From the Executive Director of Mental Health for Correctional Services in New York City, comes a revelatory and deeply compassionate memoir that takes readers inside Bellevue, and brings to life the world—the system, the staff, and the haunting cases—that shaped one young psychiatrist as she learned how to doctor and how to love. Elizabeth Ford went through medical school unsure of where she belonged. It wasn't until she did her psychiatry rotation that she found her calling—to care for one of the most vulnerable populations of mentally ill people, the inmates of New York's jails, including Rikers Island, who are so sick that they are sent to the Bellevue Hospital Prison Ward for care. These men were broken, unloved, without resources or support, and very ill. They could be violent, unpredictable, but they could also be funny and tender and needy. Mostly, they were human and they awakened in Ford a boundless compassion. Her patients made her a great doctor and a better person and, as she treated these men, she learned about doctoring, about nurturing, about parenting, and about love. While Ford was a psychiatrist at Bellevue she becomes a wife and a mother. In her book she shares her struggles to balance her life and her work, to care for her children and her patients, and to maintain the empathy that is essential to her practice—all in the face of a jaded institution, an exhausting workload, and the deeply emotionally taxing nature of her work. Ford brings humor, grace, and humanity to the lives of the patients in her care and in beautifully rendered prose illuminates the inner workings (and failings) of our mental health system, our justice system, and the prison system.

The problems of the patellofemoral joint remain a challenge to the orthopaedic surgeon. In spite of many articles in scientific journals, an outstanding monograph, and several excellent textbook chapters, the patella is still an enigma in many respects. The etiology of patellar pain is controversial, and there is no completely satisfying explanation for its cause or its relationship to chondromalacia. Curiously, neither the widespread use of arthroscopy nor the advent of newer diagnostic tests such as CT scanning and magnetic resonance imaging have cast much light. Without a better understanding of why patellar disorders occur it is not surprising that there is no consensus on how to fix them. Arthros copy has contributed little except to the patient's psyche. The currently most popular surgical treatment for recurrent dislocation of the patella was first described 50 years ago. One concrete advance, albeit a small one, is a better understanding of the role of anatomical abnormalities and patellofemoral dysplasia in patellar instabilities. It gives me great pleasure that many of the contributors are, like Dr.

Criminals are often the earliest, and most innovative, adopters of technology, and modern times have led to modern crimes. Today's criminals steal identities, drain online bank accounts and wipe out computer servers. It's disturbingly easy to activate baby monitors to spy on families, pacemakers can be hacked to deliver a lethal jolt of electricity and thieves are analyzing your social media in order to determine the best time for a home invasion. Meanwhile, 3D printers produce AK-47s, terrorists can download the recipe for the Ebola virus and drug cartels are building drones. This is just the beginning of the tsunami of technological threats coming our way. In Future Crimes, Marc Goodman rips opens his database of hundreds of real cases to give us front-row access to these impending perils. Reading like a sci-fi thriller, Future Crimes raises tough questions about the expanding role of technology in our lives. Future Crimes is a call to action for better security measures worldwide, but most importantly, it will empower readers to protect themselves against looming threats—before it's too late.
