Patricia Crone reassesses one of the most widely accepted dogmas in contemporary accounts of the beginnings of Islam: the supposition that Mecca was a trading center. In addition, she seeks to elucidate sources on which we should reconstruct our picture of the birth of the new religion in Arabia.

*Universals in Comparative Morphology* Duke University Press

An argument for, and account of linguistic universals in the morphology of comparison, combining empirical breadth and theoretical rigor. This groundbreaking study of the morphology of comparison yields a surprising result: that even in suppletion (the wholesale replacement of one stem by a phonologically unrelated stem, as in good-better-best) there emerge strikingly robust patterns, virtually exceptionless generalizations across languages. Jonathan David Bobaljik describes the systematicity in suppletion, and argues that at least five generalizations are solid contenders for the status of linguistic universals. The major topics discussed include suppletion, comparative and superlative formation, deadjectival verbs, and lexical decomposition. Bobaljik's primary focus is on morphological theory, but his argument also aims to integrate evidence from a variety of subfields into a coherent whole. In the course of his analysis, Bobaljik argues that the assumptions needed bear on choices among theoretical frameworks and that the framework of Distributed Morphology has the right architecture to support the account. In addition to the theoretical implications of the

generalizations, Bobaljik suggests that the striking patterns of regularity in what otherwise appears to be the most irregular of linguistic domains provide compelling evidence for Universal Grammar. The book strikes a unique balance between empirical breadth and theoretical detail. The phenomenon that is the main focus of the argument, suppletion in adjectival gradation, is rare enough that Bobaljik is able to present an essentially comprehensive description of the facts; at the same time, it is common enough to offer sufficient variation to explore the question of universals over a significant dataset of more than three hundred languages.

*The Automobile Journal* Springer Science & Business Media

Adaptive management is an approach to managing social-ecological systems that fosters learning about the systems being managed and remains at the forefront of environmental management nearly 40 years after its original conception. Adaptive management persists because it allows action despite uncertainty, and uncertainty is reduced when learning occurs during the management process. Often termed "learning by doing", the allure of this management approach has entrenched the concept widely in agency direction and statutory mandates across the globe. This exceptional volume is a collection of essays on the past, present and future of adaptive management written by prominent authors with long experience in developing, implementing, and assessing adaptive management. Moving forward, the book provides policymakers, managers and scientists a powerful tool for managing for resilience in the face of uncertainty.

*Housing and Human Settlements in a World of Change* Gorgias Press

A comprehensive source of the information available on chemical agents, this book will increase the level of preparedness and response capability of

military and civilian practitioners responsible for chemical casualty care. Includes detailed explanations of chemical detectors and protection equipment, diagnosis, decontamination techniques, established and emerging countermeasures, and therapy techniques, as well as the history of chemical warfare and casualty management.

*Adaptive Management of Social-Ecological Systems* transcript Verlag

As developing societies emerge from legacies of conflict and authoritarianism, they are frequently beset by poverty, inequality, weak institutions, broken infrastructure, poor governance, insecurity, and low levels of social capital. These countries also tend to propagate massive human rights violations, which displace victims who are marginalized, handicapped, widowed, and orphaned--in other words, people with strong claims to justice. Those who work with others to address development and justice often fail to supply a coherent response to these concerns. The essays in this volume confront the intricacies--and interconnectedness--of transitional governance issues head on, mapping the relationship between two fields that, academically and in practice, have grown largely in isolation of one another. The result of a research project conducted by the International Center for Transitional Justice (ICTJ), this book explains how justice and recovery can be aligned not only in theory but also in practice, among both people and governments as they reform.

