## ROBERTSON CANTU

### The History of Ten Years, 1830-1840 Peter Lang

This book examines the ways in which our ideas about language and identity which used to be framed in national and political terms as a matter of rights and citizenship are increasingly recast in economic terms as a matter of added value. It argues that this discursive shift is connected to specific characteristics of the globalized new economy in what can be thought of as "late capitalism". Through ten ethnographic case studies, it demonstrates the complex ways in which older nationalist ideologies which invest language with value as a source of pride get bound up with newer neoliberal ideologies which invest language with value as a source of profit. The complex interaction between these modes of mobilizing linguistic resources challenges some of our ideas about globalization, hinting that we are in a period of intensification of modernity, in which the limits of the nation-State are stretched, but not (yet) undone. At the same time, this book argues, this intensification also calls into question modernist ways of looking at language and identity, requiring a more serious engagement with capitalism and how it constitutes symbolic (including linguistic) as well as material markets.

SYNOPSIS As L. Ron Hubbard describes in this book, life is composed of seven-tenths work, one-tenth familial, one-tenth political and one-tenth relaxation. Here, then, is Scientology applied to that seven-tenths of existence including the answers to Exhaustion and the Secret of Efficiency. Here, too, is the analysis of life itself—a game composed of exact rules. Know them and you succeed. The Problems of Work contains technology no one can live without, and that can immediately be applied by anyone in the workaday world. FULL DESCRIPTION Life is composed of seven-tenths work, one-tenth familial, one-tenth political and one-tenth relaxation. Here, then, is Scientology applied to that crucial seven-tenths of existence. The Problems of Work contains the senior principles and laws which apply to every endeavor, every problem of work. For they are the discoveries which lay bare the core of these problems and explain the very fabric of life itself. The breakthroughs detailed here include: The Anatomy of Confusion—and its cure The Doctrine of the Stable Datum—the most fundamental law of work, and living The Anatomy of Control—and how to turn “bad control” to good The Anatomy of Life as a Game—and the rules by which it is played The “Secret” of Efficiency The most fundamental elements of life—Affinity, Reality and Communication And, the rock bottom cause of Exhaustion, with the powerful Scientology processes that return the energy of youth Here, then, is not only technology to bring stability to the workplace, but the magic processes to return joy itself to all of life. For this is Scientology.

Rosalía de Castro (1837-1885) is considered the founder of modern Galician literature. She wrote three major books of poetry: two in Galician, Galician Songs and New Leaves, and one in Spanish, On the Banks of the Sar. Nourished by the popular songs the author heard around her, Galician Songs was first published in 1863 and dedicated on 17 May, the date that a hundred years later, in 1963, would become and has remained Galician Literature Day, when the work of a particular Galician author is celebrated. Galician Songs marks the first full publication of any of Rosalía de Castro's books of poetry in English and is accompanied by a translator's introduction that argues for the importance and contemporaneity of the author's work and poetics, not just in Galician, but in English.

In the late '60s, Julián Ríos began work on what would have been his very first novel, but fearing that it wouldn't pass the stringent Spanish censorship under Franco, decided not to submit the completed

book to publishers. Soon distracted by what would be his magnum opus—the Larva series—the manuscript was set aside and forgotten, until the author found and dusted it off almost fifty years later. Quite unlike his later postmodernist work, the short and bitter Procession of Shadows is filled with stories of love, war, and vengeance, focusing on the tiny, remote village of Tamoga—a place where vendettas are passed down from generation to generation, and where violence has left its traces in every corner. A Winesburg, Ohio for the end times, Procession of Shadows shows us a very different side of the usually playful Ríos: dark, direct, and pitiless.

This is an extensively revised edition of W. V. Quine's introduction to abstract set theory and to various axiomatic systematizations of the subject. The treatment of ordinal numbers has been strengthened and much simplified, especially in the theory of transfinite recursions, by adding an axiom and reworking the proofs. Infinite cardinals are treated anew in clearer and fuller terms than before. Improvements have been made all through the book; in various instances a proof has been shortened, a theorem strengthened, a space-saving lemma inserted, an obscurity clarified, an error corrected, a historical omission supplied, or a new event noted.

