Clinical Decision Making for the Physical Therapist Assistant Lippincott Williams & Wilkins

When a child has a health problem, parents want answers. But when a child has cerebral palsy, the answers don't come quickly. A diagnosis of this complex group of chronic conditions affecting movement and coordination is difficult to make and is typically delayed until the child is eighteen months old. Although the condition may be mild or severe, even general predictions about long-term prognosis seldom come before the child's second birthday. Written by a team of experts associated with the Cerebral Palsy Program at the Alfred I. duPont Hospital for Children, this authoritative resource provides parents and families with vital information that can help them cope with uncertainty. Thoroughly updated and revised to incorporate the latest medical advances, the second edition is a comprehensive guide to cerebral palsy. The book is organized into three parts. In the first, the authors describe specific patterns of involvement (hemiplegia, diplegia, quadriplegia), explain the medical and psychosocial implications of these conditions, and tell parents how to be effective advocates for their child. In the second part, the authors provide a wealth of practical advice about caregiving from nutrition to mobility. Part three features an extensive alphabetically arranged encyclopedia that defines and describes medical terms and diagnoses, medical and surgical procedures, and orthopedic and other assistive devices. Also included are lists of resources and recommended reading.

Therapeutic Exercise for Children With Developmental Disabilities has been expanded and updated to include everything a student or professional needs to know when working with children with developmental disabilities. Continuing the emphasis on evidence-based practice from the previous editions, this comprehensive Fourth Edition enhances critical thinking and evaluation skills. Throughout the course of the text, Drs. Barbara H. Connolly and Patricia C. Montgomery present case studies of 5 children with various developmental disabilities to bring a problem-solving approach to each individual chapter topic. The case studies include 2 two children with cerebral palsy (GMFCS Levels I and V), a child with myelomeningocele, a child with Down syndrome, and a child with developmental coordination disorder and attention-deficit hyperactivity disorder. Each chapter's examination, evaluation, and intervention recommendations are accompanied by specific treatment objectives and therapeutic activities, plus a companion website with 17 videos, which contains 90 minutes of content to illustrate concepts. Recent research and clinical recommendations, as well as related references, are also provided in each chapter. This Fourth Edition utilizes the American Physical Therapy Association's Guide to Physical Therapist Practice 3.0 and the World Health Organization's International Classification of Functioning, Disability, and Health--Children and Youth as its framework. The focus of the chapters is on children's participation and empowerment, rather than body function and structure. Currently in the United States, 20% of children ages 6 years or younger live in poverty. Poor children have fewer opportunities than their peers to resources that are important for child development. At the same time, the prevalence of developmental disabilities has increased to 1 in every 6 children. Early identification of developmental delays is critical, and more than half of all American parents do not know the warning signs.

Occupational therapy professionals in early intervention and preschool practice can provide the necessary services to support children's health in early childhood. This Practice Guideline explains the occupational therapy process for young children--and their families, caregivers, and teachers--which includes evaluation, intervention, and outcomes planning to enhance a child's occupational performance, adaptation, health and wellness, community participation, role competence, and self-advocacy. Topics include social-emotional development; feeding, eating, and swallowing; cognitive and motor development; service delivery; autism; obesity, cerebral palsy; and parent training. This work can help occupational therapy practitioners, as well as those who manage, reimburse, or set policy regarding occupational therapy services, understand the contribution of occupational therapy in evaluating and serving young children. This guideline can also serve as a resource for parents, school administrators, educators, and other early childhood staff.

Learning disabilities are among the most common disabilities experienced in childhood and adulthood. Although identifying learning disabilities in a school setting is a complex process, it is particularly challenging in low- and middle-income countries that lack the appropriate resources, tools, and supports. This guide provides an introduction to learning disabilities and describes the processes and practices that are necessary for the identification process. It also describes a phased approach that countries can use to assess their current screening and evaluation services, as well as determine the steps needed to develop, strengthen, and build systems that support students with learning disabilities. This guide also provides intervention recommendations that teachers and school administrators can implement at each phase of system development. Although this guide primarily addresses learning disabilities, the practices, processes, and systems described may be also used to improve the identification of other disabilities commonly encountered in schools.
