The Curious Map Book

National
Geographic
Discover the mysteries
within ancient maps —
Where exploration and
mythology meet This

richly illustrated book
collects and explores
the colorful histories
behind a striking range
of real antique maps
that are all in some
way a little too good to
be true. Mysteries
within ancient maps:
The Phantom Atlas is a
guide to the world not
as it is, but as it was
imagined to be. It's a
world of ghost islands,

invisible mountain ranges, mythical civilizations, shipwrecking beasts, and other fictitious features introduced on maps and atlases through mistakes, misunderstanding, fantasies, and outright lies. Where exploration and mythology meet: Author Edward Brooke-Hitching is a map collector, author, writer for the popular BBC Television program *QI* and a Fellow of the Royal Geographical Society. He lives in a dusty heap of old maps and books in London investigating the places where exploration and mythology meet. Cartography's greatest phantoms: The Phantom Atlas uses gorgeous atlas images as springboards for tales of deranged

buccaneers, seafaring monks, heroes, swindlers, and other amazing stories behind cartography's greatest phantoms. If you are a fan of this popular genre and a reader of books such as *Prisoners of Geography*, *Atlas of Ancient Rome*, *Atlas Obscura*, *What If*, *Book of General Ignorance*, or *Thing Explainer*, you will love *The Phantom Atlas* *Lost Maps of the Caliphs* Cambridge University Press "It is the summer of 1854. Cholera has seized London with unprecedented intensity. A metropolis of more than 2 million people, London is just emerging as one of the first modern cities in the world. But lacking the infrastructure necessary to support

its dense population - garbage removal, clean water, sewers - the city has become the perfect breeding ground for a terrifying disease that no one knows how to cure." "As their neighbors begin dying, two men are spurred to action: the Reverend Henry Whitehead, whose faith in a benevolent God is shaken by the seemingly random nature of the victims, and Dr. John Snow, whose ideas about contagion have been dismissed by the scientific community, but who is convinced that he knows how the disease is being transmitted. The Ghost Map chronicles the outbreak's spread and the desperate efforts to put an end to the epidemic - and solve the most pressing

medical riddle of the age."--BOOK JACKET. *London Underground Maps* Simon and Schuster
 Geocomputation with R is for people who want to analyze, visualize and model geographic data with open source software. It is based on R, a statistical programming language that has powerful data processing, visualization, and geospatial capabilities. The book equips you with the knowledge and skills to tackle a wide range of issues manifested in geographic data, including those with scientific, societal, and environmental implications. This book will interest people from many backgrounds, especially Geographic Information Systems

(GIS) users interested in applying their domain-specific knowledge in a powerful open source language for data science, and R users interested in extending their skills to handle spatial data. The book is divided into three parts: (I) Foundations, aimed at getting you up-to-speed with geographic data in R, (II) extensions, which covers advanced techniques, and (III) applications to real-world problems. The chapters cover progressively more advanced topics, with early chapters providing strong foundations on which the later chapters build. Part I describes the nature of spatial datasets in R and methods for manipulating them. It

also covers geographic data import/export and transforming coordinate reference systems. Part II represents methods that build on these foundations. It covers advanced map making (including web mapping), "bridges" to GIS, sharing reproducible code, and how to do cross-validation in the presence of spatial autocorrelation. Part III applies the knowledge gained to tackle real-world problems, including representing and modeling transport systems, finding optimal locations for stores or services, and ecological modeling. Exercises at the end of each chapter give you the skills needed to tackle a range of geospatial problems. Solutions for each

chapter and supplementary materials providing extended examples are available at <https://geocompr.github.io/geocompkg/articles/>. Dr. Robin Lovelace is a University Academic Fellow at the University of Leeds, where he has taught R for geographic research over many years, with a focus on transport systems. Dr. Jakub Nowosad is an Assistant Professor in the Department of Geoinformation at the Adam Mickiewicz University in Poznan, where his focus is on the analysis of large datasets to understand environmental processes. Dr. Jannes Muenchow is a Postdoctoral Researcher in the GIScience Department at the University of

Jena, where he develops and teaches a range of geographic methods, with a focus on ecological modeling, statistical geocomputing, and predictive mapping. All three are active developers and work on a number of R packages, including `stplanr`, `sabre`, and `RQGIS`.

