Blended solutions combine contrasting learning methods and media in order to maximise effectiveness and efficiency. The More Than approach goes a step further to ensure the blend results in application to real-world tasks and the learner is supported along the whole length of their learning journey. In this book, Clive Shepherd, one of the world's leading experts on the design of adult learning interventions, describes a simple design process that can be applied successfully by any learning professional. Using storytelling, case studies and compelling analysis, Clive describes how and why the More Than approach can transform adult learning.

Functional Index of Departmental Forms University of Oklahoma Press

The following steps are recommended for consistent, efficient, and effective plans and means for improving the development of U.S. Air Force officers in their career fields: (1) identify the demand for jobs in the field grades-major, lieutenant colonel, and colonel; (2) ascertain the backgrounds that officers have accumulated (assess the supply); (3) compare supply with demand (gap analysis); and (4) plan ways to close the gaps.

The Air Force Budget National Academies Press

AND developed an integrated survey system to help the U.S. Air Force's Air Education and Training Command monitor and address abuse and misconduct by military training instructors toward trainees during Basic Military Training.

An Integrated Survey System for Addressing Abuse and Misconduct Toward Air Force Trainees During Basic Military Training Association for Talent Development

This manual, TRADOC Pamphlet TP 600-4 The Soldier's Blue Book: The Guide for Initial Entry Soldiers August 2019, is the guide for all Initial Entry Training (IET) Soldiers who join our Army Profession. It provides an introduction to being a Soldier and Trusted Army Professional, certified in character, competence, and commitment to the Army. The pamphlet introduces Soldiers to the Army Ethic, Values, Culture of Trust, History, Organizations, and Training. It provides information on pay, leave, Thrift Saving Plans (TSPs), and organizations that will be available to assist you and your Families. The Soldier's Blue Book is mandated reading and will be maintained and available during BCT/OSUT and AIT. This pamphlet applies to all active Army, U.S. Army Reserve, and the Army National Guard enlisted IET conducted at service schools, Army Training Centers, and other training activities under the control of Headquarters, TRADOC.

White Awareness Rand Corporation

A week-by-week guide to surviving boot camp—includes interviews with recent graduates, recruiters, and instructors. Air Force basic training is challenging both mentally and physically. The Ultimate Guide to Air Force Basic Training shows you, step by step, how to survive and thrive in today's basic training program. Beginning with the recruiting process and taking you all the way

through basic training graduation day, this book answers your questions and helps alleviate your fears and concerns as you enter this new and exciting period of your life. Senior Airman Nicholas Van Wormer's book is a fresh and updated insider's view of what you will encounter and how to perform in order to graduate at the top of your class. It also includes interviews with recent basic training graduates, recruiters, and even military training instructors to better provide you with the most detailed guide to Air Force basic training ever published. It also explains acronyms and terms, mistakes to avoid, the all-important ASVAB test—and even offers tips on what to bring with you. Whether you're getting ready to ship out to basic training or just looking into the different military options available to you, The Ultimate Guide to Air Force Basic Training is an invaluable tool that will help guide you through. Whether you are getting ready to ship out to basic training or just looking into the different military options available to you, The Ultimate Guide to Air Force Basic Training is an invaluable tool that will help guide you through an otherwise daunting and difficult process.

Space Capstone Publication Spacepower Savas Beatie

USAF par rescue and combat controllers routinely recover downed or injured military personnel and direct military aircraft in hostile or denied regions. Consequently, to be effective in these careers requires the ability to cope with severe stress. The USAF uses many strategies to ensure that battlefield airmen perform well under stress but one strategy, termed stress inoculation training, has not been fully incorporated as a training element.

More Than Blended Learning Nova Science Publishers

This report documents how the Air Force could reduce the impact of institutional requirements on manpower in traditional career fields while ensuring that the organizations that depend on them are staffed with the qualified personnel they need.

