 Introduction to Computing Systems: From bits & gates to C & beyond, now in its second edition, is designed to give students a better understanding of computing early in their college careers in order to give them a stronger foundation for later courses. The book is in two parts: (a) the underlying structure of a computer, and (b) programming in a high level language and programming methodology. To understand the computer, the authors introduce the LC-3 and provide the LC-3 Simulator to give students hands-on access for testing what they learn. To develop their understanding of programming and programming methodology, they use the C programming language. The book takes a "motivated" bottom-up approach, where the students first get exposed to the big picture and then start at the bottom and build their knowledge bottom-up. Within each smaller unit, the same motivated bottom-up approach is followed. Every step of the way, students learn new things, building on what they already know. The authors feel that this approach encourages deeper

understanding and downplays the need for memorizing. Students develop a greater breadth of understanding, since they see how the various parts of the computer fit together.

Radically change the way students learn from texts, extending beyond comprehension to critical reasoning and problem solving. Is your reading comprehension instruction just a pile of strategies? There is no evidence that teaching one strategy at a time, especially with pieces of text that require that readers use a variety of strategies to successfully negotiate meaning, is effective. And how can we extend comprehension beyond simple meaning? Bestselling authors Douglas Fisher, Nancy Frey, and Nicole Law propose a new, comprehensive model of reading instruction that goes beyond teaching skills to fostering engagement and motivation. Using a structured, three-pronged approach—skill, will, and thrill—students learn to experience reading as a purposeful act and embrace struggle as a natural part of the reading process. Instruction occurs in three phases: Skill. Holistically developing skills and strategies necessary for students to comprehend text, such as monitoring, predicting, summarizing, questioning, and inferring. Will. Creating the mindsets, motivations, and habits, including goal setting and choice, necessary for students to engage fully with texts. Thrill. Fostering the thrill of comprehension, so that students share their thinking with others or use their knowledge for something else. Comprehension is the structured framework you need to empower students to comprehend text and take action in the world.