London Popout Map Penguin

The unique character of San Francisco's Chinatown is revealed in a historical map and fascinating photographs This colorful and playful time capsule of San Francisco's Chinatown shares the stories of the unique businesses, culture, and people encountered by map illustrator Ken Cathcart between 1939 and 1955. Each quadrant of

the map, supplemented by never-before-seen black-and-white photographs and meticulous research, drops the reader into a world of curious characters that reveals a glimpse of the immigration story so universal to America in both its celebratory aspects and its darkness.

Maps and Symbols
Black Dog Publishing
Over the past 2000 years, London has developed from a small town, fitting snugly within its walls, into one of the world's largest and most dynamic cities. London: A History in Maps illustrates and helps to explain the transformation using over 400 examples of maps. Side-by-side with the great, semi-

official, but sanitized images of the whole city, there are the more utilitarian maps and plans of the parts-- actual and envisaged-- which perhaps present more than topographical records. They all have something unique to say about the time when they were created. Peter Barber's book reveals the "inside story" behind one of the world's greatest cities.

Maps of the World
World Scientific
Take a tour of the United Kingdom as you've never seen it before in this fully illustrated set of county maps. Travel through England, Northern Ireland, Scotland and Wales and meet the incredible people born there, learn about its

proud history, and discover ancient castles, modern feats of engineering and natural highlights while you revel in the nation's curiosities, from the spectacular, to the quirky, to the downright strange! A fabulous introduction to Shakespeare's Sceptre Isle, for readers young and old.

Gold Mountain, Big City University of Chicago Press
The story of an infamous crime, a revered map dealer with an unsavory secret, and the ruthless subculture that consumed him
Maps have long exerted a special fascination on viewers—both as beautiful works of art and as practical tools to navigate the world. But to those who

collect them, the map trade can be a cutthroat business, inhabited by quirky and sometimes disreputable characters in search of a finite number of extremely rare objects. Once considered a respectable antiquarian map dealer, E. Forbes Smiley spent years doubling as a map thief—until he was finally arrested slipping maps out of books in the Yale University library. The *Map Thief* delves into the untold history of this fascinating high-stakes criminal and the inside story of the industry that consumed him. Acclaimed reporter Michael Blanding has interviewed all the key players in this stranger-than-fiction story, and shares the

fascinating histories of maps that charted the New World, and how they went from being practical instruments to quirky heirlooms to highly coveted objects. Though pieces of the map theft story have been written before, Blanding is the first reporter to explore the story in full—and had the rare privilege of having access to Smiley himself after he'd gone silent in the wake of his crimes. Moreover, although Smiley swears he has admitted to all of the maps he stole, libraries claim he stole hundreds more—and offer intriguing clues to prove it. Now, through a series of exclusive interviews with Smiley and other key individuals, Blanding teases out an astonishing tale of

destruction and redemption. The Map Thief interweaves Smiley's escapades with the stories of the explorers and mapmakers he knew better than anyone. Tracking a series of thefts as brazen as the art heists in Provenance and a subculture as obsessive as the oenophiles in The Billionaire's Vinegar, Blanding has pieced together an unforgettable story of high-stakes crime. *National Geographic Walking Guide: London 3rd Edition* Unbound Publishing
A lavishly illustrated, fact-filled, oversized atlas that allows children to discover the world without leaving their home. Covering every continent, country, even outer

space, Maps of the World is a vibrant and comprehensive atlas that children of all ages will love to explore. The dozens of colorful, detailed maps are filled with charming, educational icons representing the aboriginal people in Australia, giant tortoises in the Galapagos, the Gold Rush in California, traditional dress in Mali, and even James Bond in England. Flip the next page in the book, and the corresponding icon key explains hundreds of these cultural, environmental, and societal illustrations. Organized by continent, the atlas also includes details on populations, language, agricultural, politics, and other bite-size facts. Each map

includes a link allowing kids to download a version of them on computers and tablets to explore even further. Captivating and comprehensive, Maps of the World will entice even the most reluctant young explorer.

