditambahkan. Itulah perbaikan dan pengembangan yang menjadi pembeda antara edisi ke-1 dan ke-2, selain ada sedikit perubahan format penulisan dan koreksi salah ketik.
