 This book addresses issues confronting universities' attempts to integrate practice-based learning in higher education curriculum, yet which reveals the jostling of cultures which exist within and

amongst the academy, industry, government and professional bodies and other educational providers. The book engages theory in practices, and draws upon research highlighting the issues and transactions that emerge with implementation of work integrated learning arrangements as uses these resources to discuss and develop further both theoretical premises and procedural contributions. The illustrative cases derive utilise metaphors of culture in their exploration of the epistemologies, structures, politics, histories and rituals which constrain program opportunity and success in making these advances. The volume comprises two main sections, the first laying out focal issues in the integration of learning and work in higher education. This section presents the issues at multiple levels of analysis and in theoretical terms. This section provides a foundation for the second section of the book which introduces a number of research studies illustrative of the issues theorised in the first. The cases highlight the practice of workplace and higher education pedagogy. They provide thick descriptions of experiences of integration and are explicitly focused on the implementation of work integrated programs in higher education. The volume commences with an introductory chapter which sets out the range of issues addressed both theoretically and through illustration in the book and a final chapter critically reviews the contributions and acts to provide a cohesive picture of the learning practices of work and higher education and the possibilities of their integration.

 To fully understand not only the past, but also the trajectories, of human societies, we need a more dynamic view of human social systems. Agent-based modeling (ABM), which can create fine-scale models of behavior over time and space, may reveal important, general patterns of human activity. Agent-Based Modeling for Archaeology is the first ABM textbook designed for researchers studying the human past. Appropriate for scholars from archaeology, the digital humanities, and other social sciences, this book offers novices and more experienced ABM

researchers a modular approach to learning ABM and using it effectively. Readers will find the necessary background, discussion of modeling techniques and traps, references, and algorithms to use ABM in their own work. They will also find engaging examples of how other scholars have applied ABM, ranging from the study of the intercontinental migration pathways of early hominins, to the weather-crop-population cycles of the American Southwest, to the trade networks of Ancient Rome. This textbook provides the foundations needed to simulate the complexity of past human societies, offering researchers a richer understanding of the past—and likely future—of our species.

There has been growing interest in recent years in the influence of tests on teaching and learning - a phenomenon commonly referred to as 'washback'. Despite persistent assertions about its nature and scope, empirical studies investigating test washback are still limited in number, and few of these make use of both qualitative and quantitative methods in washback research. This volume presents a study of how the introduction of the 1996 Hong Kong Certificate of Education in English - a high stakes public examination - impacted on classroom teaching and learning in Hong Kong secondary schools. The washback effect was observed initially at the larger 'macro' level, among different stakeholder groups within the Hong Kong educational context; and also at the more local 'micro' level, in terms of teachers' attitudes, teaching content and classroom interactions. This study: provides a theoretical background to the washback concept, discusses the need for empirical investigation of washback, describes the use of a mixed methodology approach in washback research, offers insights into the role of tests as agents of innovation and change in the classroom and broader educational context. This volume will be of particular relevance to language test developers and researchers interested in the consequential validity of tests; it will also be of interest to teachers, curriculum designers, policymakers and others in

education concerned with the interface between language testing and teaching practices/programs. Book jacket.

Traditionally, management theories have taken a psychological approach to leadership, often assuming that it is a personality trait located within an individual. In contrast, the discursive approach to leadership, which is the focus of this book, assumes that leadership is created through communication practices. As a leader, this book will provide you with an in-depth look at an emerging approach to the study of business leadership that focuses on language as a vehicle for communicating leadership. The authors explore a new definition of leadership as the expression of ideas in talk or in action that are recognized by others as capable of progressing tasks or solving problems. The practical implication of this view of leadership suggests that leaders must constantly enact and communicate their relationship to their followers in such a way as to be recognized by them as a leader. Inside, you and future leaders will learn how to approach leadership more effectively as a communication practice that involves and depends upon the response of potential followers.
