Bernadette Mazurek Melnyk and Ellen Fineout-Overholt are creators of the ARCC (Advancing Research and Clinical practice through close Collaboration) Model, an innovative strategy for implementing and sustaining evidence-based practice in healthcare systems. The ARCC Model is cited as an exemplar of education in evidence-based practice in the Board on Health Care Services and the Institute of Medicine's book, *Health Professions Education: A Bridge to Quality*. "Melnyk and Fineout-Overholt's book should be required reading in all graduate programs. Their text has provided a blueprint for the future of nursing practice and a rigorously substantiated and clearly described means for clinicians, educators, and administrators to participate in improving quality of care." Janet D. Allan, PhD, RN, FAAN Dean and Professor University of Maryland School of Nursing "Evidence-based Practice in Nursing & Healthcare: A Guide to Best Practice has been instrumental in developing a culture of evidence-based practice at Barnes-Jewish Hospital. It is fundamental to our curriculum provided to all levels of staff, from new graduate nurses to the highest levels of hospital leadership." Dr. Patricia Potter, RN, PhD, FAAN, Dr. Gail Rea, RN, PhD, CNE, Dr. Karen Balakas, RN, PhD, CNE, Jennifer Williams, MSN, RN, ACNS-BC, Elizabeth Pratt, MSN, RN, ACNS-BC Evidence Equals Excellence group at Barnes-Jewish Hospital and Barnes-Jewish School of Nursing at Goldfarb "Evidence-based Practice in Nursing & Healthcare: A Guide to Best Practice is an exemplary text that spans the continuum of nursing evidence to support best practice. Utilizing this text with undergraduate, RN to BSN, and graduate nursing students, it is the ONLY text that demonstrates how to retrieve, read, and analyze evidence whether it is published as an individual study, systematic review, meta-analysis, best practice guideline, or outcomes management report. Students learn how to utilize multiple complex databases and websites as they move through each chapter. And, they experience dissemination of evidence through the development of presentations, publications, posters, and grants. This is truly a remarkable book that embraces evidence as the basis for nursing practice and patient-centered care and safety. Having used this text with more than 1000 students over the past five years, I can honestly say that I have found no other text that facilitates learning and development of clinical judgment that is grounded in valid, reliable, and applicable evidence. This is a keeper! Alice E. Dupler, JD, APRN-BC Clinical Associate Professor Washington State University College of Nursing "I have used the book since I developed the Evidence-based Practice course for our College of Nursing in Fall 2007. It was the first course of its kind at Indiana State University. It has been well received and the preferred course for all nursing graduate students for completion of their final scholarly projects. The text was essential in developing the course and provides the foundation and guidance that the students need to develop their Evidence Based Practice projects...the students love the text!" It has become fashionable to assume that concerted action to bring about social reform is a waste of time. If we are to move beyond the current laments about how nothing works anymore, we must view the reform process from the perspective of the community groups involved-those who make it work or fail-and understand how and why they behave as they do. "Social Construction of Reform" is an analysis of the activities of community groups who used Ford Foundation funding to prevent crime. The authors ask: What are the goals of the community groups who are involved in the reform? What are they trying to accomplish with their participation in the program? Are their goals synonymous with those who fund and evaluate the activity? The authors begin by analyzing the implementation of the grant by the groups involved. They describe the origins of the group's planned intervention, the nature of what is called community crime prevention, and then they examine the impact of external funding on community organizations as a generic issue. They take a careful look at what the groups did with the Foundation's support, to understand how well the groups' crime prevention strategy they employed supported their ideology. The block watch is examined in detail as the tactic most often employed. The authors conclude with observations on what success and failure mean in the context of the findings reported, offering a better understanding of reforms and new criteria to assess their effectiveness.

This book focuses on a gap in current social work practice theory: community change. Much work in this area of macro practice, particularly around "grassroots" community organizing, has a somewhat dated feel to it, is highly ideological in orientation, or suffers from superficiality, particularly in the area of theory and practical application. Set against the context of an often narrowly constructed "clinical" emphasis on practice education, coupled with social work's own current rendering of "scientific management," community practice often takes second or third billing in many professional curricula despite its deep roots in the overall field of social welfare. Drawing on extensive case study data from three significant community-building initiatives, program data from numerous other community capacity-building efforts, key informant interviews, and an excellent literature review, Chaskin and his colleagues draw implications for crafting community change strategies as well as for creating and sustaining the organizational infrastructure necessary to support them. The authors bring to bear the perspectives of a variety of professional disciplines including sociology, urban planning, psychology, and social work. Building Community Capacity takes a collaborative, interdisciplinary approach to a subject of wide and current concern: the role of neighborhood and community structures in the delivery of human services or, as the authors put it, "a place where programs and problems can be fitted together." Social work scholars and students of community practice seeking new conceptual frameworks and insights from research to inform novel

community interventions will find much of value in Building Community Capacity.

During the past quarter century, community psychologists have worked to make relevant contributions to human welfare in community settings and to effect social change. Working with and in schools, neighborhood organizations, religious institutions, social programs, and government agencies, the community psychologist has come to understand how social settings and social policy influence behavior and foster change that promotes individual health and well-being. Using a social ecological paradigm as their guiding framework, they focus on the interactions between persons and their environments, cultural diversity, and local empowerment for understanding organizational, community, and social change. Community psychologists have relied on multiple methods of obtaining data but more often, they have had to develop new methodologies or adapt existing ones. These innovative methods have been recorded in the American Journal of Community Psychology throughout the years of its history and have changed the way that researchers in the field have gathered data.