*The Mobility of Displaced Syrians* Springer Science & Business Media

Pink Noises brings together twenty-four interviews with women in electronic music and sound cultures, including club and radio DJs, remixers, composers, improvisers, instrument builders, and installation and performance artists. The collection is an extension of Pinknoises.com, the critically-acclaimed website founded by musician and scholar Tara Rodgers in 2000 to promote women in electronic music and make information about music production more accessible to women and girls. That site featured interviews that Rodgers conducted with women artists, exploring their personal histories, their creative methods, and the roles of gender in their work. This book offers new and lengthier interviews, a critical introduction, and resources for further research and technological engagement. Contemporary electronic music practices are illuminated through the stories of women artists of different generations and cultural backgrounds. They include the creators of ambient soundscapes, "performance novels," sound sculptures, and custom software, as well as the developer of the Deep Listening philosophy and the founders of the Liquid Sound Lounge radio show and the monthly Basement Bhangra parties in New York. These and many other artists open up about topics such as their conflicted relationships to formal music training and mainstream media representations of women in electronic music. They discuss using sound to work creatively with structures of time and space, and voice and language; challenge distinctions of nature and culture; question norms of technological practice; and balance their needs for productive solitude with collaboration and community. Whether designing and building modular synthesizers with analog circuits or performing with a wearable apparatus that translates muscle movements into electronic sound, these artists expand notions of who and what counts in matters of invention, production, and noisemaking. Pink Noises is a powerful testimony to the presence and vitality of women in electronic music cultures, and to the relevance of sound to feminist concerns. Interviewees: Maria Chavez, Beth Coleman (M. Singe), Antye Greie (AGF), Jeannie Hopper, Bevin Kelley (Blevin Blectum), Christina Kubisch, Le Tigre, Annea Lockwood, Giulia Loli (DJ Mutamassik), Rekha Malhotra (DJ Rekha), Riz Maslen (Neotropic), Kaffe Matthews, Susan Morabito, Ikue Mori, Pauline Oliveros, Pamela Z, Chantal Passamonte (Mira Calix), Maggi Payne, Eliane Radigue, Jessica Rylan, Carla Scaletti, Laetitia Sonami, Bev Stanton (Arthur Loves Plastic), Keiko Uenishi (o.blaat)

*The National Wildlife Research Center Publications List, 2000* Springer

This book is open access under a CC BY-NC 2.5 license. On April 22, 1915, the German military released 150 tons of chlorine gas at Ypres, Belgium. Carried by a long-awaited wind, the chlorine cloud passed within a few minutes through the British and French trenches, leaving behind at least 1,000 dead and 4,000 injured. This chemical attack, which amounted to the first use of a weapon of mass destruction, marks a turning point in world history. The preparation as well as the execution of the gas attack was orchestrated by Fritz Haber, the director of the Kaiser Wilhelm Institute for Physical Chemistry and Electrochemistry in Berlin-Dahlem. During World War I, Haber transformed his research institute into a center for the development of chemical weapons (and of the means of protection against them). Bretislav Friedrich and Martin Wolf (Fritz Haber Institute of the Max Planck Society, the successor institution of Haber's institute) together with Dieter Hoffmann, Jürgen Renn, and Florian Schmaltz (Max Planck Institute for the History of Science) organized an international symposium to commemorate the centenary of the infamous chemical attack. The symposium examined crucial facets of chemical warfare from the first research on and deployment of chemical weapons in WWI to the development and use of chemical warfare during the century hence. The focus was on scientific, ethical, legal, and political issues of chemical weapons research and deployment — including the issue of dual use — as well as the ongoing effort to control the possession of chemical weapons and to ultimately achieve their elimination. The volume consists of papers presented at the symposium and supplemented by additional articles that together cover key aspects of chemical warfare from 22 April 1915 until the summer of 2015.

**Evolution, Ecology, Conservation, and Management of Hawaiian Birds** New Haven : Yale University Press, 1967 [i.e. 1968]

The challenge of housing is increasingly recognised in international policy discussions in connection to the processes of migration, climate change, and economic globalisation. This book addresses the challenges of housing and emerging solutions along the lines of three major dynamics: migration, climate change, and neo-liberalism. It explores the outcomes of neo-liberal »enabling« ideas, responses to extreme climate events with different housing approaches, and how the dynamics of migration reshape the urban housing provision in a changing world. The aim is to contextualise the theoretical discourses by reflecting on the case study context of the eleven papers published in this book. With forewords by Raquel Rolnik (University Sao Paulo) and Mohammed El Sioufi (UN-Habitat).

*Pigs for the Ancestors* Columbia University Press

Provides the political and historical detail necessary to understand the motivations and probable outcomes of conflicts in the country. The volume explores relate human security issues, including the willingness of several Filipino armed groups to negotiate political settlements to the conflicts, and to contemplate the demobilization and reintegration of combatants into civilian life. Light is also shed on the use of small arms - the weapons of choice for armed groups - whose availability is maintained through leakage from government arsenals, porous borders, a thriving domestic craft industry, and a lax regulatory regime.