The U.S. Air Force's special operations and combat support specialties in the enlisted force are among the highest in demand by the service yet have persistently high rates of attrition in their initial skills training, which is called "technical training" in the Air Force. These high-demand, high-attrition (HDHA) specialties include Combat Control; Explosive Ordnance Disposal; Pararescue; Survival, Evasion, Resistance, and Escape; Special Operations Weather Team; and Tactical Air Control Party. The Air Force has conducted or sponsored several efforts to address training attrition in these specialties over the past several years, yet training attrition remains high. The reasons for high training attrition are interrelated, with size and quality of the recruiting pool, utility of screening tools, and training environment factors all playing a role. This report addresses the broader challenges for implementing new approaches to HDHA specialty recruiting, screening, and development of Air Force candidates, and takes a holistic approach to identifying methods and tools to fill gaps in current processes

Department of Defense Dictionary of Military and Associated Terms Lulu.com

The USAir Force human capital management (HCM) system is not easily defined or mapped. It affects virtually every part of the Air Force because workforce policies, procedures, and processes impact all offices and organizations that include Airmen and responsibilities and relationships change regularly. To ensure the readiness of Airmen to fulfill the mission of the Air Force, strategic approaches are developed and issued through guidance and actions of the Office of the Deputy Chief of Staff for Manpower, Personnel and Services and the Office of the Assistant Secretary of the Air Force for Manpower and Reserve Affairs. Strengthening US Air Force Human Capital Management assesses and strengthens the various U.S. Air Force initiatives and programs working to improve person-job match and human capital management in coordinated support of optimal mission capability. This report considers the opportunities and challenges associated with related interests and needs across the USAF HCM system as a whole, and makes recommendations to inform improvements to USAF personnel selection and classification and other critical system components across career trajectories. Strengthening US Air Force Human Capital Management offers the Air Force a strategic approach, across a connected HCM system, to develop 21st century human capital capabilities essential for the success of 21st century Airmen.

Professional Military Education for Air Force Officers Rand Corporation

This report identifies opportunities for optimizing processes and policies in the U.S. Air Force nonrated technical training pipeline and recommends process and policy changes that could improve efficiency at all levels.

Opportunities for the Employment of Simulation in U.S. Air Force Training Environments

"Simulators currently provide an alternative to aircraft when it comes to training requirements, both for the military and for commercial airlines. For the U.S. Air Force, in particular, simulation for training offers a cost-effective way, and in many instances a safer way in comparison with live flying, to replicate real-world missions. Current technical issues related to simulation for training include simulation fidelity and multi-level security, among others, which will need to be addressed in order for the Air Force to take full advantage of this technology. The workshop held in November, 2014 examined the current status of simulation training, alternative uses, current and future technologies, and how the combination of simulation and live training can improve aircrew training. The scope of the workshop focused on technologies and practices that could be applicable to high-end aircraft simulations."-- Publisher's description

Air Education and Training Command Cost and Capacity System: Implications for Organizational and Data Flow Changes

A thoroughly trained, motivated enlisted workforce is the Air Force's key resource in meeting challenges of the future. The Career Field Education and Training Plan (CFETP) for AFSC 1T0X1, Survival, Evasion, Resistance, and Escape (SERE) Specialist, provides management with the life-cycle education/training framework and guidance necessary for planning, developing, managing, and conducting career field education and training programs. It provides a training guide for the career field that identifies mandatory and optional skill level training received during career progression. This CFETP identifies the specific training individuals receive during each phase of their career. This plan will provide personnel a clear path to success, instill rigor in all aspects of career field training, and train today's workforce for tomorrow's jobs.

Education Specialist (AFSC 75150)

The goal of this study was to help establish the strategic design for a comprehensive system to assess and manage the cost and capacity of the Air Force's pipeline for enlisted technical training. The study team concluded that such a system is useful only insofar as it supports the decision processes necessary for managing effective training. Therefore, this report examines training management and decision processes to determine the need for data to support informed decisionmaking. It briefly reviews training management systems and associated organizational arrangements in the other services and the private sector to draw insights for a model management system for the Air Force. The study identifies impediments to training planning and management in the current Air Force organizational structure that inhibit the flow of cost and capacity data and hinder effective decisionmaking. It also outlines analytic developments that could help convert raw data into information useful for decisionmakers.

The Airman's Guide

Tells the story of the men and woman of Air Education and Training Command (AETC) who rushed to the aid of their wingmen at Kessler Air Force Base and to their countrymen in need.