Auditors are trained to investigate beyond appearances to determine the underlying facts—in other words, to look beneath the surface. The recent financial crisis has made this skill even more crucial to the business community. As a result of this recent crisis and of the financial statement accounting scandals that occurred at the turn of the century, understanding the auditor's responsibility related to fraud, maintaining a clear perspective, probing for details, and understanding the big picture are indispensable to effective auditing. The author team of Louwers, Ramsay, Sinason, Strawser, and Thibodeau has dedicated years of experience in the auditing field to this new edition of Auditing & Assurance Services, supplying the necessary investigative tools for future auditors.

Whether focused on flower gardens, street crime, or aesthetic conformity, urban block clubs are unusual quasi-institutions that can establish or maintain a neighborhood's appearance, social dynamics, and quality of life. But what is a block club? And how does it function? Is it a definable institution, with codifiable practices and expectations, or is it merely an assemblage of like-minded citizens who happen to live near one another? What makes one such group effective and long-lasting, while most evaporate after a few years of communal activity? These are some of the questions that Amanda Seligman addresses in her deeply researched study.

*The SAGE Encyclopedia of Action Research* Lippincott Williams & Wilkins

What do you do if your alley is strewn with garbage after the sanitation truck comes through? Or if you're tired of the rowdy teenagers next door keeping you up all night? Is there a vacant lot on your block accumulating weeds, needles, and litter? For a century, Chicagoans have joined block clubs to address problems like these that make daily life in the city a nuisance. When neighbors work together in block clubs, playgrounds get built, local crime is monitored, streets are cleaned up, and every summer is marked by the festivities of day-long block parties. In Chicago's Block Clubs, Amanda I. Seligman uncovers the history of the block club in Chicago—from its origins in the Urban League in the early 1900s through to the Chicago Police Department's twenty-first-century community policing program. Recognizing that many neighborhood problems are too big for one resident to handle—but too small for the city to keep up with—city residents have for more than a century created clubs to establish and maintain their neighborhood's particular social dynamics, quality of life, and appearance. Omnipresent yet evanescent, block clubs are sometimes the major outlets for community organizing in the city—especially in neighborhoods otherwise lacking in political strength and clout. Drawing on the stories of hundreds of these groups from across the city, Seligman vividly illustrates what neighbors can—and cannot—accomplish when they work together.

In this book, Irving Spergel details the efforts of his Chicago youth gang project, a comprehensive, community-based model designed to reduce gang problems, including violence and illegal drug activity. He offers an in-depth description of the Little Village Gang Violence Reduction Project, revealing the successes and failures of intervention at each level: individual youths, the gang itself, and the community at large. Spergel relates how a coalition of criminal justice, neighborhood, and academic organizations\_ along with a team of tactical officers, probation officers, former gang leaders, and a neighborhood organization\_ developed strategies for dealing with hardcore violent male youths from two gangs: the Latin Kings and Two Six. This well-known project has become the model for a series of national initiatives. Policymakers, criminologists, and gang researchers will find this model valuable for assessing gang programs and reducing gang violence.

"To Live Peaceably Together is a lively examination of the methods and accomplishments of the American Friends Service Committee (AFSC), a primarily Quaker group that took a unique and influential approach to cultivating cultural acceptance of residential integration in America after World War II. K'Meyer offers a close study of how a social movement develops and wields influence, and how social activists do their work and why. Driven by detailed stories of activists and the obstacles they encountered, the book studies how a mostly white faith-based activist group worked to ally itself to a cause that demanded constant learning and reassessment. K'Meyer details the AFSC members' spiritual and humanist motivations, their understandings of segregation, their visions of integrated neighborhoods, as well as how their strategies changed as they came to better understand structural inequality, and how they were eventually adopted by other groups"--

The prominent contributors in *Friends and Citizens* examine the relationship between friendship and politics in American thought and contend that democratic politics is incomplete without citizen

friendship, and, similarly, friends need political life to provide a framework for virtue. This volume honors Wilson Carey McWilliams, a leading teacher and scholar of our time. Fourteen essays, by teachers, colleagues and students, pay tribute to him as friend and citizen, and seek to share their understanding of McWilliams's thinking through their own analyses of American political life. *Friends and Citizens* is rich in the humor, insights, heritage, despair and hope that characterize the work of Carey McWilliams and his unique vision of America's political promise. This is an important book for anyone interested in modern politics.

Action research is a term used to describe a family of related approaches that integrate theory and action with a goal of addressing important organizational, community, and social issues together with those who experience them. It focuses on the creation of areas for collaborative learning and the design, enactment and evaluation of liberating actions through combining action and research, reflection and action in an ongoing cycle of cogenerative knowledge. While the roots of these methodologies go back to the 1940s, there has been a dramatic increase in research output and adoption in university curricula over the past decade. This is now an area of high popularity among academics and researchers from various fields—especially business and organization studies, education, health care, nursing, development studies, and social and community work. The SAGE Encyclopedia of Action Research brings together the many strands of action research and addresses the interplay between these disciplines by presenting a state-of-the-art overview and comprehensive breakdown of the key tenets and methods of action research as well as detailing the work of key theorists and contributors to action research.
