Endovascular Abdominal Aortic Repair- Endoleak Treatment John Wiley & Sons

Historically, vascular disease has been treated by a combination of open surgical procedures and medical management. Since the first description of a percutaneous procedure to dilate diseased lower limb arteries, the treatment of vascular disease has changed. Recent years have seen a rapidly increasing movement of endovascular treatment and procedures away from hospital settings to outpatient venues (office-based labs). New technologies offer enhanced capabilities that make it easier and more cost-effective to treat even complex cases on an outpatient basis. Office-Based Endovascular Centers synthesizes the entire process of operating an office-based practice - from regulation and legal issues through to business models and optimal endovascular procedures - helping you ensure the best the possible outcomes for your patients. Provides expert guidance from Dr. Krishna M. Jain, an experienced vascular surgeon and founding member of the Outpatient Endovascular and Interventional Society. Covers all aspects of opening and running an office-based endovascular center, including various models,

regulations, capital equipment, quality control, management of safety and complications, marketing and patient satisfaction, and much more. Discusses perspectives of the interventional cardiologist and interventional radiologist, various types of procedures, certification and accreditation, and conducting research in the center. Consolidates today's available information and experience in this timely area into one convenient resource.

Endovascularology Springer Science & Business Media

This book presents 100 challenging cases encountered in vascular surgery practice that were selected from the author's vascular registry of 7,000 vascular reconstructions (endovascular and open). Chapters include difficult surgical problems of patients with aortic, visceral and peripheral arterial aneurysms, with expert management of mycotic, inflammatory and ruptured aneurysms and major complications like aorto-duodenal fistula, graft infection or inferior vena cava injury. These reconstructions are representative of the "real world" experience of vascular surgery in the United States, and the selection of cases were based on either difficulty with case selection, or complex operative or an endovascular technique. The natural history of vascular reconstructions often leads to secondary

reconstructions, which are far more complex and therefore are included in significant numbers in this text. Both good and unsatisfactory results have been included and the lessons learned from the poor outcomes are emphasized. Invited commentaries from leading experts in the field have been added to a few chapters offering an alternate viewpoint in the management of patients with complex pathology. *Challenging Arterial Reconstructions: 100 Clinical Cases* serves as an invaluable resource to vascular surgeons that are learning or regularly performing open surgical or endovascular interventions.
