Amygdala Hijack - The Waening (Part 1 of 3), Episodes 1 - 9 [eBook: #Dystopian, #Apocalyptic, #GeneticEngineering] _____ A golden obelisk crash lands on a Saskatchewan farm and warns of an impending alien invasion. Searching for silver linings, science podcaster Peter Scott and his small team use this ominous event to improve their sagging ratings. They capitalize on growing fears of invasion by interviewing experts with unorthodox solutions to defend Earth. But 2037 is no ordinary year. DNA is just another programming language, and CRISPR-centric body-altering tech is now a plaything for the masses. Humans are hybridizing at breakneck speed, sporting subdermal chips, animal traits, and flesh-metal integrations. While radical new tech spins off the rails, society convulses violently at the pace of change as biases and hatreds escalate between humans and hybrids. Conservatives vs. Progressives; Majorities vs. Minorities; Humans vs. Hybrids, and now Humanity vs. Aliens...where will it all end? Yet alien marauders and social

disruptions aren't the only challenges. Shadowy forces are threatening to kill the podcast - or the team. Is there any hope of escaping their dire predicament? 5 Stars***** Imminent Future, or Imminent Extinction? A fascinating leap into the imminent future...when Genetic Engineering and Genetic Modification have advanced astronomically (Goodreads Review). <https://bladecort.com> PREDICTABLE PATHS episodes, in sequential order: 1. The purpose of this book is to interpret more sensitively some of the offerings of the standard text book of general chemistry. As a supplement thereto, it covers various aspects of formulation and stoichiometry that are frequently treated far too perfunctorily or, in many instances, are not considered at all. The inadequate attention often accorded by the comprehensive text to many topics within its proper purview arises, understandably enough, from the numerous broad and highly varied objectives set for the first year of the curriculum for modern chemistry in colleges and universities. For the serious student this means, more often than not, the frustrations of questions unanswered. The amplification that this book proffers in the immediate area of its subject covers the equations representing internal redox reactions, not only of the simple but, also, of the multiple disproportionations of which the complexities often discourage an undertaking despite the challenge they offer: distinctions to be observed in the balancing of equations in contrasting alkali-basic and ammonia-basic reaction media; quantitative contributions made by the ionization or dissociation effects of electrolytes to the colligative properties of their solutions; intensive application of the universal reaction principle of chemical equivalence to the stoichiometry of oxidation and reduction.