Training Success for U.S. Air Force Special Operations and Combat Support Specialties

This book, Space Capstone Publication Spacepower: Doctrine for Space Forces, is capstone doctrine for the United States Space Force and represents our Service's first articulation of an independent theory of spacepower. This publication answers why spacepower is vital for our Nation, how military spacepower is employed, who military space forces are, and what military space forces value. In short, this capstone document is the foundation of our professional body of knowledge as we forge an independent military Service committed to space operations. Like all doctrine, the SCP remains subject to the policies and strategies that govern its employment. Military spacepower has deterrent and coercive capacities - it provides independent options for National and Joint leadership but achieves its greatest potential when integrated with other forms of military power. As we grow spacepower theory and doctrine, we must do so in a way that fosters greater integration with the Air Force, Army, Navy, Marine Corps, and Coast Guard. It is only by achieving true integration and interdependence that we can hope to unlock spacepower's full potential.

Operation Dragon Comeback

The goal of this study was to help establish the strategic design for a comprehensive system to assess and manage the cost and capacity of the Air Force's pipeline for enlisted technical training. The study team concluded that such a system is useful only insofar as it supports the decision processes necessary for managing effective training. Therefore, this report examines training management and decision processes to determine the need for data to support informed decisionmaking. It briefly reviews training management systems and associated organizational arrangements in the other services and the private sector to draw insights for a model management system for the Air Force. The study identifies impediments to training planning and management in the current Air Force organizational structure that inhibit the flow of cost and capacity data and hinder effective decisionmaking. It also outlines analytic developments that could help convert raw data into information useful for decisionmakers.

Advancing the U.S. Air Force's Force-Development Initiative

The Air Force requires technical skills and expertise across the entire range of activities and processes associated with the development, fielding, and employment of air, space, and cyber operational capabilities. The growing complexity of both traditional and emerging missions is placing new demands on education, training, career development, system acquisition, platform sustainment, and development of operational systems. While in the past the Air Force's technologically intensive mission has been highly attractive to individuals educated in science, technology, engineering, and mathematics (STEM) disciplines, force reductions, ongoing military operations, and budget pressures are creating new challenges for attracting and managing personnel with the needed technical skills. Assessments of recent development and acquisition process failures have identified a loss of technical competence within the Air Force (that is, in house or organic competence, as opposed to contractor support) as an underlying problem. These challenges come at a time of increased competition for technical graduates who are U.S. citizens, an aging industry and government workforce, and consolidations of the industrial base that supports military systems. In response to a request from the Deputy Assistant Secretary of the Air Force for Science, Technology, and Engineering, the National Research Council conducted five fact-finding meetings at which senior Air Force commanders in the science and engineering, acquisition, test, operations, and logistics domains provided assessments of the adequacy of the current workforce in terms of quality and quantity.

Administration of Training

Since 1976, the International Military Education and Training (IMET) program has provided education and training to foreign military personnel. The program's objectives include professionalising military

forces and increasing respect for democratic values and human rights. In 2010, Congress appropriated \$108 million in IMET funding for more than 120 countries. The Department of State and the Department of Defense share responsibility for IMET. This book assesses changes in the program from fiscal years 2000 to 2010, by funding levels, students trained, and recipient countries; the program's provision of and emphasis on human rights training for its students; and the extent to which the Department of State and the Department of Defense monitor IMET graduates and evaluate program effectiveness.

Joint Ethics Regulation (JER).

A timely update to a timeless model. Don Kirkpatrick's groundbreaking Four Levels of Training Evaluation is the most widely used training evaluation model in the world. Ask any group of trainers whether they rely on the model's four levels Reaction, Learning, Behavior, and Results in their practice, and you'll get an enthusiastic affirmation. But how many variations of Kirkpatrick are in use today? And what number of misassumptions and faulty practices have crept in over 60 years? The reality is: Quite a few. James and Wendy Kirkpatrick have written Kirkpatrick's Four Levels of Training Evaluation to set the record straight. Delve into James and Wendy's new findings that, together with Don Kirkpatrick's work, create the New World Kirkpatrick Model, a powerful training evaluation methodology that melds people with metrics. In Kirkpatrick's Four Levels of Training Evaluation, discover a comprehensive blueprint for implementing the model in a way that truly maximizes your business's results. Using these innovative concepts, principles, techniques, and case studies, you can better train people, improve the way you work, and, ultimately, help your organization meet its most crucial goals.
