 Biodynamic Craniosacral Therapy (BCST) is commonly seen as the spiritual approach to craniosacral therapy (CST); in fact, BCST as

taught by Franklyn Sills, the pioneer in the field, is quite different from conventional CST. Biodynamic work is based on the development of perceptual skills where the practitioner learns to become sensitive to subtle respiratory motions called primary respiration and also to the power of spontaneous healing. Through the Breath of Life, which, Sills asserts, echoes the Holy Spirit in the Judeo-Christian tradition, bodhicitta in Buddhism, and the Tai Chi in Taoism, students of BCST learn to enter a state of presence oriented to the client's inherent ability to heal. In Foundations in Craniosacral Biodynamics, Sills offers students and practitioners an in-

depth, step-by-step guide to the development of perceptual and clinical skills with specific clinical exercises and explorations to help students and practitioners learn the essentials of a biodynamic approach. Individual chapters cover such topics as holism and biodynamics; mid-tide, Long Tide, Dynamic Stillness and stillpoint process; the motility of tissues and the central nervous system; transference and the shadow; shamanistic resonances; and more. 'Sometimes called coining, spooning or scraping, Gua sha is defined as instrument-assisted unidirectional press-stroking of a lubricated area of the body surface that intentionally creates 'transitory therapeutic petechiae' representing extravasation of blood in the subcutis.' Gua sha has been used for centuries in Asia, in Asian immigrant communities and by acupuncturists and practitioners of traditional East Asian medicine worldwide. With the expansion of traditional East Asian medicine, Gua sha has been used over broad geographic areas and by millions of people. It is valuable in the treatment of pain and for functional problems with impaired

movement, the prevention and treatment of acute infectious illness, upper respiratory and digestive problems, and many acute or chronic disorders. Research has demonstrated Gua sha radically increases surface microperfusion that stimulates immune and anti-inflammatory responses that persist for days after treatment. The second edition expands on the history of Gua sha and similar techniques used in early Western Medicine, detailing traditional theory, purpose and application and illuminated by science that focuses its relevance to modern clinical practice as well as scholarly inquiry. This book brings the

technique alive for practitioners, with clear discussion of how to do it - including correct technique, appropriate application, individualization of treatment - and when to use it, with over 50 case examples, and superb color photographs and line drawings that demonstrate the technique. NEW TO THIS EDITION • New chapter on immediate and significant Tongue changes as a direct result of Gua sha • Research and biomechanisms • Literature review from Chinese language as well as English language medical journal database • New case studies • Over 30 color photographs

masterpiece is the most detailed study of acupuncture available in a Western language. It was nominated for a Nobel prize and provided the foundation for French acupuncture. This text is divided into 5 parts: the energetics of acupuncture, the application of the energetics, physiology, meridians and points, and treatment. This book is a unique historical document, but more than this, it is the most practical of texts and has already served a generation of clinicians well.

Uno dei miei antichi Maestri, Jean-Marc Kespy, si raccomandava di “dimenticare il sintomo”, questo è stato lo stimolo nella mia pratica clinica e nella mia docenza in ambito sanitario e osteopatico da oltre 35 anni più altri impulsi trasmessi da altri colleghi e amici come Alain Bernard, Laurie Hartman e Raymond

Richard. L'osteopata, come la Medicina Osteopatica espone nei suoi principi, deve avere una visione globale non solo fra un distretto e l'altro o fra l'esterno e l'interno ma deve relazionarsi con tutte le dinamiche biologiche, energetiche, sensoriali ed emotive contingenti, in caso contrario il suo operato è superficiale.

In this volume, the communicative and neuropsychological correlates of daily interactions are discussed. The predominant account on explaining the construction of meaning by humans is the inter-relational perspective, that postulates an intentional convergence of meaning arising as a consequence of the active exchanges between people. The neural correlates of communication were illustrated in the light of new empirical

results, considering the main topics of: a) language and language development; b) pragmatics and neuropragmatics of communication; c) neurocognition and the cognitive bases of intentions; d) nonverbal communication and emotion contribution to the communicative systems. New methodological approaches are considered, with particular attention to neuroimaging (such as PET and fMRI) and brain stimulation techniques (as MEG and TMS), as well as their application to the clinical field.
