Derived from the renowned multi-volume International Encyclopaedia of Laws, this book provides ready access to legislation and practice concerning the environment in Singapore. A general introduction covers geographic considerations, political, social and cultural aspects of environmental study, the sources and principles of environmental law, environmental legislation, and the role of public authorities. The main body of the book deals first with laws aimed directly at protecting the environment from pollution in specific areas such as air, water, waste, soil, noise, and radiation. Then, a section

on nature and conservation management covers protection of natural and cultural resources such as monuments, landscapes, parks and reserves, wildlife, agriculture, forests, fish, subsoil, and minerals. Further treatment includes the application of zoning and land-use planning, rules on liability, and administrative and judicial remedies to environmental issues. There is also an analysis of the impact of international and regional legislation and treaties on environmental regulation. Its succinct yet scholarly nature, as well as the practical quality of the information it provides, make this book a valuable resource for environmental lawyers handling cases affecting Singapore. Academics and researchers, as well as business investors and the various international organizations in the field, will welcome this very useful

guide, and will appreciate its value in the study of comparative environmental law and policy.

Nuclear double beta decay is one of the most promising tools for probing beyond-the-standard-model physics on beyond-accelerator energy scales. It is already now probing the TeV scale, on which new physics should manifest itself according to theoretical expectations. Only in the early 1980s was it known that double beta decay yields information on the Majorana mass of the exchanged neutrino. At present, the sharpest bound for the electron neutrino mass arises from this process. It is only in the last 10 years that the much more far-reaching potential of double beta decay has been discovered. Today, the potential of double beta decay

includes a broad range of topics that are equally relevant to particle physics and astrophysics, such as masses of heavy neutrinos, of sneutrinos, as SUSY models, compositeness, leptoquarks, left-right symmetric models, and tests of Lorentz symmetry and equivalence principle in the neutrino sector. Double beta decay has become indispensable nowadays for solving the problem of the neutrino mass spectrum and the structure of the neutrino mass matrix — together with present and future solar and atmospheric neutrino oscillation experiments. Some future double beta experiments (like GENIUS) will be capable to be simultaneously neutrino observatories for double beta decay and low-energy solar neutrinos, and observatories for cold dark matter of ultimate sensitivity. This invaluable book outlines the development of double beta research from its beginnings until its most recent achievements, and also presents the outlook for its highly exciting future. *Environmental Law in Singapore* World Scientific

This up-to-date review also serves as an introduction to Heavy Quark Effective Theory (HQET) - a new approach to heavy quark physics problems in Quantum Chromodynamics (QCD). The book also contains a detailed discussion of the methods of calculation used in HQET, along with numerous illustrations.

Facade staining is a centuries-old building defect that is globally widespread. Millions of dollars are wasted annually for its rectification. A stained building looks old and worn-out, diminishing the value of the property and the confidence in occupying it. The facade's durability may also be affected by staining. Despite these wide and varying downstream implications, facade staining can actually be foreseen and prevented if conscientious efforts are made at the building's planning and design stages. This book provides insight into the underlying causes of facade staining and proposes an approach to address the root of the problem. It aims to raise awareness of crucial factors that should be understood and considered in the prevention or minimization of facade staining, hence reducing resource wastage in unnecessary maintenance work.

Staining of Facades will serve as a useful guide for students as well as practitioners in related professions such as architecture, engineering, building, real estate, and project and property management, in their efforts to minimize the life-cycle costs of buildings.

Physics Beyond The Standard Model - Proceedings Of The Fifth International Wein Symposium (Wein '98) Springer Science & Business Media

Containing the Proceedings of the Third International Conference on Physics Beyond the Standard Model, this book reports the latest experimental and theoretical results and ideas in this exciting field, at the interface between particle physics, astrophysics, and nuclear physics. Taken as a whole, this book presents an overview of the current status of the field and a valuable analysis of future trends in theory and experimental approaches across particle astrophysics. *Architectural Science Review* World Scientific

Addressing the need for an up-to-date reference on silicon devices and heterostructures, *Beyond the Desert 99* reviews the technology used to grow and characterize Goup IV alloy films. It covers the theory, device design, and simulation of heterojunction transistors, emphasizing their relevance in developing the technologies involving strained layers; device design and simulation of conventional silicon bipolar transistors and SiGe HBTs at room and low temperatures; and device design and simulation for MOSFETs, including SiGe and strained-Si channel MOSFETs. The book concludes with simulations and examples of different applications. It provides a unified reference for scientists and engineers investigating the use of SiGe and strained silicon in a new generation of high-speed circuit applications.

Elementary Particles and Their Interactions World Scientific

The first part of this two-part work is intended as an introduction to the fundamentals, while the second part discusses applications from the point of view of the researcher. Lively illustrations and informative tables, an overview at the beginning of each chapter and exercises with solutions make this book a valuable resource.

WEIN '98 focussed on searches for physics beyond the Standard Model of elementary particles at low and medium energies, including theoretical studies in these areas. In addition, selected topics in the physics of the Standard Model, searches for new physics at high energy facilities, and topics in nuclear and particle astrophysics were discussed. The conference was mainly composed of plenary talks reviewing the present status of the field. The proceedings include written versions of these plenary talks plus several invited talks given at the parallel sessions covering specific topics that could not be included in the plenary sessions.

