Tank destroyers were the US Army's response to blitzkrieg, and were based around the concept of mounting a large anti-tank gun on a light, fast moving vehicle. They served in the Mediterranean, Pacific, and North-West Europe theatres, and were also supplied to other Allied armies. These vehicles form an attractive modelling subject; their open turrets provide plenty of opportunity for detail work, as demonstrated here by the author in clear step-by-step instructions. Packed with tips and techniques from a leading modeller and Allied armour expert, this title covers the M10, M18, M36, and M39, and features modelling projects in 1/35th and 1/72nd scale.

This book contains 20 papers from authors in the UK, USA, Germany and Austria. Historically, it gives examples of the influence of groundwater on battlefield tactics and fortress construction;

describes how groundwater was developed for water supply and overcome as an obstacle to military engineering and cross-country vehicular movement by both sides in World Wars I and II; and culminates with examples of the application of hydrogeology to site boreholes in recent conflicts, notably in Afghanistan. Examples of current research described include hydrological model development; the impact of variations in soil moisture on explosive threat detection and cross-country vehicle mobility; contamination arising from defence sites and its remediation; privatization of water supplies; and the equitable allocation of resources derived from an international transboundary aquifer.

Following in the best traditions of German ingenuity in design and construction of armoured vehicles, the SdKfz 251 firmly realised the concept of a competent cross-country tactical vehicle for armoured infantry units. So successful was this half-track that not only did a modified version of it remain in use with Czech forces well into the 1980s but also, ironically, the armoured infantry tactics that the Germans pioneered with it were adopted by Allied forces in the Second World War

and helped them to achieve the eventual defeat of Germany. This book covers the genesis and development of the SdKfz 251, and details the numerous modifications and variations that sprang from combat experience.

Modelling US World War II Armoured Fighting Vehicles Stackpole Books

Aimed at military model makers and wargamers who are interested in the armoured fighting vehicles of the United States as used throughout World War II, this book follows on from Modelling British World War II Armoured Vehicles by the same author. The book places its emphasis on US Army and US Marine Corps AFVs modelled mainly in 1/72 and 1/48 scales, in a deliberate departure from the more popular 1/35 scale, to encourage and inspire model makers who are new to or less familiar with these scales. Illustrated with over 270 colour photos this book features every major US AFV used in World War II, with many models shown in various stages of construction and paintings. It presents step-by-step guides demonstrating the painting techniques appropriate for different scales and includes an additional section showing how to paint wargames models. There is also a review of how the USA developed tanks and other armoured vehicles from the interwar period through to the end of World War II. This fascinating story will help model makers and wargamers give the vehicles they build an historical context.