*The Morality of Law* Univ of California Press

This conference represents the first time in my life when I felt it was a misfor tune, rather than a major cause of my happiness, that I do conservation work in New Guinea. Yes, it is true that New Guinea is a fascinating microcosm, it has fascinating birds and people, and it has large expanses of undisturbed rainforest. In the course of my work there, helping the Indonesian government and World Wildlife Fund set up a comprehensive national park system, I have been able to study animals in areas without any human population. But New Guinea has one serious drawback: it has no primates, except for humans. Thus, I come to this conference on primate conservation as an underprivileged and emotionally deprived observer, rather than as an involved participant. Nevertheless, it is easy for anyone to become interested in primate conserva tion. The public cares about primates. More specifically, to state things more realistically, many people care some of the time about some primates. Primates are rivaled only by birds, pandas, and the big cats in their public appeal. For some other groups of animals, the best we can say is that few people care about them, infrequently. For most groups of animals, no one cares about them, ever.

*Handbook of Gynecology* World Bank Publications

Cars, Conduits and Kampongs offers a wide panorama of the modernization of Indonesian cities between 1920 and 1960. In examining the multiple responses to innovations introduced by Western colonialism, the contributors demonstrate how modernization, urbanization, and decolonization were intrinsically linked. A full text Open Access version will also become available.

**Crop Stress and its Management: Perspectives and Strategies** Cambridge University Press

This book presents the latest archaeological evidence that makes a case for Egypt as an early urban society. It traces the emergence of urban features during the Predynastic Period up to the disintegration of the powerful Middle Kingdom state (ca. 3500-1650 BC).

*Petroleum Source Rocks* Springer

Climate change is one of the major challenges of modern times. Its impacts are manifold and vary from sea level rise (especially relevant to those living in coastal areas), to the increased frequency of extreme events such as cyclones and storm surges, which not only poses problems to property and infrastructure, but also to human health. Climate change is also associated with damages to the physical and natural environment, as well as to biodiversity. According to the 5th Assessment Report produced by the Inter-Governmental Panel on Climate Change (IPCC), many geographical regions across the world are moderately or highly vulnerable to climate change, whose impacts may be further exacerbated by other human-induced pressures. The above state of affairs illustrates the need for a better and more holistic understanding of how climate change affects countries and regions on the one hand, but also on how the many problems it causes may be managed on the other, vis-a-vis a better ability to adapt. There is also a perceived need to showcase successful examples of how to duly address and manage the many social, economic and political problems posed by climate change around the world, in order to replicate and even upscale the successful ones. It is against this background that the Handbook of Climate Change Management has been produced. It contains papers prepared by scholars, social movements, practitioners and members of governmental agencies, undertaking research and/or executing climate change projects, and working with communities across all geographical regions. The Handbook focuses on "Research, Leadership, Transformation," meaning that it serves the purpose of showcasing the role these key areas play in respect of applied research, field projects and best practices to foster climate change adaptation worldwide.

**The Pancreas** The Morality of LawThe Mobility of Displaced Syrians

This book provides comprehensive and definitive coverage of the current understanding of the structure and function of the exocrine pancreas. While emphasis is on normal physiology, the relevant cell biological, developmental and biochemical information is also provided. Where appropriate, chapters also include material on functional changes in pancreatitis. All chapters are fully referenced and provide up to date information. The book has been overseen and published by the American Pancreatic Association with Fred S. Gorelick and John A. Williams as Editors. It includes 26 chapters written by an international group of authorities; completed chapters are also presented in open access format on the Pancreapedia ([www.pancreapedia.org](http://www.pancreapedia.org)). The book contains full-color images and summary diagrams that enhance readability and extend the detail provided in the text. The Pancreas: Biology and Physiology is divided into four sections: Pancreatic Exocrine Structure and Function Anatomy, Bioenergetics, Cytoskeleton, Intracellular Signaling Acinar Cells Digestive enzyme synthesis, intracellular transport, Zymogen granules, Exocytosis Exocrine Pancreas Integrative Responses Hormonal and Neural Control of Protein and Fluid Secretion, Molecular mechanisms of fluid and bicarbonate secretion, regulation of growth and regeneration Pancreatic Islet and Stellate Cell Structure and Function Structure and vasculature of islets, regulation of islet secretion, Stellate Cells in health and disease The book is designed to be a reference book for pancreas researchers but its clear and readable text will appeal to teachers, students and all individuals interested in the exocrine pancreas.

