Flying Magazine McGraw-Hill/Glencoe

"This manual explains the theory, working techniques, and details of various types of glass, carbon and kevlar fibers, resins, adhesives, foams, and honeycombs for light airplane construction and repair. Further sections include the basics of manufacturing and design methods and are extremely relevant for those employed by component manufacturers and those involved in

aircraft design projects. Tooling and manufacturing methods, designing, stress, loads and load testing, vacuum bagging, autoclaves, and more are discussed in a technical, yet understandable manner."--actechbooks.com viewed Sept. 30, 2020.

Flying Magazine Canadian Aviation Maintenance Council = Conseil canadien de l'entretien des aéronefs

The material in this text is designed primarily as a resource for students of aviation technology who are preparing for FAA aircraft and powerplant maintenance certification. The text begins with a review of practical mathematics and a general presentation of the underlying principles of physics. The extensively revised chapter on aerodynamics provides students with a conceptual understanding of the mathematics and physics of flight. Chapters are well illustrated and present specific aspects of aircraft materials, fabrication processes, maintenance tools and techniques, and federal aviation regulations. This updated edition is consistent with FAA regulations and procedures. Copyright ©