Great City Maps

Springer Science & Business Media

A New York Times

Bestseller “Maps allow

the armchair traveler

to roam the world, the

diplomat to argue his

points, the ruler to

administer his country,

the warrior to plan his

campaigns and the

propagandist to boost

his cause... rich and

beautiful.” - Wall

Street Journal

Throughout history,

maps have been

fundamental in shaping

our view of the world,

and our place in it. But

far from being purely scientific objects, maps of the world are unavoidably ideological and subjective, intimately bound up with the systems of power and authority of particular times and places. Mapmakers do not simply represent the world, they construct it out of the ideas of their age. In this scintillating book, Jerry Brotton examines the significance of 12 maps - from the almost mystical representations of ancient history to the satellite-derived imagery of today. He vividly recreates the environments and circumstances in which each of the maps was made, showing how each conveys a highly individual view of the world. Brotton shows how each of his maps

both influenced and reflected contemporary events and how, by considering it in all its nuances and omissions, we can better understand the world that produced it. Although the way we map our surroundings is more precise than ever before, Brotton argues that maps today are no more definitive or objective than they have ever been. Readers of this beautifully illustrated and masterfully argued book will never look at a map in quite the same way again. "A fascinating and panoramic new history of the cartographer's art." - The Guardian "The intellectual background to these images is conveyed with beguiling erudition.... There is nothing more

subversive than a map." – The Spectator
 "A mesmerizing and beautifully illustrated book." —The Telegraph
The Phantom Atlas
 Wide Eyed Editions
 By documenting and guiding us on the journeys we make every day, maps influence the way we navigate and identify with our surroundings. The Underground, London Transport, and its successor Transport for London, have produced and inspired maps which are navigational, decorative forms of publicity and works of art. This book, which draws on the rich collections of the London Transport Museum, sets out to explore this unique form of visual communication.

DK Eyewitness
London Mini Map and Guide Lund Humphries Publishers
 First Published in 1998.
 An exploration narrative can be a tale of adventure and endurance, a technical account of navigation and seamanship, or a political history of the overseas empires that were built up in the wake of the explorers. In *New Found Lands*, Peter Whitfield takes a different approach. By focusing on the maps that the explorers

themselves used, Whitfield reveals how the both the explorers and their patrons understood their expanding world and their place in it, what they were seeking and how they thought they could achieve it, and how they integrated new knowledge into their evolving world view. The maps in New Found Lands present the geographical ideas of the time, making plain the power that came with increasing technical and geographical knowledge. They also serve as evocative and poignant reminders of the limited knowledge of these explorers. For up until very recent times, as these maps show, there have been areas of the world remaining to be explored and "new

found lands" to discover. This lavishly illustrated book progresses chronologically, starting with the explorers of the ancient world, covering the East, the New World, the Pacific, Australia and the Modern Era. It will enrich our understanding of the voyages of discovery undertaken over the past 2000 years and will delight any map or history lover. Also includes 150 color and black and white maps. Mind the Map Dorling Kindersley Ltd Presents fifteen step-by-step itineraries for exploring London, plus streamlined tours for seeing the city in a day, in a weekend, for fun, and with children. **Maps of the United Kingdom** British

Library

A pocket-sized travel guide, packed with expert advice and ideas for the best things to see and do in London, and complemented with a sturdy pull-out map - perfect for a day trip or a short break. Whether you want to stroll through royal parks and palaces, seek out the best pubs and restaurants, discover historic monuments or avant-garde art - this great-value, concise travel guide will ensure you don't miss a thing. Inside Mini Map and Guide London: - Easy-to-use pull-out map shows London in detail, and includes an Underground map - Color-coded area guide makes it easy to find information quickly and plan your day - Illustrations show the

inside of some of London's most iconic buildings - Color photographs of London's museums, architecture, shops, palaces, and more - Essential travel tips including our expert choices of where to eat, drink and shop, plus useful transportation, currency and health information - Chapters covering Whitehall and Westminster; Mayfair and St James's; Soho and Trafalgar Square; Covent Garden and the Strand; Holborn and the Inns of Court; Bloomsbury and Fitzrovia; King's Cross, Camden and Islington; The City; Shoreditch and Spitalfields; Southwark and Bankside; South Bank; Chelsea and Battersea; South Kensington and Knightsbridge;

This atlas traces the formation and

development of the U.S. over 500 years, from the time of the early European colonies through to the densely developed and influential country it is today. It also discusses the events leading to the discovery of North America. It looks at American cartography as well.