**The Curious Feminist** Department of the Army

With the entrance of the European Union into the field of International Investment Law and Arbitration, a new specialist field of law, namely 'European Investment Law and Arbitration' is in the making. This new field of law draws on EU Law, Public International Law, International Investment Law, International Arbitration Law and Practice and International Economic Law, while others fields of law such as Energy Law are also relevant. The European Investment Law and Arbitration Review is the first law periodical specifically dedicated to the field of 'European Investment Law and Arbitration'. The timing could not be better. The first EU integrated investment treaties with Canada (CETA), US (TTIP) and Singapore (EU-SING) are either negotiated or about to be signed and ratified by the EU and its Member States. These are "integrated" investment treaties in that they combine free trade agreement provisions with international investment agreement norms. Moreover, the Court of Justice of the EU (CJEU) is about to deliver its first judgments and Opinions directly relating to intra-EU BITs and the EU-SING FTA. More generally, the public debate and discussions within academic and practitioner circles about the pros and cons of investor-state dispute settlement (ISDS) and investment treaties in general is intensifying almost on a daily basis. The Review will cover all these issues, but also goes beyond that by offering space for more innovative approaches and themes.

*Emerging Contaminants from Industrial and Municipal Waste* Springer Science & Business Media

This book is a comprehensive, up-to-date reference on general and subspecialty gynecology. Covering all aspects of gynecology commonly encountered in day-to-day practice, this exhaustive and fully updated new edition provides a practical, one-stop reference work for clinicians working in the field. This carefully-designed volume includes ten sections, beginning with comprehensive coverage of office-based gynecology, and continuing on to present disease processes and management information by patient age group. Each chapter includes background information, current recommendations for screening, diagnostic criteria, common and uncommon associated problems, approach to diagnosis, summary of treatment options, and an overview of ICD-10 codes for specific diagnoses. Importantly, many areas that are covered in the handbook as subspecialty problems are pertinent and important information to many of the general practitioners who handle and develop some expertise in these areas. These include ovulation induction, medical management of incontinence, management of abnormal Pap smears, and work-up of abnormal bleeding. The handbook concludes with an easy-to-navigate presentation of minimally-invasive operations, surgical procedures, neoplasms, and pathology. Advantages and risks associated with management of particular diseases are covered, along with multiple tips for avoiding complications. This second edition is fully updated. With extensive updates on cervical cancer screening, pelvic organ prolapse, and more, many chapters will be completely rewritten to reflect

the latest guidelines, procedures, and methods of care in women's health. The text additionally includes two new chapters, covering the impact of COVID on gynecology care, and the work-up and surgical management of chronic pelvic pain. This is an ideal guide for practicing gynecologists, family and internal medicine physicians, physician assistants, nurse practitioners, fellows, residents, medical students, and all women's health care providers.

**Glaciation of the Puget Sound Region** Springer

In this collection of lively essays, Cynthia Enloe makes better sense of globalization and international politics by taking a deep and personal look into the daily realities in a range of women's lives. She proposes a distinctively feminist curiosity that begins with taking women seriously, especially during this era of unprecedented American influence. This means listening carefully, digging deep, challenging assumptions, and welcoming surprises. Listening to women in Asian sneaker factories, Enloe reveals, enables us to bring down to earth the often abstract discussions of the global economy. Paying close attention to Iraqi women's organizing efforts under military occupation exposes the false global promises made by officials. Enloe also turns the beam of her inquiry inward. In a series of four candid interviews and a new set of autobiographical pieces, she reflects on the gradual development of her own feminist curiosity. Describing her wartime suburban girlhood and her years at Berkeley, she maps the everyday obstacles placed on the path to feminist consciousness—and suggests how those obstacles can be identified and overcome. *The Curious Feminist* shows how taking women seriously also challenges the common assumption that masculinities are trivial factors in today's international affairs. Enloe explores the workings of masculinity inside organizations as diverse as the American military, a Serbian militia, the UN, and Oxfam. A feminist curiosity finds all women worth thinking about, Enloe claims. She suggests that we pay thoughtful attention to women who appear complicit in violence or in the oppression of others, or too cozily wrapped up in their relative privilege to inspire praise or compassion. Enloe's vitality, passion, and incisive wit illuminate each essay. *The Curious Feminist* is an original and timely invitation to look at global politics in an entirely different way.

*The Archaeology of Urbanism in Ancient Egypt* Springer Science & Business Media

This book focuses on innovative treatment technologies for the elimination of emerging contaminants in wastewater and drinking water treatment processes. The book also discusses sources and occurrence of emerging contaminants in municipal and industrial waste, giving an overview of state-of-the-art analytical methods for their identification. Further important aspects covered include the acute and chronic effects and overall impact of emerging contaminants on the environment.