This book employs the image of “shrapnel,” bits of scattered metal that can hit purposeful targets or unwitting bystanders, to narrate the story of workplace power and gender discrimination. The project interweaves stories of gender shrapnel with an examination of national rhetoric surrounding business, education, and law to uncover underlying phenomena that contribute to discourse on privilege and gender in the academic workplace. Using concrete examples that serve as case studies for subsequent discussion of data about women in the workforce, language use and misuse, sexual harassment, silence and shutting up, and hiring, training, promotion, and the glass ceiling, Mayock explores the deeper implications of gender inequity in the workplace.

Wetlands are complex and dynamic ecological systems incorporating two important, inter-linked components: hydrology and vegetation. Modelling wetland components and processes reveals the nature of wetland systems and helps to predict the effects of environmental change. The main goal of much current research is the construction of a vigorous and spatially-explicit model which describes the dynamics of wetland vegetation in relation to environmental variables, including hydrological regimes, sediment type and nutrient availability. Knowledge about ecological functions, environmental services and societal values associated with wetlands has increased rapidly. How to turn this knowledge into practical benefits for sustainable and integrated wetland management is a key question. Individual chapters address the ethics and sociology of wetlands, and the ecology, ecohydrology and conservation practice of a variety of landscapes and countries. It will be useful to students, teachers and scientists involved in wetland research and informative for the staff of

governmental bodies and other organizations engaged in wetland management.

Every day trillions of dollars circulate the globe in a digital data space and new forms of property and ownership emerge. Massive corporate entities with a global reach are formed and disappear with breathtaking speed, making and breaking personal fortunes the size of which defy imagination. Fictitious commodities abound. The genomes of entire nations have become corporately owned.

Relationships have become the overt basis of economic wealth and political power. Hypercapitalism explores the problems of understanding this emergent form of global political economic organization by focusing on the internal relations between language, new media networks, and social perceptions of value. Taking an historical approach informed by Marx, Phil Graham draws upon writings in political economy, media studies, sociolinguistics, anthropology, and critical social science to understand the development, roots, and trajectory of the global system in which every possible aspect of human existence, including imagined futures, has become a commodity form.

From Angola, a country riddled with civil war and its aftereffects for the last 30 years, comes a surprising story of hope, passion, and magical realism from a groundbreaking, young African novelist. A young man arrives at the church of a small African village and starts whistling so beautifully that the priest is left in tears. As his weeklong stay continues, the whistler finds himself affected by the colorful inhabitants of the village as they all become bewitched and surrender to the moods of his melodies.

An "intriguing and invaluable" biography of Alexander the Great by the novelist whose fiction redefined Ancient Greece (The New York Times). Acclaimed writer Mary Renault is widely known for her provocative historical novels of Alexander the Great and his lovers. But she also authored this nonfiction classic, a fresh, illuminating look at a man whose legend has remained larger than life for more than two thousand years. From his dysfunctional family dynamics to his molding under Aristotle, from his shocking rise to power at age twenty to the staggering violence of his military campaigns, Renault is clear-eyed about Alexander's accomplishments and his flaws. Infectious in its enthusiasm, this is a penetrating study of an unrivaled conqueror, enduring icon, and fascinating man. Hailed as both "a splendid achievement in nonfiction" (The Plain Dealer) and "the perfect companion to her Alexander novels" (The Wall Street Journal), Renault's engrossing and accessible biography stands alone in the pantheon of Alexander the Great literature. This ebook features an illustrated biography of Mary Renault including rare images of the author.

Although semiotics has, in one guise or another, flourished uninterruptedly since pre Socratic times in the West, and important semiotic themes have emerged and developed independently in both the Brahmanic and Buddhist traditions, semiotics as an organized undertaking began to take form only in the 1960s. Workshops materialized, with a perhaps surprising spontaneity, over much of Europe—Eastern and Western and in North America. Thereafter, others quickly surfaced almost everywhere over the literate globe. Different places strategically allied themselves with different legacies, but all had a common thrust: to aim at a general theory of signs, by way of a description of different sign systems, their comparative analysis, and their classification. More or less permanent confederations were forged with the most diverse academic disciplines, and amazingly varied frameworks were devised-suited to the needs of the times and the sites-to carry the work of consolidation forward. Bit by bit, mutually supportive international networks were put together. Today, it can truly be asserted that semiotics has become a global enterprise. This, of course, is far from saying that the map is uniform or even that world-wide homogeneity is in the least desirable. While our conjoint ultimate goal remains steadily in focus, the multiplicity of avenues available for its realization is inherent in the adventure of the search itself.
