National Opticianry Certification Exam Basic Certification-ABO Elsevier Health Sciences

Intraocular inflammation is particularly difficult to diagnose and treat, often resembling a complex puzzle of patient history, symptoms, imaging, and laboratory test results. *Clinical Cases in Uveitis: Differential Diagnosis and Management* is a unique, case-based resource designed to help you navigate the range of challenging manifestations and presentations that often mimic other diseases. More than 90 real-world uveitis cases are presented in a highly templated, easy-to-follow format, along with step-by-step guidance on the right patient

questions, assessment, differential diagnosis, testing, management, and follow-up care. Provides a variety of patient presentations and scenarios and unique clinical situations that mirror day-to-day practice. Covers current diagnostic imaging modalities, including optical coherence tomography (OCT), optical coherence tomography angiography, fluorescein angiography (FA), and indocyanine green angiography (ICG). Features diagnostic and management algorithms that assist in differential diagnosis and decision making for even the most complex cases, including those in which the patient does not improve as expected, prompting a reassessment of diagnosis and management. Contains approximately 250 high-quality images, including color anterior segment photographs, color fundus photographs,

OCT images, and angiograms. Discusses distinguishing infectious from non-infectious inflammation; when and how to start systemic immunosuppressive therapy; diagnostic criteria and management of "white dot syndromes"; pediatric uveitis; masquerade syndromes, including inherited retinal degenerations, malignancies, and paraneoplastic syndromes; and much more. Includes the authors' specific thought processes and approach in particularly challenging cases. An excellent resource and study tool for ophthalmology residents and fellows, those studying for oral boards, general ophthalmologists, retina specialists, and more.

Borish's Clinical Refraction - E-Book
Elsevier Health Sciences

Even with the advances in intraocular lens technology and the growing diversity of refractive surgery techniques, the role of contact lenses in ophthalmic practice has only increased. This is due in part to the great strides in materials, technology, expanding applications (both refractive and therapeutic) for contact lenses, and the clear recognition that contact lenses will always be an important tool for the ophthalmologist. With the fitting of contact lenses as a medical art, requiring a thorough understanding of anatomy, physiology and optics of the eye, this practice is formulaic only in part. The rest of contact lens practice requires sound medical judgment and decision-making

that comes only with "hands-on" experience. The authors address this need by starting with a didactic approach that incorporates frequently-asked questions and straightforward answers so that the ophthalmology resident, intermediate contact lens practitioner, and optometrist will find this to be an indispensable resource.

OphthoBook Mometrix Media LLC MCQs for FRCOphth Part 2 is a key resource for candidates preparing to sit the Royal College of Ophthalmologists examination. Written by experts in the field, it is carefully mapped to the RCOphth curriculum, providing comprehensive preparation for all aspects of this challenging exam. Written for the new FRCOphth format, it contains 360 questions organised into five sections to reflect the subdivisions of the exam. A mock examination of 90 questions enables trainees to assess their level of knowledge, and practise the technique and approach needed for the examination. In addition to a small ratio of illustration based questions to reflect the real FRCOphth exam it also places an emphasis on areas that are not well covered in other materials, such as GMC and RCOphth guidelines. All answers are accompanied by detailed explanations and relevant further reading sources, providing candidates with high-quality self-assessment. Offering a true test of the reader's ophthalmology knowledge, this is a must-buy for anyone preparing for the FRCOphth part 2 written exam.

This book provides a summary of the various aspects of corneal transplantation — the clinical, experimental (including multimedia display of the surgical techniques), immunological, therapeutic and prosthetic components — in one volume. The interested specialist in one field can thus have access to information from the other fields and develop a broad concept of the challenges to be faced in achieving the ultimate goal, i.e. an optically clear, visually satisfactory, functioning corneal graft which is tolerated in the long term without the need for systemic immunosuppression. A second purpose of the book is to provide information regarding current immunological concepts of the process of corneal graft rejection. In particular, recent work in the fields of innate versus adaptive immunity, novel therapeutics and corneal xenografts is presented. Contents: A Brief History of Corneal Transplantation Surgery of Corneal Graft in Humans The Clinical Problem Eye Banking MHC Antigens, Tissue Typing and Blood Group Matching in Corneal Transplantation The Alloresponse to Corneal Graft The Xenoreponse to Corneal Graft Animal Models of Corneal Graft Pathology of Human Corneal Transplantation Therapeutic Approach to Experimental Corneal Graft Rejection Immunosuppression for Human Corneal Graft Rejection Transmission of Disease Through Corneal Transplantation Artificial Corneas Readership: Researchers and practitioners in ophthalmology, optometry, immunology, transplantation and surgery.
