Sheaf Theory is modern, active field of mathematics at the intersection of algebraic topology, algebraic geometry and partial differential equations. This volume offers a comprehensive and self-contained treatment of Sheaf Theory from the basis up, with emphasis on the microlocal point of view. From the reviews: "Clearly and precisely written, and contains many interesting ideas: it describes a whole, largely new branch of mathematics." -Bulletin of the L.M.S.

Aid Activities in Africa provides detailed information on individual commitments, i.e. intended disbursements, of Official Development Assistance (ODA) to African countries for the year 2002. This yearly publication records the commitments reported by members of the OECD Development Assistance Committee (DAC) and by multilateral institutions to the CRS Aid Activity database (Creditor Reporting System). Data presented are unique, comparable and consistent with definitions and methodologies of the DAC statistics. The information is designed for use by development agencies and institutions in terms of programming and analysis by country and by sector. For each developing country, activities are ordered by sector and by donor. DAC STATISTICS: ALSO AVAILABLE ON INTERNET AND ON CD-ROM The data are taken from the CRS database which is regularly updated and contains records from 1973 onwards. Data are available on the International Development Statistics Online on

the DAC website at the following address:

[www.oecd.org/dac/stats](http://www.oecd.org/dac/stats), and on the yearly CD-ROM International Development Statistics. Selected development databases are also available on line via [www.SourceOECD.org](http://www.SourceOECD.org).

The Congress hosted 611 registered participants from 38 countries. Its aim was to be an international forum for scholars and demands of Near Eastern Archaeology. From the four sections of the Congress, Vol. I: 1) The Reconstruction of Environment. Natural Resources and Human Interrelation through

Time, 2) Visual Communication, [Vol. II: 3) Social and Cultural Transformation: The Archaeology of Transitional Periods and Dark Ages, 4) Archaeological Field Reports (Excavations, Surveys, Conservation) ISBN 978344705757-8]. Together these volumes unite 77 contributions on about 1100 pages. They are arranged according to the sections. The rst three will be introduced by the key lectures which were given by Tony Wilkinson, Winfried Orthmann, and Roger Matthews. The resumes of these sections were provided by Wendy Matthews, Dominik Bonatz, and Diederik J.W. Meijer. The contributions cover many aspects of the main themes through time, from the Neolithic to the Hellenistic / Roman period, and offer interdisciplinary approaches to complex archaeological problems.

 Strain Patterns in Rocks is a selection of papers presented at the international workshop, held in Rennes on May 13-14, 1982. The book presents papers on the techniques of strain measurement; an orthographic analysis of deformation; and the applications of

the Mohr circle to inhomogeneous deformation. The text also includes papers on the methods of strain removal; a general transformation to simulate heterogeneous strain states; the significance of isotropic points; and the detection of volume changes. Papers on the analyses of strain discontinuity at interfaces; strain refraction through contrasting layers; and strain patterns in ductile shear zones and at the tips to shear and thrust zones are also considered. The book further includes papers on the natural strain patterns: in mylonite zones, in granites, in

Alpine nappes, in linearly anisotropic rocks, in an ice cap and in a boudin model.
