This report discusses safety issues identified during the National Transportation Safety Board's special investigation of 55 emergency medical services (EMS) aircraft accidents that occurred in the United States between January 2002 and January 2005. Safety issues discussed in this report focus on less stringent requirements for EMS operations conducted without patients on board, a lack of aviation flight risk evaluation programs for EMS operations, a lack of consistent, comprehensive flight dispatch procedures for EMS operations, and no requirements to use technologies such as terrain awareness and warning systems to enhance EMS flight safety. This book provides an international legal analysis of the most important questions regarding Iran's nuclear program since 2002. Setting these legal questions in their historical and diplomatic context, this book aims to clarify how the relevant sources of international law - including primarily the 1968 Nuclear Non-proliferation Treaty and IAEA treaty law - should be properly applied in the context of the Iran case. It provides an instructional case study of the application of these sources of international law, the lessons which can be applied to inform both the on-going legal and diplomatic dynamics surrounding the Iran nuclear dispute itself, as well as similar future cases. Some questions raised regard the watershed diplomatic accord reached between Iran and Western states in July, 2015, known as the Joint Comprehensive Program of Action. The answers will be of interests to diplomats and academics, as well as to anyone who is interested in understanding international law's application to this sensitive dispute in international relations.
