In The Closing of the Auditor's Mind?, author David J. O'Regan describes internal auditing as an important "binding agent" of social cohesion, for the accountability of individuals and organizations and also at aggregated levels of social trust. However, O'Regan also reveals that internal auditing faces two severe challenges – an external challenge of adaptation and an internal challenge of fundamental reform. The adaptation challenge arises from ongoing, paradigmatic shifts in accountability and social trust. The command- and- control, vertical hierarchies of traditional bureaucracies are being replaced in importance by networked, flattened patterns of accountability. The most challenging assurance demands of the modern era are increasingly located in three institutional domains – in the inner workings of organizations; in intermediary spaces at organizational boundaries; and in extra-mural locations. Internal auditing continues to cling, barnacle- like, to the inner workings of traditional, bureaucratic structures, and it has little to offer the emerging assurance demands on or beyond institutional boundaries. The reform challenge arises from internal auditing's prevailing tendency toward a rigid, algorithmic, checklist mindset that suppresses practitioners' creativity and critical thinking. This trend is increasingly narrowing internal auditing's intellectual and moral horizons. Under the pressures of these challenges, internal auditing is struggling to fulfil its

primary purpose of serving the public interest. O'Regan's powerful book focuses on: The redistribution of social trust from traditional, hierarchical institutions to diffuse, horizontally distributed networks The perennial validity of the classical virtues as the humane foundation of professional activity The role of creative expertise in promoting professional wisdom The Closing of the Auditor's Mind? is a philosophical audit of a profession on the threshold of crisis. The book presupposes no prior knowledge of philosophy, nor indeed of auditing. Philosophical technicalities are contained in an Appendix, leaving the main text jargon-free. O'Regan provides original and striking perspectives on the malaise of modern internal auditing, and he proposes radical remedies. This captivating and well-informed book is a must-read for all who are concerned with our collective socio-economic and political well-being.

Boards and business leaders expect their key advisors to deliver fresh insights, and increasingly expect them to demonstrate foresight. To achieve what is expected, it is crucial to understand the dynamics of conversations in the boardroom and around the audit committee table. This book provides those unique perspectives. The journey from the 'mailroom to the boardroom' follows the story of a young banker who moved into the internal auditing profession as part of the 'new breed', then rose through the ranks into senior leadership and chief audit executive roles, before assuming audit committee and board roles that had an immense influence on governance, risk, compliance, and audit professionals. Success does not always follow a smooth and uneventful trajectory, and this story reflects insights from both the ups and the downs of the journey. Each chapter shares insights, better practices, case studies, practical examples, and real-life challenges and draws them together into 101 building blocks, each one providing crucial career-long learnings. The storytelling provides insights to people at all levels on the importance of positioning oneself to step into leadership roles, helps them understand how to evaluate and pursue potential career growth opportunities, provides tips on how to holistically manage and advance their career, and inspires higher-level thinking that enhances governance, risk, compliance and audit practices.
