Christmas Notebook Gilded Orb Press
"Microcosmos is nothing less than the
saga of the life of the planet. Lynn
Margulis and Dorion Sagan have put it all
together, literally, in this extraordinary
book, which is unlike any treatment of
evolution for a general readership that I
have encountered before. A fascinating
account that we humans should be
studying now for clues to our own
survival."—From the Foreword by Dr.
Lewis Thomas *Microcosmos* brings
together the remarkable discoveries of
microbiology in the later decades of the
20th century and the pioneering
research of Dr. Margulis to create a vivid
new picture of the world that is crucial to
our understanding of the future of the
planet. Addressed to general readers,
the book provides a beautifully written
view of evolution as a process based on
interdependency and their
interconnectedness of all life on the
planet.

The New Noah, by Gerald Durrell

Independently Published

The classic work about meetings and decision-making. Meetings are a crucial part of all our lives, but too often they go nowhere and waste valuable time. In *Six Thinking Hats*, Edward de Bono shows how meetings can be transformed to produce quick, decisive results every time. The Six Hats method is a devastatingly simple technique based on the brain's different modes of thinking. The intelligence, experience and information of everyone is harnessed to reach the right conclusions quickly.

These principles have been adopted by businesses and governments around the world, ending conflict and confusion in favour of harmony and productivity. The Six Hats strategy will fundamentally change the way you work and interact. 'An inspiring man with brilliant ideas. De Bono never ceases to amaze with his clarity of thought.' Sir Richard Branson **Six Thinking Hats** University of Texas Press

God's Little Soldier From the backstreets of Bombay to the hallowed halls of Cambridge, from the mountains of Afghanistan to a monastery in California, the story of Zia Khan is an extraordinary rollercoasterride; a compelling cliffhanger of a spiritual quest, about a

goodman gone bad and the brutalization of his soul. Growing up in a well-to-do, cultured Muslim family in Bombay, Zia, a gifted young mathematician, is torn between the unquestioning certainties of his aunt's faith and the tolerant, easy-going views of his parents. At Cambridge University, his beliefs crystallize into a fervent orthodoxy, which ultimately leads him to a terrorist training camp in Afghanistan. The burden of endemic violence and killings, however, takes its toll on Zia. Tormented by his need for forgiveness, he is then drawn reluctantly to Christ. But peace continues to elude him, and Zia is once again driven to seek out causes to defend and fight for, whatever be the sacrifices involved. Posited against Zia is his brother, Amanat, a writer whose life is severely constrained by sickness, even as his mind is liberated by doubt. Theirs is a relationship that is as much a blood bond as it is an opaque wall of incomprehension. Weaving together the narratives of the extremist and the liberal, God's Little Soldier underscores the incoherent ambiguities of good and evil, and the tragic conflicts that have riven people and nations.

The Face of Spain SCHOLASTIC

Is our nature—as individuals, as a species—determined by our evolution and encoded in our genes? If we unravel the protein sequences of our DNA, will we gain the power to cure all of our physiological and psychological afflictions and even to solve the problems of our society? Today biologists—especially geneticists—are proposing answers to questions that have long been asked by philosophy or faith or the social sciences. Their work carries the weight of scientific authority and attracts widespread public attention, but it is often based on what the renowned evolutionary biologist Richard Lewontin identifies as a highly reductive misconception: "the pervasive error that confuses the genetic state of an organism with its total physical and psychic nature as a human being." In these nine essays covering the history of modern biology from Darwin to Dolly the sheep, all of which were originally published in *The New York Review of Books*, Lewontin combines sharp criticisms of overreaching scientific claims with lucid expositions of the exact state of current scientific knowledge—not only what we do know, but what we don't and maybe won't anytime soon. Among the subjects he discusses are heredity and natural selection, evolutionary psychology and altruism, nineteenth-century naturalist novels, sex surveys, cloning, and the Human Genome Project. In each case he casts an ever-vigilant and deflationary eye on the temptation to look to biology

for explanations of everything we want to know about our physical, mental, and social lives. These essays—several of them updated with epilogues that take account of scientific developments since they were first written—are an indispensable guide to the most controversial issues in the life sciences today. The second edition of this collection includes new essays on genetically modified food and the completion of the Human Genome Project. It is an indispensable guide to the most controversial issues in the life sciences today.
