Internationally, the

mechanized excavation of tunnels has intensified in the last two decades, as the number of tunnels being constructed for subways and railway underpasses increases. The subject of mechanized tunnelling in urban areas has not previously received the attention that it deserves, despite there being specific hazards associated with the construction of tunnels in metropolitan areas, including poor ground conditions, water tables higher than the level of

tunnels, and subsidence leading to damage to the existing structures on the surface. The application of technologies for achieving the stability of the tunnel and for minimizing surface settlement is described in this book. Accurate characterization of the ground; rigorous assessment and management of risk from design to maintenance; the correct choice of a tunnel boring machine and a plan for the advancement of the tunnel; specific excavation procedures

and real-time monitoring of excavation parameters are all discussed in this thorough work.

Current Housing Reports: American Housing Survey for the New York-Nassau-Suffolk-Orange Metropolitan Area 1999

This book deals with structural surveys for all types of building - domestic industrial and commercial - and includes diagnosis of a wide range of defects. It considers both modern and older construction methods, and deals with

the particular problems of alterations and restoration work. Guidance is given on how to carry out measured surveys and on report writing. The third edition covers the latest definitions of types of property surveys, more information on report writing and a range of detail updates. * Covers all types of building - commercial, industrial and historical - not just domestic * Deals with particular problems of conversion and renovation work - increasingly

important today * New edition features latest definitions of survey types, more on report writing and a range of other updates * 'a valuable reference book' - ASI Journal *Proceedings of the ... Annual General Meeting/conference* RILEM Publications This new edition examines management of built heritage through the use of values-led decision making, based on an understanding of the significance of the cultural asset. It considers how

significance is assessed and used as an effective focus and driver for management strategies and processes. The authors consider key policies and procedures that need to be implemented to help ensure effective management. The book will be useful for specialists in built heritage - conservation officers, heritage managers, architects, planners, engineers and surveyors - as well as for facilities and estates managers whose building

stock includes protected or designated structures or buildings in conservation or other historic areas. describes management strategies and tools for a wide range of built heritage assets a reflective and informative guide on current conservation management explains how understanding and using conservation values (significance) is essential to the protection of the built heritage uses real-life examples to draw out best practice

Condition surveys are becoming increasingly important and standardised in approach but are a high risk service with the potential for legal consequences if mistakes are made. Professionals therefore require clear, up-to-date advice on how to inspect and report accurately and this book provides a one-stop shop of uniquely practical, concise and accessible guidance written by one

of the leading authorities in the field. The key coverage includes: Domestic and commercial surveys; surveys for historic, new and dilapidated buildings Improvements to surveys including the inclusion of colour photographs, condition ratings, use of the term 'technical due diligence' and increased professionalization New techniques for further investigation including thermography, endoscopy and ground radar Advances in the diagnosis of causes of masonry

cracking New hazards such as Japanese Knotweed Updated to reflect the latest RICS regulations, legislation and guidance on building surveying Case studies of both bad and good practice and images to illustrate real world problems and solutions

 The updated edition of the authoritative and comprehensive guide to construction practice The

revised fourth edition of Barry's Advanced Construction of Buildings expands on the resource that has become a standard text on the construction of buildings. The fourth edition covers the construction of larger-scale buildings (primarily residential, commercial and industrial) constructed with load bearing frames in timber, concrete and steel; supported by chapters on offsite construction, piling, envelopes to framed buildings, fit-out and second fix, lifts and

escalators, building pathology, upgrading and demolition. The author covers the functional and performance requirements of the main building elements as well as building efficiency and information on meeting the challenges of limiting the environmental impact of buildings. Each chapter includes new "at a glance" summaries that introduce the basic material giving a good understanding of the main points quickly and easily. The text is fully up to date with the latest building regulations and

construction technology. This important resource: Covers design, technology, offsite construction, site assembly and environmental issues of larger-scale buildings including primarily residential, commercial and industrial buildings constructed with load bearing frames Highlights the concept of building efficiency, with better integration of the topics throughout the text Offers new "at a glance" summaries at the beginning of each chapter

Is a companion to Barry's Introduction to Construction of Buildings, fourth edition Written for undergraduate students and those working towards similar NQF level 5 and 6 qualifications in building and construction, Barry's Advanced Construction of Buildings is a practical and highly illustrated guide to construction practice. It covers the materials and technologies involved in constructing larger scale buildings.

Despite growing international awareness of the presence and significance of ruined buildings and archaeological sites, and the increasingly sophisticated technology available for the collection of data about them, these sites continue to be at risk across the globe.
Conservation of Ruins defines and describes these risks, which range from neglect, to destructive archaeology,

and even well-meaning intervention in the name of tourism. The book provides detailed, practical instruction on the conservation and stabilisation of ruins by structural and non-structural means, as well as describing the procedures and conditions that need to be in place to ensure the protection of our important historic sites. In considering aspects of architectural conservation, archaeology and ecology together for the first time, this book provides an integrated,

holistic view of this international topic that will be essential reading for those working in this field
