The one reference devoted exclusively to ASTs, this book assembles the most critical information on the subject in a single convenient volume. The result is an ideal tool for chemical, environmental, and civil engineers, as well as management and government personnel and others concerned with the regulatory issues governing ASTs. Section by section, this complete reference thoroughly examines and clarifies various types of storage media and their applications;

fundamental environmental engineering concerns; industrial codes and standards for ASTs; AST design considerations; the proper construction, fabrication, and erection of tanks; and the often-confusing requirements designed to keep ASTs environmentally sound.

Oil leaks from aboveground tanks have contaminated soil and water, threatening human health and wildlife. To prevent damage from oil spills, the Environmental Protection Agency (EPA) issued the Spill Prevention, Control, and Countermeasure (SPCC) rule in 1973. EPA's 10 regions inspect oil storage facilities to ensure compliance with the rule. EPA estimates that about 571,000 facilities are subject to this rule. Some states also regulate oil storage tanks. This report determines: (1) how EPA regions implement the SPCC program; (2) the data EPA has to implement and evaluate the program; and (3) whether some states' tank programs suggest ways for EPA to improve its program. Includes recommendations. Illustrations.

Pursuant to a congressional request, GAO reviewed the Environmental Protection Agency's (EPA) actions to address weaknesses in the regulation and inspection of aboveground oil storage tanks (AST), and provided information on the age, size, and other characteristics of AST. GAO found that: (1) EPA has not fully implemented any of its seven recommendations to improve the safety of aboveground oil storage tanks; (2) EPA has only partially implemented the recommendations because it gave higher priority to implementing new legislative requirements and had difficulty obtaining Office of Management and Budget approval to collect data for a national inventory of regulated facilities; (3) EPA has partially implemented one of three recommendations to strengthen its regulations governing storage tank construction; (4) proposed regulations emphasize, but do not require, that tank construction comply with certain standards and recommend that tanks be periodically tested; (5) EPA has required the facilities that pose the greatest environmental risk to develop response plans to minimize damages from spilled oil, but it has no plans to extend the

requirement to other facilities; and (6) EPA expects to implement three recommendations on improving inspection procedures and documentation, training inspectors, and establishing penalties for noncompliance by 1996, but it does not know when the fourth recommendation on targeting inspections will be implemented.

Excerpt from *Safe Aboveground Storage Tanks: Hearing Before the Subcommittee on Transportation and Hazardous Materials of the Committee on Energy and Commerce, House of Representatives, One Hundred Third Congress, Second Session; September 14, 1994* Obviously, many tank owners are choosing not to follow the American Petroleum Institute standards. And whether you have a large tank or a small tank, a marketing tank, a refinery tank, there is a possibility that there will be a leak. It only makes sense that the tank owners prevent those leaks before they occur. Senator Robb is the chief Sponsor of the bill in the Senate. The gao will be reporting to the Congress on the number and types of aboveground storage tanks across the country. While the epa is working to ascertain this information, it is important that we im mediately find answers to these questions and develop policies to prevent these damaging leaks into the environment. So, in summary, there is no question that aboveground tank leaks are clearly pervasive across the country, and they are ongoing as we speak. I am anxious to work with the committee and the epa and the regulated industries to address the current deficiencies in Federal law and, hopefully, to use hr. 1360 to fill some Of these gaps. And so, in so doing, Congress can address one of the last remaining loopholes in Federal environmental law.