Mapping Antarctica Penguin

Virtual cities are places of often-fractured geographies, impossible physics, outrageous assumptions and almost untamed imaginations given digital structure. This book, the first atlas of its kind, aims to explore, map, study and celebrate them. To imagine what they would be like in reality. To paint a lasting picture of their domes,

arches and walls. From metropolitan sci-fi open worlds and medieval fantasy towns to contemporary cities and glimpses of gothic horror, author and urban planner Konstantinos Dimopoulos and visual artist Maria Kallikaki have brought to life over forty game cities. Together, they document the deep and exhilarating history of iconic gaming landscapes through richly illustrated commentary and analysis. *Virtual Cities* transports us into these imaginary worlds, through cities that span over four decades of digital history across literary and gaming genres. Travel to fantasy cities like World of Warcraft's Orgrimmar and Grim Fandango's Rubacava;

envision what could be in the familiar cities of Assassin's Creed's London and Gabriel Knight's New Orleans; and steal a glimpse of cities of the future, in Final Fantasy VII's Midgar and Half-Life 2's City 17. Within, there are many more worlds to discover - each formed in the deepest corners of the imagination, their immense beauty and complexity astounding for artists, game designers, world builders and, above all, anyone who plays and cares about video games.

Virtual Cities Walter Foster Publishing
Where is paradise? It always seems to be elsewhere, inaccessible, outside of time. Either it existed yesterday or it will return tomorrow; it

may be just around the corner, on a remote island, beyond the sea. Across a wide range of cultures, paradise is located in the distant past, in a longed-for future, in remote places or within each of us. In particular, people everywhere in the world share some kind of nostalgia for an innocence experienced at the beginning of history. For two millennia, learned Christians have wondered where on earth the primal paradise could have been located. Where was the idyllic Garden of Eden that is described in the Bible? In the Far East? In equatorial Africa? In Mesopotamia? Under the sea? Where were Adam and Eve created in their unspoiled perfection? Maps of

Paradise charts the diverse ways in which scholars and mapmakers from the eighth to the twenty-first century rose to the challenge of identifying the location of paradise on a map, despite the certain knowledge that it was beyond human reach. Over one hundred illustrations celebrate this history of a paradox: the mapping of the unmappable. It is also a mirror to the universal dream of perfection and happiness, and the yearning to discover heaven on earth. *Map: Assembling the World in An Image* Wide Eyed Editions About a millennium ago, in Cairo, an unknown author completed a large and richly illustrated book. In the course of thirty-

five chapters, this book guided the reader on a journey from the outermost cosmos and planets to Earth and its lands, islands, features, and inhabitants. This treatise, known as *The Book of Curiosities*, was unknown to modern scholars until a remarkable manuscript copy surfaced in 2000. *Lost Maps of the Caliphs* provides the first general overview of *The Book of Curiosities* and the unique insight it offers into medieval Islamic thought. Opening with an account of the remarkable discovery of the manuscript and its purchase by the Bodleian Library, the authors use *The Book of Curiosities* to re-evaluate the development of astrology, geography,

and cartography in the first four centuries of Islam. Their account assesses the transmission of Late Antique geography to the Islamic world, unearths the logic behind abstract maritime diagrams, and considers the palaces and walls that dominate medieval Islamic plans of towns and ports. Early astronomical maps and drawings demonstrate the medieval understanding of the structure of the cosmos and illustrate the pervasive assumption that almost any visible celestial event had an effect upon life on Earth. *Lost Maps of the Caliphs* also reconsiders the history of global communication networks at the turn of the previous

millennium. It shows the Fatimid Empire, and its capital Cairo, as a global maritime power, with tentacles spanning from the eastern Mediterranean to the Indus Valley and the East African coast. As *Lost Maps of the Caliphs* makes clear, not only is *The Book of Curiosities* one of the greatest achievements of medieval mapmaking, it is also a remarkable contribution to the story of Islamic civilization that opens an unexpected window to the medieval Islamic view of the world. *A History of the World in 12 Maps* Wayland Shedding the Veil is a highly original overview of Europe's exploration and discovery beyond her own confines. It tackles the subject via an