The theoretical claims for eco-tariffs are rigorously analyzed within a unified framework formed of an international trade model enriched with both a domestic and a global externality. During the course of the analysis the model is modified to analyze an array of contexts for which eco-tariffs have been claimed to improve environmental quality or welfare. The circumstances and conditions are characterised under which such tariffs can be shown to improve environmental quality and social welfare, taking account of general equilibrium effects. The theoretical results are applied in a policy analysis of eco-tariffs and other trade instruments in the context of domestic and global environmental policy in order to assess the relevance of the eco-tariffs that have been subjected to the theoretical analysis. Finally, the GATT/WTO rules and regulations are presented, since to date these have banned the use of eco-tariffs. The rules and regulations are mapped against the theoretical results to show which rules ought to be changed.

This book focuses on spearheading the integration of maintainability, starting right from the design stage. To enable such integration, improving the knowledge of maintainability and setting

maintainability benchmarks are two key issues. These objectives are fulfilled with the development of a comprehensive defect library, a material manual and a maintainability scoring system. These tools serve to define acceptable standards in design and construction practices, thus enhancing long-term maintainability of facilities. Maintainability of Facilities: For Building Professionals aims to improve the standard and quality of design, construction and maintenance practices to produce efficient facilities that require minimum maintenance. The text covers technical issues related to maintainability of major components of a facility, and discusses the implications and selection of materials for high maintainability. The target readers are practitioners and students in architecture, engineering, building, real estate, construction, project management, facilities management, quantity and building surveying.

This book has been written by two experts in ventilation and indoor air quality with vast experience in the field of kitchen ventilation in both Asia and Europe. The authors share their extensive knowledge of the subject and present the results of their research programs as well those of other researchers. Discussing advanced theories of and design approaches for kitchen ventilation, it is a useful reference resource for a wide range of readers, including HVAC researchers, designers and architects.

The Singapore Convention on Mediation presents a comprehensive and insightful commentary on the Singapore Convention and the emerging field of the private international law of mediation. The Convention is just beginning its life as an international legal instrument. Recent years have witnessed the growing recourse to mediation as an alternative method of solving disputes in the sphere of international commercial and investment relations. How is it likely to fare? In this first comprehensive, article-by-article commentary, the authors provide a robust report on the features of the Convention and their implications, with analysis of potential controversies and authoritative clarifications of particular provisions. What's in this book: The book's meticulous examination considers the following issues and topics: - international mediated settlement agreements as a new type of legal instrument in international law; - types of settlement agreements that fall within the scope of the Convention; - how the Convention's enforcement mechanism works; - the meaning of

'international' and the absence of a seat of mediation; - the Convention's approach to recognition and enforcement of internationally mediated settlement agreements; - the grounds for refusal to grant relief under the Convention; - mediator misconduct as a ground for refusal to grant relief; - the impact of the Convention on private international law; - the relationship of the Singapore Convention with other international instruments such as the UN Model Law on International Commercial Mediation and the New York Convention on Arbitration; - possibilities for Contracting States to declare reservations. How this will help you: This book will be one of the first publications providing legal practitioners and other stakeholders with legal commentary on the Singapore Convention on Mediation. It informs readers of the legal implications and potential controversies associated with the Convention and offers much-needed clarifications on particular provisions This book takes a giant step towards relieving the inherent uncertainty associated with how this newly constituted instrument may operate, and how States may become 'Convention ready'. It is sure to become an essential reference for international lawyers, mediators and government officials as the Convention proves itself in the coming years.

This book constitutes the refereed proceedings of the 17th International Conference on Principles and Practice of Constraint Programming, CP 2011, held in Perugia, Italy, September 12-16, 2011. The 51 revised full papers and 7 short papers presented together with three invited talks were carefully reviewed and selected from 159 submissions. The papers are organized in topical sections on algorithms, environments, languages, models and systems, applications such as decision making, resource allocation and agreement technologies.

Safety and Health at Work Springer

This book takes a systems-thinking approach to allow readers to understand

how Workplace safety and health (WSH) is an integral part of any organisation. The different chapters are strung together by an overarching model of incident causation, and underpinning models are presented to allow a strong conceptual foundation. Practical WSH knowledge also discussed in relevant chapters to ensure that beginners have an introduction to the fundamentals of WSH hazards and controls. The second edition presents additional systems thinking concepts and archetypes not covered previously, the safe design process in Australia, thoughts on learning disabilities and safety culture, and additional case studies. Besides the strong emphasis on conceptual framework, readers will also be exposed to the details of a WSH management system and practical WSH processes, hazards and

controls. A series of online quizzes are available to readers to help them to reinforce the concepts of each chapter. Undergraduates and post-graduates will benefit from the systematic introduction to the foundations of WSH management. Practitioners will strengthen their conceptual understanding and widen their perspective by re-visiting the foundations of WSH management through a systems-thinking lens.

This volume provides a first systematic, comprehensive account of English in Southeast Asia (SEA) based on current research by leading scholars in the field. The volume first provides a systematic account of the linguistic features across all

sub-varieties found within each country. It also has a section dedicated to the historical context and language planning policies to provide a background to understanding the development of the linguistic features covered in Part I and, finally, the vibrancy of the sociolinguistic and pragmatic realities that govern actual language in use in a wide variety of domains such as the law, education, popular culture, electronic media and actual pragmatic encounters are also given due coverage. This volume also includes an extensive bibliography of works on English in SEA, thus providing a useful and valuable resource for language researchers, linguists, classroom educators, policy makers and anyone interested in the topic of English in SEA or World Englishes as a whole.