analysis of maps dating from circa 1434 to 1865, with an emphasis on the period before 1600. The book begins with an appraisal of the peculiar circumstances which led late medieval Europe to pursue long-distance travel, both overland and by sea, introduces cosmographic traditions inherited from classical times, and investigates pre-Columbian excursions into the western ocean. Finally, the great voyages and mappaemundi of the early sixteenth century are described in depth. After 1600 the focus begins to narrow North America and particularly to the colonization of the American Northeast. All maps discussed in detail are illustrated.

40 full-page b/w plates, 25 full-page color plates. Contents: Part One: A World Called Europe: Precedents The World As Known to Medieval Europe Classical Enlightenment: The Renaissance Before Columbus Part Two: A New World: The Western Antipodes? The Race to Skirt America Truly a Fourth Part of the Globe Part Three: Early Colonization: The British and French The Dutch Pre- and Post- Revolution Readership: General. keywords: "... it is wonderful that a single collector could put together such treasures! The author provides readers with good information in a spritely manner ... The Book is physically attractive, and the sixty-five illustrations

(40 black and white; 25 color) are good. According to David Jolly in the flyer about the book, it will be sought after by collectors and dealers. In my opinion scholars could learn much from it as well ... The book offers a lively text about some very interesting and rare maps." Meridian "It is based on selected items from the collection of Sidney R Knafel, the quality and depth of which is clearly shown in the book ... It is good to see such a well illustrated book, and a work in which the discussions are clear, concise and informative ... An unusual feature is the binding of the book which is imitation leather rather than the usual cloth binding. This should ensure its

longevity." The Map Collector "The individual entries not only describe the map, but contain a wealth of information on the historical context of each item. Many obscure but interesting sidelights are given ... More than 300 footnotes and an extensive index evidence just how wide-ranging this work is ... any collector or dealer will find this a valuable addition to their reference library." Antique Map Handbook "The many explanatory footnotes will be of interest and help to less expert readers ... Mr Knafel, the collector; Mr Suarez the compiler, and the publisher deserve credit for an outstanding production that should please cartomaniacs very

much." Cartomania "This recently published book is probably the best book available on the early maps of the dsiccovery period. It also covers some important later maps chiefly relating to New England. The book is destined to be a classic." Paul Mahoney "In this well produced book, Thomas Suárez illustrates and describes 61 maps and globes in the Sidney R Knafel Collection. The maps were produced between 1472 and 1865, a period which saw considerable developments in exploration, science and map-making ... he shows wide knowledge and scholarship." IMCOS Journal "The book's excellent scholarly commentary on the 61 maps discussed and

illustrated sets it apart from the many coffee table publications which have appeared in recent years.” Society for the History of Discoveries “This book provide a very personal, interpretive look at important early map of the Americas ... I enjoyed the journey — and know I will return to this book again and again. Mr Suarez has great respect for the maps he describes, both for their cartographic artistry and the intellectual puzzles they present us ... This book represents a welcome and unusual linking of private collector, dealer, publisher and exhibitors.” Association of Canadian Map Libraries and Archives “Shedding the Veil is a welcome overview of

an extensive private collection for which no catalogue had been published. For individuals interested in the history of cartography, Suárez serves as a knowledgeable guide to these cartographic documents, interpreting them in the light of the historical, political and cultural context in which they were shaped.” Cartographica *Scratch and Learn World Atlas* University of Chicago Press The best of London as brought to you by Londonist, now featuring hand-drawn maps from some of our favorite British illustrators. Londonist is about London and everything that happens in it - and now it's mapped. The city at

your fingertips, brought to life by an eclectic group of illustrators. Whether you're looking for something new to do around Brick Lane, or wondering about London's bridges and how they got their names, Londonist's team of contributors

know the city and its history inside out. Appealing to map addicts, trivia junkies and Londoners-about town alike, this new compendium showcases hand-drawn maps inspired by some of the best of their writing.
